POLICY STATEMENT:

This catalog contains the major points of the current agreement between the students and the Institution. Within this agreement, the institution reserves the right to make changes in course offerings, curricula, and other policies affecting its programs.

Due to the changing nature of professions, the institution is continuously reviewing and restructuring many of its academic programs in an effort to enhance their quality, improve efficiency, and to comply with requirements of professional boards, accrediting agencies, and governmental laws and regulations, among others. In that process, some of the programs and courses mentioned in this catalogue may be modified, consolidated with other programs and courses, or eliminated. **When the curriculum of any one program is revised, the institution will automatically initiate the transfer process of every student enrolled in said program to the revised curriculum but without increasing the number of credits required for the students to finish the program.**

If you have questions about a particular program of course, you should contact the appropriate university school or department. In case that a program is eliminated, the program director will prepare a course schedule to assure the graduation of those students enrolled in the program.

Revised: January 2019

UNDERGRADUATE PROGRAMS

OUR PROFILE

Universidad Ana G. Méndez-Recinto de Gurabo is a nonprofit institution of higher education located 15 miles southeast of San Juan, Puerto Rico, within easy reach of the entire east-central part of the island. Its 140-acre suburban campus and its fifteen buildings provide an ideal atmosphere for the learning experience. The university currently operates five (5) Additional Locations located in Barceloneta, Cayey, Yabucoa, Isabela, and Ponce, and five (5) US Branch Campuses three (3) in Florida, one (1) in Maryland and one (1) in Texas. It offers technical and professional certificates, associate, bachelor's, master's and doctoral degrees.

The academic system is organized into ten (10) main schools: School of Engineering, International School of Design and Architecture, Natural Sciences and Technology, Health Sciences, Social Sciences and Communications, Education, Business and Entrepreneurship, Technical Studies, the School of Continuing Education, School of Liberal Arts and General Education, and one (1) SUAGM systemic, the School of Professional Studies.

The General Education Deanship, now School of Liberal Arts and General Education (LASGE), was established to address the particular needs of new students admitted to the University. In addition to offering first-year and second-year courses in the General Education Component (GEC), the LASGE provides an array of support services to students in their first and second year.

Two other divisions that provide educational services to different populations are the School of Technical Studies, which offers post-secondary professional careers and associate degrees in technical fields, and the School of Professional Studies (AHORA), which serves adults who have had previous university experience, are full-time employees, and can benefit from an accelerated adult learner program at the undergraduate or graduate level. The School provides a university environment for the professional adult where the teaching methodologies, as well as the academic and administrative services are tailored to meet the genuine needs of this population.

It is a professionally oriented institution with a variety of offerings, from technical certificates to doctoral degrees. The institution serves a diversified student body mostly from the surrounding communities, with a variety of economic and educational backgrounds.

Founded in 1972, Universidad Ana G. Méndez-Recinto de Gurabo has continued to grow in the new millennium. The

student population of more than 15,000 is composed of young adults and professionals.

The academic staff consists of more than two hundred thirty-six (236) full-time faculty members and three hundred eighty (380) full-time equivalent professors. The full-time faculty members hold doctorates and master's degrees in their fields of expertise. Nearly sixty-four (64) percent of Universidad Ana G. Méndez-Recinto de Gurabo's full-time faculty hold a doctoral degree and thirty-nine (39) percent of part-time faculty holds a doctoral degree. The gender distribution of the faculty is equally divided. Universidad Ana G. Méndez-Recinto de Gurabo is a member of the Universidad Ana G. Méndez-Recinto de Gurabo System.

MISSION

Universidad Ana G. Méndez-Recinto de Gurabo is an institution of higher education with broad academic offerings of the highest standards of quality. Committed to excellence in teaching, research, innovation, internationalization, and social-humanistic values for a diverse academic population, Universidad Ana G. Méndez-Recinto de Gurabo forms global citizens with critical thinking skills which contribute to the development and well-being of Puerto Rico and other countries.

VISION

The vision of the Universidad Ana G. Méndez-Recinto de Gurabo is to be the leading educational institution in teaching and research, which promotes innovation, entrepreneurship, internationalization, and sensibility towards cultural diversity and the environment.

INSTITUTIONAL VALUES STATEMENT

Universidad Ana G. Méndez-Recinto de Gurabo is committed, as an institution of higher education, to:

1. Freedom of thought and expression
2. Excellence in teaching and the pursuit, generation, dissemination and application of knowledge
3. Respect the dignity of the individual
4. Respect nature and the environment
5. Promote ethical, social and cultural values
6. Recognize and respect diversity
7. Promote institutional excellence in planning, operations and service
8. Promote human and esthetic sensibility.

INSTITUTIONAL OBJECTIVES

To fulfill its mission, Universidad Ana G. Méndez-Recinto de Gurabo:

1. Maintains a flexible admissions policy in which each academic school establishes requirements for its programs.
2. Provides services to a diversified student body to help it achieve academic and personal goals.
3. Fosters research to strengthen the teaching and learning processes as well as to improve the quality of life in the surrounding communities.
4. Promotes the internationalization of its academic programs through strategic alliances.
5. Develops and implements a systematic faculty development plan to improve academic credentials, pedagogical competencies and instructional technology skills.
6. Recruits and develops quality human resources.
7. Provides academic skills and career-oriented activities to precollege students, as well as opportunities for continuing education, thus fulfilling the needs of the community.
8. Promotes the use of innovative and nontraditional teaching methodologies.
9. Promotes ethical values that will allow students to exert their professional judgment and performance responsibly.
10. Fosters the preservation and dissemination of those values inherent to Puerto Rican culture in a global context.
11. Establishes collaborative partnerships among universities, government, industry, and community organizations.
12. Contributes to students' awareness of their rights and responsibilities as citizens in a democratic society.

CENTRAL ADMINISTRATION AND BOARD OF DIRECTORS

The Sistema Universitario Ana G. Méndez, Inc. (SUAGM) is a not for profit private corporation established under the laws of the Commonwealth of Puerto Rico. It is comprised of four (4) academic institutions, one (1) non commercial private TV Station for public broadcasting, and a Central Administration, under which all administrative affairs of the institution are managed by a President/CEO Universidad Ana G. Méndez-Recinto de Gurabo is one of the four (4) academic institutions.

A thirteen (13) -member board of trustees governs the System. Of these, five (5) are permanent members. The other eight (8) members are elected by the board for two term periods of two (2) years each, and two periods of four-

(4) years, that add up to a maximum of 12 years of service in the board. The board members are distinguished professionals who represent different career paths and fields of work, and/or civic and community leaders.

The chief executive officer (CEO) of SUAGM is the President, and there is also an Executive Vice President. Each of the administrative and academic components has its own CEO. Thus, the Central Administration units are led by Vice Presidents for: Planning and Academic Affairs, Marketing and Student Affairs, Finance Affairs, Administrative Affairs, Human Resources, National Affairs, and International Affairs. There is also a Vice President and General Manager of Sistema TV., the only non academic institution. The other institutional officers are the Chancellors of the four academic institutions, which are: Universidad Ana G. Méndez-Recinto de Gurabo, Universidad Ana G. Méndez-Recinto de Cupey, Universidad Ana G. Méndez-Recinto de Carolina, and UAGM Recinto Online. A fifth Chancellor manages the operation of all the academic institutions established in Florida, USA. All Chancellors and Vice Presidents respond directly to the President/CEO, who appoints them.

The System's bylaws define the objectives, powers, officers, committees, meetings and the general handling of the financial affairs of the institutions. The Governing Manual describes the way in which the Board of Directors governs all institutional affairs. The Institutional Bylaws specify the way in which each one of the autonomous institutions will be operated and administered.

The Board is the policy-making, legislative and fiscal oversight body of the System. In addition to appointing the President, the Board is responsible of all corporate affairs and control of the corporation. It approves the institutional mission and vision, the strategic and long range institutional plans, and its annual and special budgets. The President/CEO, who is also a Board member, is directly responsible to the Board for the administration of all corporate business; including the appointment of VPs and institutional officers; personnel administration and compensation; and recommendation to the Board of academic programs and long-range institutional plans.

The Board has four working committees:

Government
Academic and Student Affairs
Finance
Audit

Tania J. Maldonado / Acting Director, Veterinary Technology Program

School of Natural Sciences and Technology

Teresa Lipsett-Ruiz / Dean
Ileana González / Associate Dean
María F. Barberena / Director, Department of Biology
José J. Ducongé / Director, Department of Chemistry and Physics
José Sánchez / Director, Department of Mathematics
Mayra Cummings / Director, Medical Technology
Sandra Ayala / Laboratory Manager
Luz N. Trinidad / Director of Administrative Affairs
Ivelisse Díaz-Alejandro / Director of Student's Affairs
Ilianex Oquendo / Academic Adviser

School of Social Sciences and Communications

María del C. Santos / Dean
Tomasita Pabón / Associate Dean, Social Sciences Department
Edward Fankhanel / Associate Dean
María M. Ortiz / Director, Social Work Department
María Vera / Director, Communications Department
Jessica Velázquez / Director, Psychological Services Clinic
Rosa Rodríguez / Administrative Director

International School of Design and Architecture

Aurorisa Mateo / Dean
Elizabeth Castrodad / Associate Dean for Academic Affairs
Rosa Musí / Associate Dean for Administrative Affairs

María Gabriela Flores Kearns / Director, Architecture Department
Ana Rebecca Campos / Director, Fashion Design Department

School of Professional Studies

Mildred Y. Rivera / Assistant Vice-President and Dean
Erick Vázquez / Acting Associate Dean
Mabelis Viera / Director, Integrated Services
Jocelyn Gómez / Academic Director

School of Technical Studies

María E. Flores / Dean
Irving A. Colón / Academic Director
Amarilys Rivera / Academic Affairs Coordinator
Norberto Pagán / Academic Advisor
Charlotte Pérez / Student Services Coordinator
María de los A. Rodríguez / Administrative Services Coordinator

School of Public Security Institute

Jhon Sanabria / Assistant Vice-President and Dean
Ángel M. Guzmán / Associate Dean
Wanda Rodríguez / Director
Ángel R. Ramírez / Director, Administration

Information Resources

Sarai Lastra / Vice Chancellor of Information Resources and Director Virtual Library
Luis A. Arroyo / Director, Information Technologies
José Medina / Director, Informatics and Telecommunications
Luisa Torres / Director of the Library
Julie Malavé / Director, Administrative Services

Off-Campus Centers

Glenda L. Bermúdez / Director, Off-Campus Center Yabucoa
Juan A. Rosado / Director, Off-Campus Center Cayey
Carmen L. Rivera / Director, Off-Campus Center Isabela
Sigfredo Morales / Director Off-Campus Center Ponce
Ramón E. Díaz / Director Off-Campus Center Barceloneta

Student Affairs

Brunilda Aponte / Vice Chancellor of Student Affairs
Juanita Cruz / Associate Vice Chancellor of Student Affairs
María V. Figueroa / Associate Vice Chancellor of Student Affairs
Samiris Collazo / Assistant Vice Chancellor for Wellness and Quality of Student Life
Carmen Pulliza / Assistant Vice Chancellor, Career and Placement
Zoraida Ortiz / Registrar
Melba Sánchez / Associate Vice-Chancellor of Admission and Marketing
Carmen J. Rivera López / Director, Financial Aid
Gabriel López / Bursar
Wilnelia Hernández Castro / Director Information Systems
Luz E. Berríos / Nurse, Health Services
Ángel Vázquez / Director, Social and Cultural Activities
Eva Merced / Administrative Director
Dirree Y. Rodríguez / Director, Admissions
Anabelle Solá / Director, Recruitment

Physical Facilities, Operations and Maintenance

Mayra Rodríguez / Operations and Physical Facilities Manager

Francisco Caballero / Assistant Manager of Physical Facilities
Julio Colón / Assistant Manager, Administrative Services
Carlos R. Centeno / Director, Security
Rubén Monsanto / Maintenance Supervisor

Statement of Legal Control

The SUAGM is a private nonprofit corporation registered under the laws of the Commonwealth of Puerto Rico. Its Board of Directors under the system wide bylaws governs the corporation.

Non-Discrimination Statement

The SUAGM and its institutions do not discriminate on the basis of race, handicap, national or ethnic origin, creed, color, gender, social condition or political, religious, social or trade union beliefs.

LEGISLATIVE BOARDS

The Administrative Council of Universidad Ana G. Méndez-Recinto de Gurabo is the legislative body of the Institution. Its main function is to establish the institutional policy of the University in accordance with the bylaws of the SUAGM. The Administrative Council includes the chancellor, who chairs it, the vice chancellor, the vice chancellor of student affairs, the manager of physical facilities and operations, the deans of the academic divisions, one (1) faculty representatives for each school, two (2) directors representatives of university centers and two (2) student representatives.

The Academic Board recommends the academic policy of the Institution, adopts new academic programs, approves the awarding of degrees and evaluates hiring, contract renewals, promotions, and leaves of absence for faculty members.

The Academic Board consists of the vice chancellor, the library director, nine (9) school associate deans, two (2) student representatives, one (1) faculty representative for each school, and as many elected faculty members as needed to provide for their majority on the board. The chancellor is an ex officio member of the Academic Board.

Established in 2003, the Center for Graduate Studies and Research (CGSR) is an administrative unit whose main responsibility is to provide resources and support services for graduate students who wish to pursue doctoral studies. Through workshops, seminars and conferences, the Center contributes to the University's image of academic excellence and leadership. The CGSR also promotes scholarly research among students and faculty.

The CGSR is located in the Science and Technology Building and is directed by the Associate Vicechancellor (AV) for Graduate Studies and Research. The AV interacts with all the UT Schools and their respective coordinators of doctoral programs. In this way, the CGSR and the coordinators work together to ensure that all doctoral students are well attended and supported.

MISSION

The CGSR is devoted to the advancement of knowledge through research activities and to the establishment of ideal support conditions for UT doctoral students. The Center also collaborates with the six UT Schools to stimulate and enhance academic and scientific experiences.

VISION

The CGSR is a key facilitation agent that promotes excellence through academic and leadership opportunities for graduate students by encouraging the development of research activities.

SUPPORT SERVICES

The CGSR is actively involved in the recruitment, retention and graduation of doctoral students at UT. To this end, the Center provides assistance from the initial application stages to the completion of a doctoral degree. Hence, the Center supports the following initiatives:

- Academic advising
- Areas for group study
- National and international conferences
- Research a UT recognition program
- Teaching assistants program

- Research programs
- Individualized services for registration and financial aid
- Orientation on the financial aid process
- Detailed information on doctoral programs
- Professional development seminars
- Resource room for doctoral students

Ultimately, the CGSR is a clearinghouse of information and resources to ensure the graduate students' successful completion of an advanced degree while enhancing their personal, social, academic and professional experiences.

RESEARCH INSTITUTES

PUERTO RICO ENERGY CENTER (PREC)

The Puerto Rico Energy Center is an R&D facility in solid waste disposition and renewable energy. The technological areas of the center are plasma gasification and vitrification, photovoltaic solar cells, and fuel cells. The center will be available for demonstrations of potential applications benefiting municipalities, the pharmaceutical industry, and other private and public partners, helping to promote R&D efforts and business development. It provides education, awareness, and technical assistance activities on renewable energy, with a particular interest in environmentally friendly solid waste treatments.

Under the leadership of the Dean of the School of Engineering, PREC concentrate its efforts on the implementation of the project's first phase activities:

- Construction of new PREC facilities
- Development of Cruise Ship Solid Waste Disposal Prototype
- Establishment of initial research activities related to:
 - Residue Composition Analysis
 - Hydrogen Production
 - Fuel Cell Laboratory activities

ACT GLOBAL

ACT Global is a Technology Accelerator of SUAGM, Inc.d/b/a Universidad Ana G. Méndez-Recinto de Gurabo, Inc. created with the principal goal of generating businesses and ventures by means of providing the technical ecosystem for entrepreneurs to transform their well-conceived ideas into marketable products through the acceleration program **Startup.pr**.

The ecosystem provided by Startup.pr Acceleration Program consists in access to laboratories, highly specialized prototyping equipment, technical support and access to the Schools of Engineering, Natural Sciences and International Design and Architecture, as well as other schools as needed,

of Universidad Ana G. Méndez-Recinto de Gurabo providing startups the next level of development and a way to escalate to a global market.

MISSION

Provide technical ecosystem and financial assistance to accelerate innovative and technology-based early stage companies as a contribution to Puerto Rico growth initiatives.

VISION

Be the epicenter of the development of technology-based solutions with global impact in Puerto Rico.

IMPORTANT NOTE:

This catalog contains the major points of the current agreements between the students and Universidad Ana G. Méndez-Recinto de Gurabo. The University limits its agreement to the semester or session in which the student is duly enrolled and for which (s)he has paid the corresponding fee.

ADMISSIONS

GENERAL ADMISSION REQUIREMENTS

Students candidates applying for admission to Universidad Ana G. Méndez-Recinto de Gurabo must meet the following requirements:

1. Graduate from secondary school licensed by the Puerto Rico Council on Education or its equivalent.
2. Have taken the The University Admissions and Assessment Tests (PEAU) of College Entrance Examination Board (CEEB) or the placement test in the areas of Spanish, English and Math provided by the University.
3. Some Schools may have other specific program requirements. Refer to School's section in the Catalogue for more information. Evidence of complaints with these additional requirements must be submitted to the School to which the student is applying to admission.

Admission requirements vary between specific colleges and programs. Visit the following link form more information: <http://ut.suagm.edu/es/admisiones-mercadeo/requisitos-de-admision>.

HIGH SCHOOL STUDENTS

ADMISSION PROCESS AND DOCUMENTATION

High school students in their senior year can submit the admission application and provide evidence of their cumulative grade point average (GPA) (computed at the end of the first semester of the senior year) and their University Admissions and Assessment Tests (PEAU) of College Entrance Examination Board (CEEB), SAT or ACT test results.

Students in their junior year of high school can start an early process by filling in the admission application and providing evidence of their cumulative GPA computed at the end of the second semester of their junior year.

To complete the admissions record process, all applicants must provide the required documentation listed below:

1. Fill and submit the admission application and pay the non-refundable fee.
2. Submit a copy of the University Admissions and Assessment Tests (PEAU) of College Entrance Examination Board (CEEB), SAT or ACT results (if (Institution) was not selected to receive results directly) or take the placement test in the areas of Spanish, English and Mathematics provided by the university.
3. Health and vaccination certification for applicants younger than twenty-one (21) years of age.
4. Submit one of the following as part of the evidence for program-specific requirements:
 - a. Students from the public schools system that provide student GPA via an electronic system recognized by the Department of Education of Puerto Rico, will not need to present physical evidence of the transcript. The electronic transcript sent by the school must show the academic GPA computed at the end of the first semester of the senior year of high school, to be evaluated as part of the admission process.
 - b. Students from public and private schools that do not provide the electronic service data transfer recognized by the Department of Education of Puerto Rico, must provide an official transcript comprising their high school years up to the first semester of the senior year of high school, to be evaluated as part of the admission process.
5. All candidates must submit one of the following documents as evidence of having completed high school or its equivalent:
 - a. Original Certification of graduation
 - b. Official document of an institution or agency recognized by the U.S. Department of Education that certifies the equivalency of a high school degree.

Students must present evidence of high school completion or its equivalent before the first day of class or within 20 days after the beginning of classes. The institution may invalidate the student's admission if this requirement is not met. Veterans and beneficiaries must also submit all admission requirements before the first day of class or within 20 days after the beginning of classes.

ADMISSION FORMULA

Some schools apply the Admission Index formula. It is computed using the results of the following areas of the University Admissions and Assessment Tests (PEAU) of College Entrance Examination Board: verbal aptitude, mathematics aptitude and English achievement. The high school grade point average is also considered.

PLACEMENT EXAMS: ENGLISH/SPANISH/MATHEMATICS

1. Incoming first-year students who do not have their test results from the College Board, MUST take the UT placement exams. Information about when and where the tests are offered is provided by the Vice Chancellory of Retention and Student Development.
2. The placement exams are used to assess student performance and proficiency in Spanish, English, and Mathematics. The scores of these tests are used to place students in courses that are appropriately challenging.
3. Students with Advanced Placement College Board Scores of 3 or higher in Spanish, English or Mathematics are exempt from taking the corresponding placement exam and are placed in the subsequent sequential course.
4. If you are a transfer student, and your transcript has been evaluated by your admitting college (School), at the discretion and approval of the Office of the Registrar and the corresponding School, you may receive credit for a particular English/Spanish/Mathematics course that you have taken at another institution. If you are awarded transfer credit, your college (School) will advise you regarding the next English/Spanish/Mathematics course you may need to take.
5. If you are a transfer student who has NOT been given transfer credit for an English/Spanish/Mathematics course, you will need to take the corresponding placement exam.
6. Students who have not taken English/Spanish/Mathematics at the university level, MUST take the UT placement exam(s) before enrolling in any English/Spanish/Mathematics course.

READMISSION

1. Students must apply for readmission if they interrupted their studies and did not attend the university for one semester or longer. (Summer sessions do not count as interruptions.)
2. Students must complete the required number of credits for their **year of study**.
3. Students must comply with the requirements of the study program of their choice as well as other general requirements that may apply.
4. In order to be readmitted, the period of suspension for academic or disciplinary reasons must have elapsed.
5. Candidates for readmission may be required to have an interview with the Admissions Committee. It is comprised of the Vice Chancellor of Student Affairs or his representative, the Director of Admissions, the Vice Chancellor for Wellness, the Registrar, the Vice Chancellor or his representative and the dean of the school. In special cases, the Committee will have the final authority to determine admissions.

TRANSFER STUDENTS

Transfer students are considered for admission if they have followed a course of study in an accredited university and have completed no fewer than 12 credits in the institution from which they proceed. Their grade point average (GPA) must be the institutional minimum requirement. The students must not be under academic or disciplinary sanction in the institution from which they proceed.

In order to be admitted, students wishing to transfer must meet the requirements of the program of their choice.

In some cases professional accreditation agencies require that concentration or specialization courses are approved in a program accredited by the same agency. Specific information may be provided by the Admissions Office.

COURSE VALIDATION

Transfer students have the option of validating courses taken no more than 12 years prior to admission for equivalent courses offered at Universidad Ana G. Méndez-Recinto de Gurabo. The students must have a minimum grade of C in each course.

ADVANCED PLACEMENT TEST

Credit will be granted for the Advanced Placement Tests of the College Entrance Examination Board if the score obtained is 3 or more, on a scale of 1 to 5.

PRE-COLLEGE COURSES

Credit will be granted to students for courses offered by Universidad Ana G. Méndez-Recinto de Gurabo at the high school level. These courses must be in addition to those required for graduation and must be approved with a grade of A, B or C. The various schools will establish the grades required in the courses to be credited.

The Pre-College Program will keep record of the student's progress and will send evidence of the completed courses to the Registrar's Office, after the student is officially admitted to the University. This documentation will become part of the student's file.

RESIDENCE

All transfer students must observe the following rules to obtain residence at the University in order to qualify for graduation:

1. Complete the last (30) thirty credits of their bachelor's degree at Universidad Ana G. Méndez-Recinto de Gurabo, (12) of which must be in their major field of study.
2. Successfully complete the last twelve (12) credits of the associate degree at Universidad Ana G. Méndez-Recinto de Gurabo.
3. Twelve (12) credits of residence (set by each program) will be required of students from Off-Campus Centers.

TRANSIENT STUDENTS

Transient students must be authorized by their own university to take courses at Universidad Ana G. Méndez-Recinto de Gurabo for no longer than two academic semesters.

Universidad Ana G. Méndez-Recinto de Gurabo admits visiting students or auditors. They must apply for admission within the time limit established by the Admissions Office. They must attend their regular courses but will receive no credits or grades. These students are not eligible for financial aid.

Authorization for enrollment of transient students and auditors does not constitute a formal admission into the institution, and it terminates at the end of the academic session for which it was granted. To obtain regular student status, students must comply with the admission requirements in force at the time when the application for admission was filed. All applications are subject to an interview by the Admissions Committee.

INTERNATIONAL STUDENTS

Universidad Ana G. Méndez-Recinto de Gurabo accepts foreign students as permitted by immigration laws. Foreign students are subject to the admission, readmission and transfer requirements established by the Universidad Ana G. Méndez-Recinto de Gurabo.

Online and out of state students are part of international student component for internal purpose. However, online students do not have to comply with the same immigration laws.

ACADEMIC YEAR

The academic period is divided into two semesters and one summer, which in turn can be subdivided into smaller sessions called terms.

EFFECTIVE DATES

Admission or readmission at Universidad Ana G. Méndez-Recinto de Gurabo will be valid for one semester of the academic year, beginning on the date it is granted. Applications that do not include the required documents, or that do not meet all the established requirements, will be considered provisional. If all the documents are not received within 60 days from the first day of class, the institution may invalidate the provisional admission.

Applications forms should be requested from:

UNIVERSIDAD ANA G. MÉNDEZ-RECINTO DE GURABO
ADMISSIONS OFFICE
P O BOX 3030
GURABO PR 00778
TELEPHONE: (787) 746-3009
Or visit web:
<http://ut.suagm.edu/es/ut/solicita-admision> or
www.solicitaadmision.com

TUITION AND SPECIAL FEES

Once a year the Office of the Vice President of Financial Affairs publishes a circular letter with information about tuition costs for all academic programs, and special fees for student services at Universidad Ana G. Méndez-Recinto de Gurabo. Upon request, this document is available at the Bursar's Office to students and to anyone in the institution who requests it.

Tuition, fees and service charges must be paid in full during registration or at the time the student requests services. Payments can be made in cash or by check, money order,

debit cards or credit cards. Receipts for all transactions must be requested and retained, and presented with any claim or request for adjustment. The Bursar's Office will not accept claims without receipts.

In accordance with established rules and regulations of the institution, the SUAGM may amend standards and tuition fees.

The Deferred Payment Plan is available to parents, tutors or adult students who do not receive financial aid. The recipient will sign a promissory note and payments will be made on or before the specified date on the promissory note. If the University is forced to contract legal or collection services in order to collect, the student will pay the legal and/or agency fees.

CLEAR STATEMENT

Students with an outstanding debt balance will not be allowed to take final examinations until such balance is paid in full. Upon receipt of payment, the Bursar's Office will issue a Clear Statement, which must be presented by the student at each examination. Students who do not comply with this requirement will receive a grade of Incomplete.

ADJUSTMENTS AND REFUNDS

Active students who request total withdrawal before 60% of the registration period has ended will receive an adjustment in the fees and assigned funds in accordance with federal regulations for programs with Title IV funds. In addition, students identified as NA (not attending) a course will be charged a 25% fee for each course in which they enrolled. These fees will not be covered by federal funds. During the add/drop course adjustment period, students can add or drop sections without additional cost.

FINANCIAL AID

Universidad Ana G. Méndez-Recinto de Gurabo makes every effort to help its students obtain government financial aid for those who are unable to begin or continue their university education without such aid. There are three categories of financial aid: scholarships, loans and work-study programs.

SCHOLARSHIPS

Scholarships are granted according to the educational and financial needs of the student. Only undergraduate students are eligible to receive funds through Pell Grants. However, a Free Application for Federal Student Aid (FAFSA) application

is needed to determine the student's eligibility for other federal aid programs.

STATE FUNDS

The Council of Higher Education of Puerto Rico provides funds to supplement the cost of graduate education. This aid applies to all students who are eligible according to the student's eligibility index provided by the FAFSA evaluation.

FEDERAL DIRECT LOANS

The Financial Aid Office will recommend and process the loan directly to the U.S. Department of Education in its electronic form. This loan must be repaid in cash; the repayment should begin six (6) months after the student graduates or ceases to study. The Federal Government will pay the interest while the student is enrolled in a recognized post-secondary institution. Borrowers should check the interest rate on their promissory note. The variable rates do not exceed 8.25 percent.

WORK-STUDY PROGRAM

This program provides jobs for undergraduate and graduate students. The Financial Aid Office assigns a specific amount of hours that the student works on campus.

FINANCIAL AID APPLICATION AND RENEWAL

Students who have participated in the financial aid program during the first term do not need to renew their financial aid program during the same academic year if they comply with the requirements for continuing in the program. Financial aid must be requested through the FAFSA form on the Web at: www.fafsaontheweb.com or visit the financial aid office.

UNIVERSIDAD ANA G. MÉNDEZ-RECINTO DE GURABO

FINANCIAL AID

P O BOX 3030

GURABO, PUERTO RICO 00778

Or visit web:

<http://ut.suagm.edu/es>

The FAFSA includes the list of requirements and documentation necessary to apply for financial aid.

CREDIT HOUR DEFINITION

At Universidad Ana G. Méndez-Recinto de Gurabo (AGM) course work is measured by means of a credit hour unit,

which reflects the amount of time spent in class, and the amount of outside preparatory work expected for the class. Thus, looking for consistency and transferability within and between institutions, UT conforms to commonly accepted practices in higher education. The Institution adopts and apply a policy on credit-hours consistent with the US Department of Education definition of "credit hour" as:

"...An amount of work represented in intended learning outcomes and verified by evidence of student achievement that is an institutionally established equivalency that reasonably approximates not less than:

- (1) One hour of classroom or direct faculty instruction and a minimum of two hours of out-of-class student work for approximately fifteen weeks for one semester or trimester hour of credit, or ten to twelve weeks for one quarter hour of credit, or the equivalent amount of work over a different amount of time; or,
- (2) At least an equivalent amount of work as required in paragraph (1) of this definition for other academic activities as established by the institution, including laboratory work, internships, practica, studio work, and other academic work leading to the award of credit hours."

IMPORTANT NOTE

The above-mentioned aid is conditioned to the availability of the respective federal, state and institutional funds. It is the student's responsibility to take the steps necessary to obtain financial aid from the government. Such aid is directed to the student as a citizen and not necessarily to the University. Universidad Ana G. Méndez-Recinto de Gurabo is a private, secular, nonprofit institution, and is independent of any government.

The institution fully complies with the Privacy Rights of Parents and Students Act of 1974 (Title IV of the U.S. Public Law 90-247), as amended, which specifically governs access to records maintained by institutions to which funds are made available under any federal program for which the U.S. Commission of Education has administrative responsibility, and the release of such records. Such institutions must give parents of students access to official records that are directly related to the students and an opportunity for a hearing to challenge such records on the grounds that they are inaccurate, misleading or otherwise inappropriate.

Institutions must obtain the written consent of parents before releasing or relinquishing data with personal identification from the student records, except to certain specified parties; that parents and students must be notified of these rights; that these rights transfer to students at certain points; and that an office adjudicate complaints and violations of this law.

In order to receive financial aid, students must comply with the Satisfactory Academic Progress Policy.

ACADEMIC REGULATIONS

SATISFACTORY ACADEMIC PROGRESS (SAP) POLICY

Satisfactory Academic Progress (SAP) measures the academic progress of the student towards the attainment of an academic credential. Federal regulations require that all students who receive Title IV funds as part of their financial aid package maintain SAP. The SAP policy applies to all students within categories, e.g., full-time, part-time, undergraduate, and graduate students.

The evaluation criteria for SAP include a qualitative and quantitative component.

The qualitative measure is based on the cumulative grade point average (GPA). The quantitative measure is based on the number of credit hours the student attempts and earns. This calculation is completed by dividing the cumulative number of credit hours a student successfully earns by the total number of credit hours the student attempts over the student's academic career in a particular program at the Institution. Students are also expected to complete their program within 150 percent (%) of the length of the program as measured in credits.

MAINTAINING SATISFACTORY ACADEMIC PROGRESS

The academic progress of students enrolled in associates, bachelors, masters and doctorate degree programs will be assessed at the end of every two (2) semesters. The academic progress of students enrolled in technical and postgraduate certificate programs will be assessed at the end of each semester. The Registrar's Office will notify students in writing, through e-mail, of their academic status.

Students are prohibited from receiving federal student financial aid after attempting 150% of the number of credits required for their academic program. This calculation includes all attempted credits, including transfer credits, related to the student's academic program.

To maintain good standing, students must comply with the following:

QUALITATIVE COMPONENT

The Institution establishes specific minimum GPA requirements by program level (i.e., certificate, associate, bachelor, master and doctorate). The minimum GPA increases as credits attempted increase. Students enrolled in a program of more than two academic years must have a GPA of at least a "C" or its equivalent. Regardless of the

student's enrollment status, the Institution considers that a student is at the end of his/her second academic year after two calendar years of attendance (i.e. four semesters, excluding the summer term).

Refer to Appendix, Satisfactory Academic Progress Tables, for the qualitative components per program level.

QUANTITATIVE COMPONENT

The Institution uses a graduated completion percentage by program level. The student must earn the minimum percentage of attempted credits depending on the program level and academic year in which the student is enrolled.

All credits attempted and earned, including transfer credits that count towards the program of study of the student, are considered in the calculation.

The student must complete the program within 150% of the length of the program of study to be eligible for Title IV funds. For example, students in a bachelor's degree program must complete 120 credits and may attempt up to 180 credits ($150\% \times 120 = 60$; $60 + 120 = 180$).

Refer to Appendix, Satisfactory Academic Progress Tables, for the quantitative components per program level.

If a student wants to enroll in a different academic program, the student must request approval from the Dean of the School. Even though only attempted and earned credits from the student's current program of enrollment are included in the quantitative measure and only the grades for courses from the student's current program of enrollment are included in the qualitative measure, students are encouraged to carefully consider program changes because federal regulations limit total lifetime financial aid eligibility.

Students who discontinue their studies and subsequently apply for readmission will be readmitted under the current SAP policy and will have the same SAP status that resulted as of the end of the last term attended. Students applying for readmission must fill and submit the admission application and pay the non-refundable fee. Admission Office will evaluate the student by SAP. If the student does not meet SAP, the University will determine if he/she may be readmitted, provided an appeal has been approved.

Students requesting admission into a new academic program after having completed his/her prior program of study will have to fill and submit the admission application and begin the new program with a new SAP history, unless the student transfers credits into the new academic program in which case those transfer credits will be considered when measuring SAP.

Impact of Course Repetitions, Withdrawals, Incompletes and Transfers on Satisfactory Academic Progress

- **Course Repetitions** - Federal regulations limit repetition of courses that can be paid with Title IV financial aid funds. Please check with the Financial Aid Office if you are not sure whether a course can be repeated with financial aid. If a student repeats a course, only the highest grade earned will be included in the student's cumulative GPA. However, each attempt at the course will count as credits attempted.
- **Withdrawals** - If a student withdraws from a course, the credits for the course count toward the determination of credit hours attempted but will not be considered in the cumulative GPA.
- **Incomplete Courses** - If a student has an incomplete in a course, the credits for the course count towards the determination of credit hours attempted. The course will not be considered in the cumulative GPA until a grade is assigned.
- **Transfer Credits** - If a student transfers in credits from another institution, the accepted credits for the courses count toward the determination of credit hours attempted and earned, but will not be considered in the cumulative GPA. Only those transfer credits that apply to the student's program of enrollment at the Institution will count as credits attempted and earned. Refer to the Institution's catalog for requirements on accepted transfer credits from another institution.

DEVELOPMENTAL COURSES

Financial aid recipients may receive aid for a maximum of 30 semester credit hours in developmental coursework. Students enrolled in developmental courses are expected to receive passing grades in those courses in order to progress into the next term. Developmental courses count towards the determination of credit hours attempted and earned and will be considered in the cumulative GPA when determining SAP.

Financial Aid Warning and Failure to Meet Satisfactory Academic Progress

Students enrolled in technical and postgraduate certificate programs, for which SAP is evaluated at the end of each semester, will be placed on financial aid warning status for the next semester attended as a consequence of not making satisfactory progress. The Institution uses this status without appeal or any other action by the student. The Registrar's Office will notify the student in writing, through e-mail, of the financial aid warning status and that financial aid eligibility is retained during this period.

The student must meet SAP as of the next evaluation point (by the end of the next semester attended) in order to receive financial aid in future terms. Students who did not meet SAP as of the next evaluation point become ineligible for federal financial aid funds and may continue their studies at the Institution at their own cost. If the student believes there are extenuating circumstances associated with the student's inability to meet SAP, he/she may appeal his/her termination status to the Appeals Committee. See section titled Financial Aid Ineligibility and Appeal Procedures below.

SCHOLARSHIP AND GRANT RECIPIENTS

Other scholarship and grant programs may not allow for a financial aid warning semester. In these cases, failure to meet SAP in any given term may result in the termination of scholarship or grant funds. Please refer to your scholarship or grant information materials or contact the Financial Aid Office at 787 743-7979 extension 2352.

FINANCIAL AID INELIGIBILITY AND APPEAL PROCEDURES

A student will be advised in writing, through e-mail, when he/she has lost financial aid eligibility due to the failure to meet SAP and will be advised of the process for re-establishing financial aid eligibility. Students who have lost eligibility for financial aid based on a failure to meet SAP standards may appeal their loss of eligibility if they have suffered extenuating circumstances, such as the following:

- Student's injury or illness,
- Death of a relative, or
- Other special circumstances.

Students may not use financial aid to make retroactive tuition and fee(s) payments.

As part of the request for an appeal, the student must present how the critical situation prevented him/her from meeting the academic progress. The student must also describe how his/her situation has changed in order to allow the student to meet the SAP standards at the next evaluation. As part of the appeal, the student must submit the following:

- SAP Appeal Form (please refer to the form for further instructions)
- Signed dated letter
- Supporting documentation (third-party documentation may be required as appropriate)

In order for the appeal to be considered, the student must submit the SAP appeal documentation to the Institution's Professional Counselor, who will submit the documentation to the Appeals Committee. The Appeals Committee will

evaluate the merits of the appeal by reviewing the documentation submitted as well as the student's previous academic performance at the Institution. The Appeals Committee may request additional information or documentation, as needed. The Vice Chancellor for Student Affairs will notify the student in writing, through e-mail, the determination made by the Appeals Committee.

The student must submit an appeal to the institution in writing after the receipt of the failure to meet SAP notification. The Institution will have ten (10) calendar days for the evaluation process after receiving the student's appeal documentation.

FINANCIAL AID REINSTATEMENT

If the Institution approves a SAP appeal, the student will be placed on financial aid probation for the next semester attended. The student may also be placed on an academic plan. The Institution will advise the student in writing of the progress the student must achieve to ensure he/she meets the SAP policy or the requirements of the academic plan by the end of the next semester attended. Students will be eligible for financial aid while on financial aid probation.

After the end of the financial aid probation semester, the Institution will measure the student's academic progress. The student will retain financial aid eligibility only if the student meets published minimum SAP standards or meets the requirements of the academic plan at the end of the semester of financial aid probation. If the student does not comply with SAP or meets the requirements of the academic plan, he/she is not eligible for financial aid funds, unless the student successfully appeals or the student reaches satisfactory academic progress.

Any student who loses financial aid eligibility due to failure to meet SAP and attends school at his/her own cost will regain financial aid eligibility in the academic semester following the semester in which the student meets the minimum SAP standards. Students may not use financial aid to make retroactive tuition and fee(s) payments.

REGISTRATION FOR COURSES

- a. The Vice Chancellor of Student Affairs establishes the period for the registration process and includes the enrollment period in the calendar.
- b. Students are required to register during the period specified in the calendar.
- c. The official notification of admission is required to begin the enrollment process.
- d. For registration to be official, the bursar must validate the student's program-receipt.

Students are also required to register during the assigned calendar period, for day or evening, sessions, and this information will become part of their academic record. The institution has the right to change the time, the calendar or the classrooms of announced courses and to close or eliminate sections or courses from its academic offerings.

The Academic Calendar is published on our website at: <http://ut.suagm.edu/es/academia/calendario-academico>.

CLASSIFICATION OF STUDENTS

Full-time regular students are those who have registered for programs of no less than twelve (12) credit hours and are degree-seeking candidates. Half-time students are those with an academic workload of six (6) to eight (8) credits hours and are degree-seeking candidates. Less than half-time students are those with an academic workload of five (5) credit hours or less and are degree-seeking candidates. Three quarter students are those with an academic workload of nine (9) to eleven (11) credit hours and are degree-seeking candidates.

ACADEMIC LOAD

Academic load will not exceed twelve (12) credits per term for students with a GPA of 2.00 or less, and eighteen (18) credits per term for students with a GPA of 2.01 to 3.00. An academic load or more than twenty-one (21) credits will require prior approval by the dean of the school.

For summer sessions, academic load will not exceed twelve (12) credits, distributed over two (2) sessions. An academic load or more than twelve (12) credits will require prior approval by the dean of the school and a referral by a counselor.

DISTANCE EDUCATION

The Distance Education unit of the Vice Chancellor of Academic Affairs of the Universidad Ana G. Méndez-Recinto de Gurabo is committed to provide required academic support to the courses in their four forms: face to face, blended, on-line and with videoconferencing/telepresence using any technological means. In the face to face courses (web-supported), hybrid (blended) and on-line courses the technological tool used to incorporate all activities is the educational platform. In the videoconferencing/telepresence courses an interactive, bi-directional and multi-media transmission is used between two or more points.

The only on-line program at UT is offered by the School of Business and Entrepreneurship which is Business

Administration with specializations in Management, Marketing, Human Resources, and Materials Control and Administration. The goals and objectives of the on-line program and courses are the same as those for face to face traditional courses.

The Schools of Education, Engineering, Health Sciences and Natural Sciences and Technology are offering courses using videoconferencing and or tele-presence.

The Distance Education Unit ensures that all professors that teaches an on-line course are duly certified. Also, the unit oversees the instructional design and the quality in order that the courses are either equal or better than a face to face one. The Unit provides structured surfing and synchronous and asynchronous tools in the institutional educational platform.

The face to face and on-line user's support (students and professors) is provided by the Central Office of Informatics and Telecommunications (OCIT). The Help Desk service provides the user's name and password to students and professors. The Technical Support Administrator of Educational Platform Servers allows the student's and professor's access of face to face and on-line courses using the user's name and password. The User's 24/7 Support provides technical help to all on-line students of the graduate program of the School of Business and Entrepreneurship. The service is provided 24 hours for all 7 days of the week. The tests provided thru the Remote Proctor Now (RPNOW) tool are also configured.

CENSUS

The Institution is not required by any state or regional accrediting agency to take attendance. Nevertheless, a census is made during the first weeks of each semester to determine whether the student attended at least once during the period of enrollment. This census is made for reporting requirements only.

Nevertheless, professors may take into consideration the student's attendance when grading and should explain the possible impact of absences on the student's final grade, if any. The student is also responsible for all material covered during the course, even if he misses classes during the semester. Thus, attendance is strongly recommended to better retain the student and facilitate achievement of his/her academic goals.

GRADING SYSTEM

The Office of the Registrar distributes final grades after the end of each term. Students are graded according to the following system of letters and percentage values.

A	(90-100)	=	excellent
B	(80-89)	=	good
C	(70-79)	=	average
D	(60-69)	=	deficient
F	(0-59)	=	failure

A – 4 grade points per credit hour

B – 3 grade points per credit hour

C – 2 grade points per credit hour

D – 1 grade point per credit hour

F – 0 grade points per credit hour

In special cases the following grading system will be used:

W - Official withdrawal

I - Incomplete Work

IP - Incomplete, in progress

P - Passing grade – Grades of P are not counted toward grade point average.

NP - Failure

NR - Not reported

* - Repeated course

WA - Administrative withdrawal

WF - Stop attending the course and have not submitted an official withdrawal

WN - Non Attendance – enrolled but did not attend classes.

AU – Audit course

T – Transfer credit

GRADE CHANGES

Students who believe that there is an error in one or more grades should notify the Office of the Registrar within the first thirty (30) calendar days of the beginning of the next session. Students who do not receive their grades at the end of any semester should immediately contact the Office of the Registrar.

An instructor may change a previously assigned grade by processing an official change of grade form in the Registrar's Office. The instructor must request the grade change form, cite the reason for changing the grade, and submit it to the school or program dean(s) for approval. All grade changes must be submitted to the Registrar's Office no later than the last day of class of the following semester.

GRADE APPEALS

If the student feels that he or she has not been graded fairly, (s)he should first consult the professor. If this proves unsatisfactory, the student should then consult the dean of the school or program. If still unsatisfied, the student may consult the Vice Chancellor and submit an official grade appeal to the Registrar's Office. A committee hearing will be scheduled.

INCOMPLETE "I" GRADE

The student will receive a provisional grade of INCOMPLETE only in the case of a justifiable absence from the final examination and if there are a minimum of three partial grades required in the course.

The opportunity to make up the examination or final project will be offered only to those students who have a chance of obtaining a minimum final grade of "D".

It will be the responsibility of the student in question to make the necessary arrangements with the professor or dean of the corresponding area to determine the final project and to change the INCOMPLETE.

The INCOMPLETE (I) status can be changed if the student completes the required work within the first thirty (30) days of the next academic session, in accordance with the established dates of the academic calendar.

The student who, due to the INCOMPLETE received in one or more courses, does not demonstrate academic progress will recuperate financial aid once the INCOMPLETE is removed in accordance with institutional norms, providing that this occurs within the deadline established by the federal government for assigning such aid has not elapsed.

For the purpose of evaluating a student's satisfactory academic progress at the end of the academic year, the (I) will be considered. After the removal of the Incomplete (I), he or she can appeal the institutional decision regarding academic standing.

REPEATING COURSES

Students may repeat a course in order to improve their academic average. Credit will be given for the higher grade, which will be used to compute the grade point average. If the grade in the second attempt is the same as the first, only one will be used to calculate the cumulative average.

- a. Students who wish to repeat a course may do so. However, they **must** repeat all courses required for graduation where a D, F, W, or WF grade was obtained.
- b. The institution will allow students who earned a C, D, F, W or WF, WN in a course, to receive financial aid to repeat the course provided that 150% of the intended courses have not been exceeded.
- c. Students who repeat a course will receive the higher grade.
- d. If the grade obtained in a repeated course is the same as the previous grade, it will count for the cumulative average but will count only once for the graduation GPA.

- e. With respect to practicum courses, the student will have only two opportunities to repeat the course pending the recommendations and approval of the program dean and practicum supervisor.
- f. A student will not be able to repeat the course until a grade has been posted.

WITHDRAWALS

Students wishing to officially withdraw from a course or from the institution must file an application with the Office of the Registrar within the period established in the academic calendar. A reduction in course workload may jeopardize the student's financial and/or veteran's benefits. The academic standing of the student will not be affected by partial or full withdrawals from the institution so long as the withdrawal is carried out before the end of the period specified by the institution for tuition refund eligibility. In the case of full withdrawal from the institution, the student will be considered not to have studied that semester.

Dropping courses or withdrawing from the institution after the end of the above-mentioned specific period will affect the academic standing of the student. The student will be classified in the category in which he or she falls at the end of the period for withdrawal eligible for refund of registration fees.

CHANGES IN THE PROGRAM OF STUDIES

Students can apply for a reclassification in a program or major if they comply with the following:

1. Have an interview with the school dean
2. Apply for reclassification at the Office of the Registrar.

Students can apply for only one reclassification during a semester.

The enrolled credits and the cumulative average from student's previous program will be applied for the programs into which the students have been reclassified, for the purposes of the Satisfactory Academic Progress.

STANDARDS FOR ACADEMIC PROGRESS

There are three categories of regular students according to their grade point average and number of courses completed: students with excellent achievement; students with satisfactory achievement; and students on probation. Students with a satisfactory academic progress are those with a grade point average equal to or higher than the established retention index and who satisfy the percentage of approved credit hours established by the academic norms.

At the end of each academic year, the Registrar will determine the grade point average (GPA) and the credit hours required of each student per academic year. This information will be measured against the established retention standards in order to determine the academic status of the student.

INDEPENDENT STUDY

Independent studies courses will be offered as an alternative for students who require a course that is not programmed in their graduating year. These courses will be offered by independent studies if they meet the following specific criteria:

- Course content cannot be replaced by another.
- The course is not being offered in the modality in which the student is enrolled, and the student cannot take the course that is being offered by the other modality.
- Special cases will be considered individually on its own merits by the dean of the School.
- During his university life the student may take a maximum of three (3) courses. Any exceptions will be approved by the dean of school.

ACADEMIC PROBATION

Students whose academic achievement is below the established retention index or who do not complete the percent of approved credit hours required according to regulations will be placed on academic probation for one (1) year. During this period the students will not be eligible for financial aid. The student request an appeal. The student's appeal will be reviewed by a committee. For students of Technical Programs, the probation period will be for one (1) semester.

Upon completion of the probation period, students must meet the required percentage of credit hours and grade point average as established by their academic degree program.

For percentage of credits required see Appendix.

ACADEMIC SUSPENSIONS

Students will receive a one (1) year academic suspension if the cumulative academic index is lower than the retention index, or if they have not met the percentage of required credit hours upon completion of their probation period.

The University will not accept courses, diplomas or degrees earned by a student during the academic suspension period.

Students who wish to be readmitted upon completion of their academic suspension period must meet the current university readmission requirements.

Students who interrupt their studies or program during the probation period will still be considered on probation during the readmission process.

Readmitted students who have completed their one (1) year suspension period will be evaluated by the Admissions Committee of their academic program. Upon readmission, students will be placed on probation for a second period.

If a student does not meet the required retention index and the percentage of approved credit hours during the second probation period, he or she will be suspended academically for a maximum period of two (2) years.

The institution may suspend a student on recommendation of the Disciplinary Committee or the Vice Chancellor of Student Affairs, following the dispositions of the Student Regulations available in the Students' Rights and Responsibilities Manual.

Under extraordinary conditions, the Academic Suspension Appeals Committee may approve an additional probation period of one (1) year if a student is able to complete all the graduation requirements within that academic year.

APPEALS

A student may appeal an institutional decision regarding satisfactory academic progress, if under extenuating or crisis circumstances he or she was not able to meet the requirements or conditions established by the University.

The University will consider the following crisis or extenuating circumstances to accept a student's appeal and to grant an exemption from the Academic Progress Policies: illness of the student or a relative, economic crisis due to illness affecting the a head of household, natural disasters, divorce, death in the immediate family, family problems, legal circumstances, and justified changes in academic objectives which cause an impact on the student's academic progress.

APPEALS COMMITTEE

The Appeals Committee will be composed of one representative from each of the following offices: Dean of the School, Registrar, and Vice Chancellor for Student Affairs or designated representatives.

APPEALS APPLICATION

Students who meet any of the academic progress appeals criteria must submit all the necessary documentation to justify their request.

If a student requests an appeal based on a mathematical or calculation error, and it is corrected by the Office of the Registrar, he or she will not go through the full Appeals process.

REINSTATEMENT OF FINANCIAL AID

If a student's appeal is accepted by the Appeals Committee, he or she will be eligible to receive financial aid as long as he or she meets the federal financial aid deadlines and guidelines.

Appeals decisions are issued in writing by the Office of the Vice Chancellor for Student Affairs. This communication is issued by the Office of Financial Aid to reinstate a student's financial aid package.

If a student meets the conditions regarding his or her academic progress or those related to any academic sanction, he or she will be eligible to receive financial aid during the following enrollment period.

STUDENTS RIGHTS AND RESPONSIBILITIES

A Students' Rights and Responsibilities Manual, available to all students, sets forth the rights of students, along with corresponding responsibilities. This document also addresses issues associated with the relationship between the student and the University. It provides information on protection in academic pursuit and privacy of records; sets forth all the conditions for responsible behavior on the campus; lists the various appeal and grievance procedures available to students; and includes a section on student discipline with control and discipline of college students. This document complies with relevant federal regulations such as the awarding of financial aid, protection of privacy of records, and equal access/equal opportunity. For more information visit the website at <http://ut.suagm.edu/sites/default/files/uploads/Asuntos-Est/srtk/REGLAMENTO-ESTUDIANTE-2016.PDF> (Available only in Spanish).

FAMILY RIGHTS AND PRIVACY ACT INFORMATION STATEMENT

Universidad Ana G. Méndez-Recinto de Gurabo has a long-standing commitment to protect students' rights and privacy of information. This commitment will continue as a matter of University practice. The University complies with the provisions of the federal Family Rights and Privacy Act. These

federal and state requirements relate to accessibility and confidentiality, provide pertinent and detailed information concerning classification of student records, and access and release provisions.

University procedures are available to students, faculty, administration, and staff in the Office of the Vice Chancellor of Students Affairs, as well as in other offices and departments of the campus. In addition, the complete procedures are published in the Student Manual.

RELEASE OF STUDENT INFORMATION

In accordance with, FAMILY EDUCATIONAL RIGHTS AND PRIVACY ACT (20 U.S.C. 1232g; 34CFR Part 99), students at Universidad Ana G. Méndez-Recinto de Gurabo have the right to inspect educational records and to correct such records as warranted. The institution protects students from release of information for inspection and review unless he or she waives this right. The parent(s) of U.S.C.S.s. 152 Internal Revenue Code also has the right to inspect records, which are maintained by the University on behalf on the student.

There are two distinct categories of records: (1) directory information records, and (2) limited access records.

1. Directory information, which may be made public, includes the student's name, last known address, telephone number, date and place of birth, major field of study, participation in officially recognized activities and sports, weight and height of members of athletic teams, dates of attendance, degrees and awards received, and the most recent previous educational agency or institution attended by the student. The office of the Vice Chancellor of Student Affairs will only release this information after the petitioner has demonstrated a legitimate need to have such information. Students who do not wish release of "directory information" must complete a statement in the Office of the Registrar no later than the last day of each term; otherwise, directory information may be disclosed by the University for legitimate purposes.
2. Limited access records pertain to the permanent academic records of the student, disciplinary records, financial information, and testing data. This category also includes all records maintained officially by the institution which do not come under the categories of directory information, or sole possession records. The institution will not release information in limited access records unless it has the written permission of the student or parent.

GRADUATION REQUIREMENTS

Undergraduate students of Universidad Ana G. Méndez-Recinto de Gurabo will be eligible to receive academic degrees after meeting the following requirements and procedures:

1. Students must apply for graduation at the Registrar's Office during the period established in the academic calendar.
2. Completion of the courses required for the degree as set down by the institution.
3. Completion of the number of credit hours required for the degree with a minimum grade point average of 2.00 for most programs. For specific information about a particular academic program, must communicate with the School.
4. To compute the grade point average for graduation, only successfully completed courses which were requirements for the degree or certificate will be considered.
5. Transfer students must complete at Universidad Ana G. Méndez-Recinto de Gurabo at least the last thirty (30) credit hours of a bachelor's degree and the last twelve (12) credit hours of an associate degree. The student must complete the last twelve (12) credits of his/her major at Universidad Ana G. Méndez-Recinto de Gurabo.

Students must also settle any debts with the institution. No document certifying graduation will be given until documentation has been presented that there are no outstanding debts.

All students applying for readmission will be subject to the requirements for graduation in effect during the year they are readmitted.

Commencement exercises will be held once a year, at the end of the second academic semester. Students who meet graduation requirements at the end of any term or summer session may apply to the Office of the Registrar for a certification to that effect.

GRADUATION WITH HONORS

Students are eligible for the following honor designations:

Cum Laude	Average of 3.50 to 3.69
Magna Cum Laude	Average of 3.70 to 3.89
Summa Cum Laude	Average of 3.90 to 4.00

Transfer students may graduate with honors if they obtain a grade point average of 3.50 or higher in a minimum of 60 credits at Universidad Ana G. Méndez-Recinto de Gurabo.

COURSE VALIDITY

Credits earned through courses taken at Universidad Ana G. Méndez-Recinto de Gurabo or at an accredited institution will be valid for a maximum of 7 years. After that period the credits will lapse.

STUDENT SERVICES

Universidad Ana G. Méndez-Recinto de Gurabo improves and advances the student experience by streamlining its student services into one centralized location, the Integrated Student Services Center (CISE, from its Spanish acronym). The purpose of this Center is to provide competent professional assistance in two areas: (1) Enrollment management services and (2) Academic and personal support services. The Vice Chancellor of Student Affairs oversees the development and growth of these areas.

ENROLLMENT MANAGEMENT SERVICES

The **Office of Marketing and Recruitment** recruits new students, transfers and readmissions. It disseminates information on UT academic offerings, strengths and services through various promotion and recruitment activities. It coordinates and offers orientation activities to recruit students undergraduate, graduate and doctoral programs by means of integrated campaigns. The Office develops year-round activities of recruitment with key personnel of the schools.

The **Admission Office** processes admission requests and admits students within the parameters established by each school. It also analyzes documentation and maintains communication with the student on the status of his/her request for admission. The Office coordinates the process and admission of prospective students for the different schools.

The **Financial Aid Office** offers financial aid orientation. It also analyzes documentation and assigns state, federal and institutional funds. Among others essential functions, it also administers and coordinates Title IV programs and processes the funds of proposals, athletic, administrative and honor scholarships.

The **Bursar** is responsible for applying the fee policies and administering the payment plans that guarantee institutional incomes. This officer notifies and monitors the compliance of the fiscal policy established by the Vice Presidency of Financial Affairs, establishes the process of validation of registration, administers the application of federal funds refund policies and registers the private and public contracts of agencies. It also applies refund processes and the

emission of checks to students, registers payments and maintains the collection system of the students' accounts.

The **Office of the Registrar**, in addition to handling student registration each term, provides various services for students. This office provides transcripts of students' academic records, verifies and certifies enrollment status, mails final grade reports, processes grade changes, orders and issues diplomas, processes changes in name, address, and telephone number.

ACADEMIC AND PERSONAL SUPPORT SERVICES

These services are provided in a variety of forms and settings, including individual counseling and educational groups, workshops, seminars, formal classes, as well as the traditional one-on-one tutorial sessions. The Center's staff has been professionally trained and they are committed to helping students to make the most of their university experience. All services are provided on a strictly confidential basis, and respect the individuality of each student.

Counseling Services are available to students with educational, personal, and decision-making concerns. A wide variety of programs, workshops, counseling opportunities and informational materials are provided to help Turabo students meet the challenges of university programs and experiences. There are individual counseling and testing services for occupational and educational assessment. These services are offered by two units, each targeting different needs and special populations: (1) Quality of Life and Student Well-Being Services and (2) Student Development and Retention Services. These services are offered from 8:00 am to 8:00 pm, Monday through Thursday, 8:00 to 5:00 pm on Fridays and from 9:00 to 1:00 on Saturdays.

The **Quality of Life and Student Well-Being Office** designs, develops, and promotes an extensive system of programs, services and activities that facilitate the integration of multidisciplinary resources to create an atmosphere of respect, welfare and quality of life. The office promotes an ecological model of health, which encourages healthy life styles through activities related to awareness and education on topics such as violence prevention and the use of drugs, alcohol, and cigarettes. The Office encompasses, counseling and multidisciplinary services, a health services program, an education and prevention program (PREVEA), a community connection program, volunteer projects and student organization support. It also serves as a resource center for Internship and practicum students.

In addition, this office coordinates the "Easy Access" Program, which offers special services for disabled students. These services include: parking, educational goal planning, tutoring and other student needs. The students should

register with the program at the beginning of their admission process.

The **Student Development and Retention Services Office** is responsible for promoting the integration and adjustment of new students. It articulates the administration of diagnostic tests and carries out the academic orientation and counseling of first and second year students. The Office articulates projects for the improvement of the academic performance and retention in association with the schools and off-campus centers. Individual and group counseling services, tutoring, extra-curricular activities and peer support groups are offered to improve new students' adjustment processes to university life.

Academic Development and Support Services are available through two complementary programs of the Student Development and Retention Services Office. Their services are developed through funds awarded by the US Department of Education and by other institutional funds. The Complementary Educational Services Program and the Supplementary Instruction Program promote support services for students with academic difficulties through tutoring, mentorships and supplementary instructional activities.

Career and Placement Services are offered by the Office of the Assistant Vice Chancellor of Career and Placement. This office is responsible for satisfying the employment needs of students, alumni and community members and for improving their employment skills, increasing productivity and competences, thus bringing about the client's effective placement. The office functions as a "one-stop" career center and through diverse alliances with the government's Employment Center (Consortium Caguas-Guayama), integrated services are offered such as counseling, vocational testing, evaluation of employment skills, preparation of resumés and letters of presentation, referrals to governmental agencies and access to Puerto Rico's Department of Labor updated employment offerings through a technological laboratory of resources.

To assist students in career planning, a career reference library is provided with the center's printed, audio and videotape materials about specific occupations, skills, and requirements for jobs, educational and career matters. The computerized occupational information system provides current educational, and labor market requirements, skills specification and other information to be used in the decision-making process. Consulting services for student, faculty, administration and community members are offered through this unit. An active job placement assistance program maintains continuous communication with employers. A computer database of prospective employers is in use. Students may register for part-time and full-time jobs or seasonal employment while pursuing their academic

programs. Vocational counseling services are also offered to high school students from nearby communities.

The services are sponsored by institutional funds and with funds from two federal proposals: Hispanic-Serving Institutions Assisting Communities (HSIAC) Program and AmeriCorps Vista.

The **Scholarship and Internship Program** provides the opportunity for active students to request special scholarships and permits students to participate in academic-professional and research opportunities in different companies and educational institutions globally. The activities promoted by this office complement the student's academic development and allow the development of professional abilities and personal skills to be integrated successfully in the work force. It also assists talented high school students in completing their university studies in the SUAGM. This program is funded by corporate, private, public, and institutional funds.

HEALTH SERVICES

Services are located in the CISE building. The health services staff consists of a part-time physician and a registered nurse. Their primary purpose is to provide students with emergency and ambulatory services. The student health services stress the concept of well-being and preventive medicine. Health education and counseling are available as well as treatment for medical problems. The staff is on duty Monday through Thursday from 8:00 a.m. to 8:30 p.m., Friday from 8:00 a.m. to 5:00 p.m. and Saturday from 8:00 a.m. – 12:00 p.m., and is available for emergencies, first aid, referral sources and medical counseling. Basic medical care is provided, but students are ultimately responsible for making arrangements for their own complete health care.

ARMY, AIR FORCE (ROTC)

A formal agreement has been established between Universidad Ana G. Méndez-Recinto de Gurabo and University of Puerto Rico for cross-enrollment of students in the Army Reserve Officers Training Corps (ROTC) and the Air Force Training Corps.

Students from Universidad Ana G. Méndez-Recinto de Gurabo are authorized to enroll and attend classes in the ROTC Program at the University of Puerto Rico. Those courses will be considered as Universidad Ana G. Méndez-Recinto de Gurabo resident courses. Credit will be granted and students will be entered in the official academic record.

Students will not be charged for courses taken in the ROTC Program. The United States Army and Air force through the University of Puerto Rico will provide ROTC textbooks, military type equipment, uniforms and military training.

Students will have equal opportunity to compete for two and three year scholarships on a nationally competitive basis.

Semester credit hours for ROTC course are as follow (Military Science-MS)

MSI 2 credit hours (Fall Semester)
(1 hour classroom; 1 hour Leadership Lab)

MSI 2 credit hours (Spring Semester)
(1 hour classroom; 1 hour Leadership Lab)

MSII 3 credit hours (Fall Semester)
(2 hours classroom; 1 hour Leadership Lab)

MSII 3 credit hours (Spring Semester)
(2 hours classroom; 1 hour Leadership Lab)

MSIII 4 credit hours (Fall Semester)
(3 hours classroom; 1 hour Leadership Lab)

MSIII 4 credit hours (Spring Semester)
(3 hours classroom; 1 hour Leadership Lab)

MSIV 4 credit hours (Fall Semester)
(3 hours classroom; 1 hour Leadership Lab)

MS 400-01 3 credit hours (Advanced Camp, Fort Riley, Kansas)

MS 300-01 2 credit hours (Basic Camp, Fort Knox, Kentucky)

AS 100 2 credit hours (Fall & Spring)
(1 hour classroom; 1 hour Semester Leadership Lab)

AS 200 2 credit hours (Fall & Spring)
(1 hour classroom; 1 hour Semester Leadership Lab)

AS 300 4 credit hours (Fall & Spring)
(3 hours classroom; 1 hour Semester Leadership Lab)

AS 400 4 credit hours (Fall & Spring)
(3 hours classroom; 1 hour Semester Leadership Lab)

SERVICES FOR DISABLED STUDENTS

Federal and state regulations guarantee disabled students equal opportunity in post-secondary education. The university has created special support services to assist disabled students. These services include, but are not limited to, assistance in registration, counseling, financial aid, readers for the blind, interpreters for the deaf, class notes, as well as individualized classes and/or tutoring. Transportation services are available through a special partnership between Universidad Ana G. Méndez-Recinto de Gurabo and the government's Department of Vocational

Rehabilitation. Services are coordinated in the Quality of Life and Student Well-Being Office.

AUTOMOBILES ON CAMPUS

The security director enforces traffic and parking regulations on and around campus. The parking system consists of express lanes with proximity readers (AVI electronic seal). In addition, in each entrance and exit station, ticket machines are installed to facilitate access to visitors.

DINING SERVICES

The Student Dining Service provides a variety of options for students who wish to dine on-campus. The cafeteria offers breakfast, lunch and dinner, Monday through Saturday. Hot meals and fast food are available. Vending machines for snacks and refreshments are also located throughout the campus.

STUDENT ACTIVITIES

A combination of both extra-curricular and co-curricular activities is available on campus providing all opportunities for all students to enhance their educational experience. The Office of Cultural and Social Activities is responsible for the diffusion and promotion of artistic events for the enjoyment and enrichment of the university community according to its needs and interests. Each year through the establishment of a visiting artists series, outstanding musicians, singers, artists, dancers, lecturers and other performers share their talents and expertise with students. In addition to on-campus art exhibits, the academic schools present dance programs, musical concerts, athletic competitions, and theatrical productions.

STUDENT GOVERNMENT

Through student governing bodies, students have an opportunity for self-government and to participate with the faculty and administration in formulating appropriate policies. Student Council members are elected by secret vote by the members of the Student Government Assembly. The Council meets once a month. Students are represented in the institution's governing bodies through this Council. Opinions and recommendations are presented to the Vice Chancellor of Students Affairs. Its members participate in academic, discipline, sports, and cultural activities committees.

STUDENT PUBLICATIONS

The institutional newspaper *El Taíno* is published by students of the communication program. It serves as a medium for institutional activities and as a practicum experience for the students.

STUDENT ORGANIZATIONS

According to their interests, students may join religious, social service, academic, professional, and honorary groups. A fair is held at the beginning of each term to help new students get acquainted with and select the group or groups that interest them. All students are encouraged to participate actively in clubs and organizations.

UNIVERSIDAD ANA G. MÉNDEZ-RECINTO DE GURABO CHOIR

The Universidad Ana G. Méndez-Recinto de Gurabo choir offers students the opportunity to cultivate their musical abilities and talents and enables them to represent the University in activities on and off campus.

THEATER WORKSHOP

The theater workshop provides students with the opportunity to develop their abilities in the performing arts. The workshop organizes and produces one play per semester for the enjoyment of the university community and the community at large.

ATHLETIC AND INTRAMURAL PROGRAMS

Athletic and Intramural Programs within the Department of Physical Education, of the School of Education play an important role in the educational process of Universidad Ana G. Méndez-Recinto de Gurabo. The programs offer a wide range of recreational and intercollegiate competitive sports for all eligible students. Both individual and team sports have brought the university and individuals national recognition. An outstanding staff of administrators, coaches, and expert trainers work in unison to make the campus athletic programs for men and women a first-class endeavor. The university boasts 28 men's and women's varsity teams, which have won 240 champion and sub-championships since 1975. These triumphs include the record-setting achievement of winning male and female Intercollegiate Athletic League track and field championship 24 times since 1987. Universidad Ana G. Méndez-Recinto de Gurabo athletes have also been champions in basketball, weight lifting, decathlon, heptathlon, volleyball, beach volleyball, tennis, table tennis, swimming and relays. Each year, the intramural program allows participation of more than 7,000 active and passive students and faculty members. The teams are called the "Tainos" with their orange, black, and white colors. The sports facilities include indoor basketball and volleyball courts, tennis courts, free weight and Cybex machines gym , a 400-meter track, swimming pool, a baseball park, jogging trail and wellness center.

VETERAN'S SERVICES

The Veterans' Services Office, located in the Registrar's Office, is primarily concerned with the motivation of veterans and their dependents to effectively exercise their right to an education.

Veterans are assisted in the completion and processing of required documents for the purpose of establishing eligibility, certification of services and academic progress. These services are offered in close coordination with the Veterans Administration Office of Puerto Rico.

Veterans and their beneficiaries must complete their program of studies within the time established by their curriculum. Students who extend their studies beyond the time established by the program cannot continue to receive veterans' benefits. If the student is a recipient of the Pell Grant, he may resort to the 150% additional time established by the institutional standard for Satisfactory Academic Progress. Veterans will be evaluated utilizing both veterans' benefits and Pell Grant criteria, if they are beneficiaries of these.

Veterans Administration Office will not pay courses in order to raise GPA. It will only pay failed courses (F, NP-Failure) or

those that requires a minimum approval grade. Veteran's Administration Office will reduce benefits to the students as of the last day of attendance to class.

VICE CHANCELLORSHIP OF INFORMATION RESOURCES INFORMATION RESOURCES

The Vice-Chancellorship of Information Resources (VCIR) is the primary information center for the UT main campus and additional locations. It provides students, professors, staff, and the external community services and resources that are aligned with the institutional priorities, goals and strategic plan. The VCIR is organized into four main structures: the Library, Archives, Information Technology and Informatics and Telecommunications units.

Library services, archives, collections, and technology resources play a crucial role in the support of the institution's mission for teaching, learning, research, and information literacy through guided independent instruction on the web and direct group instruction. During the past ten years, the VCIR has provided a place for both the physical and the Virtual Library.

LIBRARY

The Library administers collection development activities (acquires and catalogs materials) for its main campus and Additional Location libraries. The Library has support from the Coordinator for Automated Systems to administer and update the Online Public Access Catalog (Voyager) and the Virtual Library. The VCIR offers a remarkable collection of print, audiovisual materials, and electronic resources and a vigorous information literacy program conducted through guided independent instruction via the web and direct group instruction.

The UT Library offers intra-library loans within the two other SUAGM universities and has interlibrary loan agreements with other universities in Puerto Rico and the United States. Library instruction has always been an important service provided at the UT Library. Notwithstanding, the level of commitment and resources for a well-designed program of user instruction has varied over time. The Library is proactive in considering and foreseeing the future needs for equipment, resources, services, and technologies relevant to the varying needs of a modern student population. Library assessment is continual and ongoing. The goal is to assess the use of library resources, satisfaction with technologies and services, and to integrate results to enhance user satisfaction and learning experiences with library services and resources.

COLLECTIONS

The Library develops its collections according to the priorities of the programs to fulfill the information needs of its users. It actively seeks recommendations from faculty and administrators for the acquisition and development of library resources and services.

The library's collections include print, audiovisual materials, and electronic resources. There are books, electronic books, newspapers, maps, indexes, journals, periodicals, databases, and audiovisual materials. There is a special books' collection that was donated by the notable scholar Dr. Arcadio Díaz Quiñones in 1998. The Arcadio Díaz Quiñones print collection consists of approximately 2,709 volumes on the subjects of art, history, and literature. The Library also has special collections donated by Luis Trelles (Puerto Rican film critic), Mario Gaztambide, Dr. Albert O. Hirschman, Juan Manuel García Passalacqua (3,887), Dr. Ivonne Acosta Lespier, Edgardo Rodríguez Juliá (759), José Luis González (10,542), Francisco Manríque Cabrera (4,433) and a music collection of operas (1,547) donated by Antonio Monroig.

The information resources in the Library at Universidad Ana G. Méndez-Recinto de Gurabo are a combination of a healthy print collection (119,569 volumes) and an electronic collection (composed of newer information technologies). Both the print and electronic collections have responded to changes undergone in the institution from being solely a teaching to a teaching and research institution. During the past ten years, the Library has experienced demand growth in areas such as e-books (3,061,784) and e-journals (29,180). This augmentation in requests for electronic resources has been combined with user needs for research tools such as Refworks and searching technologies provided by applications from Exlibris (Voyager and Primo) and Ebsco Discovery. While the collections have been expanding, the planning, design and implementation of library services has concentrated on developing their advanced use in the academic community through an aggressive information literacy program which is part of the Freshmen Seminar that provides literacy information support to faculty, students, courses and programs to improve teaching, research and learning.

ARCHIVES

The *Biblioteca Museo Gobernador Pedro Rosselló* (BMGPR) was created as a result of Law 290 signed in 2000 by the Commonwealth of Puerto Rico, which allows all former governors of the island to designate a non-profit or educational institution as a depository of historical materials (documents, photographs, media files, and memorabilia) of their years in office, to safeguard and make accessible to the public for reference and study.

INFORMATICS AND TELECOMMUNICATIONS

The Informatics and Telecommunications unit, which is part of the VCIR, provides telecommunications and computer resources support (computer labs and network) to the academic community (students, professors, staff, and general public). Given that the Informatics and Telecommunication unit is interconnected to the Central Office of Information and Telecommunications (OCIT according to its Spanish acronym), located at the SUAGM headquarters, guarantees that any technology-driven project that impacts SUAGM is effectively managed by both units. The modern telecommunications infrastructure and hi-tech staff guarantees a constant assessment, evaluation, and modernization of both the technological needs of the Physical Library and Virtual Library. The Informatics and Telecommunications unit maintains a link with the Schools to help provide up-to-date computers and technologies throughout the institution to offer excellent technologies and ample facilities that meet the needs of UT users.

During the past ten years, the VCIR has improved its library resources and services. A substantial expansion of the Virtual Library's e-books holdings has been completed to house more than three (3) million in the collection. The e-book collection includes among other outstanding databases: Safari Tech Books Online, Springer Engineering Books, E-Libros (Spanish online books in multidisciplinary topics), and Compustat.

MUSEUM AND CENTER FOR HUMANISTICS STUDIES DRA. JOSEFINA CAMACHO DE LA NUEZ

The Museo y Centro de Estudios Humanísticos Dra. Josefina Camacho de la Nuez of the Universidad Ana G. Méndez-Recinto de Gurabo has been a museum and center for the study of the humanities at the Universidad Ana G. Méndez-Recinto de Gurabo since 1980's. Its mission is to collect, preserve, study, and disseminate the artistic and humanistic expressions of the regional and national Puerto Rican culture for the enjoyment and benefit of the university community and the general public. The museum started in one of the wooden historic buildings on campus of the sugar cane plantation Santa Juana. The Museum has a permanent collection of 3,000 objects. It has recently inaugurated a new 25,000 sq. ft. state of the facilities with galleries dedicated to the Archaeology of Punta Candelero, Puerto Rican Folk Arts, Puerto Rican Poster Collection, the History of the Central Oriental Region, Colonial Paintings from Latin America of the Lola and Antonio Roig collection, the Ana G. Méndez historical collection and a rotating exhibition space. It also has an Education Learning Center, the Walter Murray Chiesa Folk Art Archives, a 209-seat auditorium, an interior sculpture garden, a museum store and a café.

EVENING AND SATURDAY PROGRAM

Students may enroll in the regular academic programs offered by the Evening and Saturday Program. The evening division operates Monday through Thursday from 10:00 a.m. to 9:00 p.m., from 8:00 a.m. to 6:00 p.m. on Friday, and from 7:00 a.m. to 3:00 p.m. on Saturday.

CONTINUING EDUCATION

The Continuing Education Program endeavors to strengthen social structure and to foster and develop academic programs according to the educational needs of the individual. These programs do not necessarily function under traditional academic rules, and their intention is to:

1. Update the student's knowledge.
2. Supply educational opportunities for personal growth to people from a variety of educational backgrounds, thus satisfying certain social, personal or occupational needs.
3. Implement professional training, both on-campus and in-house, to enhance the occupational advancement and personal development of personnel in the public and private sectors.
4. Promote community activities that explore and seek solutions to social, political, and economic problems.
5. Organize service programs for people who want to enrich their leisure time.

The program designs seminars, continuing education courses, conferences and life enrichment courses. Industries, government agencies, community institutions and the community in general benefit from this program.

SCHOOL OF PROFESSIONAL STUDIES (AHORA PROGRAM)

The mission of the AHORA Program of the School of Professional Studies is to provide an accelerated educational process to adult students. The program differs from traditional methods of instruction in that the professional experience of participants is incorporated into the classroom to create an interactive, challenging and dynamic environment. Faculty members have professional experience and have been specially prepared to work with adults as innovative educational facilitators. AHORA is designed exclusively for the adult student; it offers a professional environment, as well as integrated, personalized and individualized services. To fulfill this mission, the School of Professional Studies intends to:

- Promote adults to value continuous learning and increase their contribution to the world of employment
- Facilitate adult students in attaining their educational goals

- Create a learning community that facilitates building new knowledge which is based on and is applicable to the professional and personal reality of adults
- Provide integrated student services of quality and easy accessibility to adult students
- Recruit and develop staff who know and are able to meet the needs of the adult students effectively.
- Integrate technology into the academic, service and administrative processes
- Develop academic offerings that respond to the present needs of the professional and business world
- Establish a continuous process of feedback and assessment of all the processes and services.

Description of the Accelerated Program of Studies

The AHORA Program is accelerated because all of its courses are offered in five or eight week sessions. During each session, classes meet once a week for four hours. The accelerated methodology is based on a learning process shared between the professor and the student. Each student receives a module which serves as a study guide and indicates the assignments and activities that must be completed to prepare for class. Our faculty is specially selected and trained to work with adult students through the accelerated mode, facilitating a class environment where learning is built on experiences and the assignments performed by the students. This model of accelerated studies can be applied to the different academic programs of the institution, to new academic programs or any other academic program where adult students participate. The courses are offered evenings and Saturdays (morning and afternoon). The student may take a maximum of two classes per session, completing six credits every five or eight weeks. Registration is continuous, with courses beginning fourteen times a year, and the possibility of completing up to fifty-four credits in an academic year. This way, the program provides greater flexibility for students, since they can accelerate their academic progress or design a class program that conforms to the different commitments they may have during the year.

Admission Requirements

To fulfill its mission and goals, the AHORA Program admits only adult students with academic and professional experience that meet the following requirements:

- 21 years of age or older
- 2 years of work experience
- 12 credits of academic work at the postsecondary level

OFF-CAMPUS CENTERS

Universidad Ana G. Méndez-Recinto de Gurabo currently operates five (5) additional locations located in Barceloneta, Cayey, Isabela, Ponce, and Yabucoa. Each additional locations deliver the same curriculum that is offered at the UT main campus. Contact information is included below.

BARCELONETA

Ramón Díaz, Director / rdiaz@suagm.edu

Postal Address

PO Box 2194, Barceloneta, PR 00617

Physical Address

Carr. PR 2 Km. 59.0
Sector Tiburón, Barceloneta, PR 00617

SCHOOL OF LIBERAL ARTS AND GENERAL EDUCATION

SCHOOL OF LIBERAL ARTS AND GENERAL EDUCATION

The Office of the Deanship of General Education was created in February 2012 to address particular needs of new students admitted to the University. In addition to offering first-year and second-year courses in the General Education Component (GEC), the Deanship of General Education provides an array of support services to students in their first and second year. Additionally, advanced undergraduate courses in English, Spanish, and History are offered as a service to Education majors or those interested in pursuing further study in those areas. In August 2017, the Deanship became the School of Liberal Arts and General Education. It continues working closely with all the schools and offices of the university to promote the success of all students.

MISSION

The mission of the School of Liberal Arts and General Education (SLAGE) of the Universidad Ana G. Méndez-Recinto de Gurabo is to provide students with fundamental intellectual and critical thinking skills to ensure that students are equipped to be responsible members of a global and technological society

In such, the SLAGE aims to prepare students with the necessary skills in oral and written communication, knowledge of global and historical issues, mathematic and scientific reasoning, technological competencies, and biological and social aspects of humans.

VISION

The vision of SLAGE is to provide students with a breadth of knowledge and experiences to think and reason across disciplines so that they are successful both inside and outside the academic world.

LEARNING OUTCOMES

The School of Liberal Arts and General Education aims to develop the following knowledge, skills, and attitudes in all students:

1. Identify and understand global issues from the social, economic and political perspectives
2. Comprehend the biological, behavioral and social aspects of human beings
3. Analyze the importance of historical and current world events

4. Understand and explain the multi-disciplinary nature of learning and problem solving
5. Explain the relationship and contribution of the arts and the humanities in the development of society
6. Apply ethical values and principles as a responsible citizen
7. Recognize the importance of the conservation of nature and the environment
8. Respect human rights, tolerance, diversity, and individual and cultural differences
9. Develop and apply critical thinking skills to solve problems
10. Communicate effectively in oral and written Spanish and functionally as English language learners
11. Develop and apply mathematical, reasoning skills and scientific inquiry methods
12. Achieve basic literacy in technology

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN INTERDISCIPLINARY STUDIES

The associate degree in Interdisciplinary Studies is designed for students who want to receive an education in liberal arts with one area of focus, or a study of their own interest. The interdisciplinary focus of the program develops the skills, knowledge, and attitudes of critical thinking and problem solving, ethics, and cultural sensibility. All of these are necessary in today's society and employment ventures. Additionally, credits earned in the associate degree are transferable to the bachelor's degree in various fields of study.

COURSE DESCRIPTIONS

(Courses marked with @ could be offered in both modalities, traditional or online.)

ART 101 **Art Appreciation** **Three Credits**

The course discusses the basic principles of painting, sculpture, and architecture, with emphasis on painting. It centers on the element necessary to judge a work of art. The content includes the different techniques for creating works of art.

ART 121 **Drawing I** **Three Credits**

The course covers basic principles of drawing. It includes training in the different media of graphic expression, along with exercises in structure, proportion, light and shadow, rhythm, balance, and the basic concepts of perspective.

ART 122 **Drawing II** **Three Credits**

The course is a continuation of ART 121, and develops more advanced principles of drawing. It includes further development in the different media of graphic expression, along with exercises in structure, proportion, light and shadow, rhythm, balance, and the basic concepts of perspective.

ART 201 **Theater Arts I** **Three Credits**

The course centers on drama from a historical perspective, and includes an introduction to the theater arts. Students may be assigned to participate in small-scale productions.

ART 202 **Theater Arts II** **Three Credits**

The course is a continuation of ART 201, and develops more advanced topics in theater arts. It includes further exploration of drama from a historical perspective, and includes an introduction to the theater arts. Students may be assigned to participate in small-scale productions.

ENGL 152 **Fundamentals of Reading and Writing** **Three Credits**

This course develops and strengthens students' listening, speaking, reading, and writing proficiency in English. It includes grammar, vocabulary expansion, reading skills, writing mechanics, and sentence writing. Students analyze and write, descriptive, narrative, opinion, and cause/effect paragraphs.

ENGL 152E **Fundamentals of Reading and Writing Enhanced** **Three Credits**

This course develops and strengthens students' listening, speaking, reading, and writing proficiency in English. It includes grammar, vocabulary expansion, reading skills, writing mechanics, sentence writing and descriptive, narrative, opinion, and cause/effect paragraphs. In addition to class hours, students must participate in the English laboratory and use a virtual learning platform.

ENGL 152EL **Fundamentals of Reading and Writing Enhanced** **Laboratory** **Zero Credits**

This course develops and strengthens students' listening, speaking, reading, and writing proficiency in English. It includes grammar, vocabulary expansion, reading skills, writing mechanics, sentence writing, and descriptive, narrative, opinion, and cause/effect paragraphs. . In addition to class hours, students must participate in one hour per week of English language laboratory and one hour per week of tutoring/support services.

ENGL 153 @ **Advanced Communicative English** **Three Credits**

This is a performance course designed to improve writing and communication skills in English. Students will learn how to choose a topic, gather information and ideas, create topic sentences, construct a thesis statement, and write four different types of essays. The course also provides writing models, guided structural activities, and integrated grammar lessons.

ENGL 205 **Introduction to Literary Genres I** **Three Credits**

In this course, the students will read, study, and analyze the different prose genres at an introductory level: the essay, the short story, and the novel at an introductory level. They will become familiar with the various strategies and techniques used in literature to enhance expression: style, structure, diction, imagery, narrative point-of-view, and irony, among others.

Key components of the course are students' verbal and written responses and analyses of literature selections.

ENGL 206 **Introduction to Literary Genres II** **Three Credits**

This is an introductory course to the genre of poetry and drama. In order to enhance students' interpretation and appreciation of poems and plays, various strategies and techniques used in English 205 will be applied, in addition to the study of the elements of poetry and drama. The

importance of words, denotation and connotation, imagery, figurative language, tone and musical devices, rhythm and meter, and patterns of traditional poems will be analyzed in poetry; whereas, theme, plot, characters, dialog, music, and visual elements will be discussed in different works of drama. Multiple critical approaches to enrich the examination of the selected literary works will also be used.

ENGL 211-212
Business English I and II
Six Credits

This is a required course for students majoring in business administration. Emphasis is on grammar, as well as oral and written business English. Students will practice writing a variety of business letters; they will also prepare a résumé and participate in role-playing for job interviews.

ENGL 231 @
Research and Writing
Three Credits

Research and Writing is a performance course designed to develop students' skills in academic research and writing. The focus is on the strategies and techniques needed in the process of producing original academic research-based papers. Students will learn how to choose a topic, create a research question and thesis statement, research information, organize ideas, and use technological and library resources. The principal emphasis will be on correct writing of formal English, clarity, organization, and logical development. In addition, all papers will exhibit proper use of current American Psychological Association (APA) norms. Students will receive practical instruction in the adequate use of computerized resources in the SUAGM libraries and in the application of APA norms of academic style and citation of bibliographical sources.

ENGL 245
Introduction to Grammar
Three Credits

This is a required course is a required course for English majors who are planning to be teachers of English as a second language, and also for those who need to improve their mastery of the English grammar. It will give the students sufficient practice exercises to enrich and enhance their skills. The course will also enable the students to attain success in written communication through practice with grammar and language use. The emphasis will be on the traditional approach to grammar.

ENGL 317
English Literature I
Three Credits

This is an intensive reading course in English literature that covers from Chaucer to the neoclassical era and from the Romantic era to the present.

ENGL 321
American Literature I
Three Credits

This is a survey course which offers a chronological overview of the literature of the United States from colonial times to the present.

ENGL 331
Oral Communication
Three Credits

This course deals with the theory and practice of public speaking. It emphasizes the importance of nonverbal communication (body language, eye contact, attire) and verbal techniques (pronunciation, intonation, volume, and rate). Effective interpersonal and intercultural communication is also discussed. Students will practice delivering a variety of speeches, which include self-introduction, personal experiences, informative and persuasive speeches in an organized and coherent manner. Some speeches require the use of visual aids and technology.

ENGL 342
Adolescent Literature
Three Credits

English 342 is an overview of the history and current trends and issues of Young Adult Literature. Strategies, methods, and materials for teaching literature to young adults are examined. It is a required course for students pursuing a degree in Secondary Education in English and prepares students for the Certification requirement of the Department of Education of Puerto Rico.

ENGL 345
Children's Literature
Three Credits

This is a required course focused on preparing students for the English Teachers' Examination, a certification requirement of the Department of Education of Puerto Rico. It comprises an overall presentation of children's literature and its developmental stages from the sixteenth century to the present. It provides a survey of children's literature which includes various authors and illustrators in such genres as the oral tradition, fantasy, realistic and historical fiction, poetry, and the picture book. Future English teachers will acquire techniques and strategies that will prepare them to teach children's literature.

ENGL 360**Comparative Analysis: English and Spanish
Three Credits**

This is a required course focused on preparing students for the English Teachers' Examination, a certification requirement of the Department of Education of Puerto Rico. The course aims to acquaint future teachers with today's concepts of contrastive linguistics, with a view towards raising their awareness of the similarities and differences between selected features of English and Spanish. By understanding particular aspects of both languages and their role in crosslinguistic influence, students will be better prepared to teach language concepts to others.

ENGL 371**Introduction to Linguistics I
Three Credits**

This is a course which introduces future English teachers to linguistic theory, within the context of the other social sciences that seek to describe and analyze human behavior. Emphasis is on gaining an understanding of the different levels of linguistic analysis, which include: phonetics/phonology; morphology; syntax; and semantics.

ENGL 600**Advanced Writing Seminar for Graduate Students
Zero Credits**

This is an advanced writing seminar for graduate students in any stage of their studies. The course will prepare the students by offering with an overview of the necessary academic writing and research skills. In addition, the seminar will include the technical aspects for effective academic writing.

FRCH 101**Basic Course in French I
Three Credits**

The purpose of this course is to familiarize students with the French language and culture through the use of readings, writing, listening, and conversational skills.

FRCH 102**Basic Course in French II
Three Credits**

This course is a continuation of FRCH 101, and which will continue to develop students' knowledge of the French language and culture through the use of reading, writing, listening, and conversational skills.

FRCH 201**Intermediate French I
Three Credits**

The course centers on the study of French grammar and intermediate conversational skills, and includes practice in reading and writing.

FRCH 202**Intermediate French II
Three Credits**

This course is a continuation of FRCH 201, and will study French grammar and intermediate conversational skill. It includes practice in reading and writing.

HIST 221**Ancient and Medieval History
Three Credits**

This course begins with an analysis of some key concepts of the discipline of history (pre-historic and historic). It includes the study of ancient civilizations (Mesopotamia, Egypt, India and China). It explores Greek and Roman civilizations, continuing up to the Medieval period, and culminating with the fall of the Byzantine Empire.

HIST 230**Renaissance, Reform and the Rise of the State
Three Credits**

This course studies the history of Europe between the XV and XVI centuries. The political, social and economic panorama at the start of this period is presented. The Renaissance as a cultural movement is reviewed, the colonization of America as a central event in the European economy of that period is presented, and the Protestant and Catholic Reformations are analyzed. Lastly, the history of Europe in the XVII century and the establishment of the State and its importance in the modern and contemporary age are treated. The student will obtain a general and panoramic vision of the historical origins of the West.

HIST 231**European History XIX Century
Three Credits**

The course deals with the development of liberalism, nationalism and industrialization in conflict with authoritarian forces that were prevalent on the continent during the XIX century. Topics include the development of nations and international rivalry leading to World War I.

HIST 232**Contemporary World Problems
Three Credits**

The course centers on the problems of the contemporary world and the consequences that these entail as seen in the context current events. Events occurring throughout the 20th and 21st centuries are discussed. The Cold War, colonialism, neocolonialism and globalization are discussed.

HIST 253 @**History of Puerto Rico (Compendium)
Three Credits**

The course is a compendium of the history of Puerto Rico from prehistory to the present. It begins with a discussion of the principal geographical aspects of Puerto Rico. Socio-

economic, political, cultural, and religious issues will also be analyzed and interpreted from a panoramic perspective.

HIST 257

Puerto Rico in the XX Century

Three Credits

The course deals with political, economic, social, and cultural problems beginning with the American sovereignty in 1898 up to the present.

HIST 261

Latin American History I

Three Credits

The course centers on the historical evolution of the countries that form Latin America from Precolumbian culture to the XVIII century; the important geographical elements that influenced this development; economic, social, cultural, and religious life of the colonies from the XV to XVIII centuries; the ideas of the illustration, the reforms that took place in the colonies, and the consequences of these reforms.

HIST 262

Latin American History II

Three Credits

The antecedents of the independence movements are studied. The events in Spain at the start of the XIX century and their repercussions in the colonies, the principal leaders, and the most important and dramatic events in the wars for independence are also discussed. The political, economic and social situation of the Latin American nations from the XIX to the XXI centuries. The political, social, economic and cultural current of present Latin America is studied.

HIST 271

History of the United States of America I

Three Credits

The course centers on the study of the development of the United States from its formation to the Reconstruction in the second half of the XIX century is studied. The evolution of political, social and economic institutions of the nation and the distinctive traits of its society are emphasized. Its formation during the colonial period, the Revolution, the growth of the young colony, The Civil War and Reconstruction will be analyzed.

HIST 273

History of the United States of America (Compendium)

Three Credits

The course presents the development of the American nation from the beginning of its society to the present. It emphasizes the evolution of political, social, and economic institutions, and the distinctive traits of its society.

HIST 305

History of the Caribbean

Three Credits

The historical evolution of the Caribbean region in the centuries elapsed from its pre-Columbian origins to the present are studied, as well as the geographical aspects of the islands, their conquest and, colonization by European interests. The political, socio-economic and cultural aspects of the region are analyzed, as well as the hegemony of the United States over the Caribbean up to present time.

HIST 320

History of Africa

Three Credits

This course focuses on the historical development of Africa from its origins to the present, as well as the continent's geography. It emphasizes the origins of African culture and the historical sources. The colonial period, the struggle for independence and the emergence of new national states framed in the present historical context and their role in world problems are also studied. The problems currently faced are discussed, highlighting the political, socio-economic and cultural aspects, as well as the historical processes, cultural and traditional values, beliefs and customs that have influenced the development of humanity. The relationship, contributions and importance of Africa for Puerto Rico throughout history are discussed.

HUMA 111

Civilizations and Universal Culture I

Three Credits

The course analyzes the development of the human being with emphasis on culture, arts, philosophy, religions and ideas, thus encouraging students to understand the differences between countries and societies from their origins until the Middle Ages.

HUMA 112

Civilizations and Universal Culture II

Three Credits

The course centers on the development of the human beings with emphasis on culture, arts, philosophy, religions and ideas. Students are encourage to understand the differences between countries and societies from the Renaissance to the present.

ITAL 101

Introduction to Italian I

Three Credits

This is an introductory course which will familiarize students with the Italian language and culture.

ITAL 102
Introduction to Italian II
Three Credits

This course is a continuation course of ITAL 101. It will further develop students' language skills in Italian.

ITAL 201
Intermediate Italian I
Three Credits

The course deals with grammar, reading, writing, and conversation in Italian.

ITAL 202
Intermediate Italian II
Three Credits

This course is a continuation course of ITAL 201 and will further develop Italian grammar, reading, writing, and conversation skills.

LAGE 110
Introduction to Professional Development
Three Credits

This course aims to prepare students to transition into the professional world or to continue their studies in a bachelor's degree program. It will provide students with the knowledge necessary to conduct employment searches or searches for bachelor's degree programs. Students will also learn to write and disseminate cover letters, resumes and university application essays, and to effectively prepare for professional or academic interviews.

MATH 120
Introductory Algebra
Three Credits

The course deals with elementary algebra topics such as: theory of sets, real numbers, algebraic expressions, equations, linear inequalities and operations with polynomials.

MATH 120E
Introductory Algebra Enhanced
Three Credits

This course aims to develop students the basic mathematical competencies in the following areas: arithmetic, algebra and geometry. The main topics covered are: arithmetic operations, equations and linear inequalities, area and perimeter of polygons and circles, and volume of solids. Special emphasis is placed on problem solving. In addition to the conference and laboratory hours, the student will practice independently using a virtual platform.

MATH 120EL
Introductory Algebra Enhanced Laboratory
N/A Credits

This course aims to develop students basic mathematical competency in the following areas: arithmetic, algebra and

geometry. The main topics covered are: arithmetic operations, equations and linear inequalities, area and perimeter of polygons and circles, and volume of solids. Special emphasis is placed on problem solving. In addition to the conference and laboratory hours, the student will practice independently using a virtual platform.

MUSI 101
Music Appreciation
Three Credits

The course centers on music as a source of aesthetic enjoyment. Students learn to recognize the forms of musical composition (folk and art songs, the fugue, the sonata, the symphony, the opera, etc.) through lectures, recordings, and demonstrations by the professor, other students, or guest artists.

MUSI 103
University Choral Ensemble I
N/A Credits

The course prepares students for the interpretation of chamber choral music as part of the Universidad Ana G. Méndez-Recinto de Gurabo Chorus. The course includes the rehearsal and performance of academic works from the universal choral repertoire, as well as popular and folkloric music. The skills are developed by means of weekly rehearsals and intensive workshops in score sight-reading and vocal technique for choral ensembles. Moreover, as part of the educational experience the chorus presents concerts and participates in institutional activities, as well as other cultural events.

MUSI 104
University Choral Ensemble 2

The course prepares students for the interpretation of chamber choral music as part of the Universidad Ana G. Méndez-Recinto de Gurabo Chorus. The course includes the rehearsal and performance of academic works from the universal choral repertoire, as well as popular and folkloric music. The skills are developed by means of weekly rehearsals and intensive workshops in score sight-reading and vocal technique for choral ensembles. Moreover, as part of the educational experience the chorus presents concerts and participates in institutional activities, as well as other cultural events.

PORT 101
Introduction to the Study of Portuguese I
Three Credits

PORT 101 aims to familiarize and guide students in their first contact with the Portuguese language and Brazilian culture. It focuses on basic pronunciation and intonation knowledge; as well as, the acquisition of essential everyday lexicon and grammar rules necessary for effective communication. An initial contact with the Brazilian culture through the use of cultural elements such as: music, literature, and carnival will also be provided. Additionally, fundamental differences

between the Portuguese language spoken in Brazil and in Portugal will be examined.

PORT 102

Introduction to the Study of Portuguese II

Three Credits

PORT 102 continues to present basic knowledge that allows students to achieve effective communication in conversational Portuguese. Activities and readings will be presented to improve pronunciation, intonation, comprehension, and basic writing skills. Additionally, students will be exposed to Brazilian culture through the study of: soap operas, ecology, education, cities, and legends, among others.

PHIL 201

Introduction to Philosophy I

Three Credits

Study of the nature and development of philosophical thoughts and its problems. Studies the principal philosophers from Greece to the present.

SOSC 111

Individual, Community, Social and Ethical Responsibility I

Three Credits

This course centers on the historical development of the social sciences and their relevance in contemporary society. It emphasizes the study of individuals as members of a community. Their social, biological, cultural and psychological dimensions, along with their ethical and social responsibilities, will also be examined.

SOSC 112

Individual, Community, Social and Ethical Responsibility II

Three Credits

This course analyzes the experience of the individual as a member of a community: civic, political, economical and environmental dimensions along with their ethical and social responsibilities will be addressed.

SPAN 107

Fundamentals of Reading and Writing Bilingual I

Three Credits

The course emphasizes the development of reading, writing, and speaking skills of for students of Spanish as a second language. The course gives emphasis to vocabulary enrichment and grammar from a bilingual point of view. Students are required to attend a weekly session in the language laboratory.

SPAN 108

Fundamentals of Reading and Writing Bilingual II

Three Credits

This course is a continuation course which continues to develop students' reading, writing, and speaking skills in Spanish as a second language. It will cover writing techniques to develop paragraphs, letters, and résumés.

SPAN 141

Spanish as a Foreign Language I

Three Credits

This course aims to guide students in their first contact with the language and culture of Puerto Rican Spanish. The course will present basic concepts in language and culture which will allow students to achieve effective oral communication in Spanish. It also focuses on the teaching of pronunciation and intonation of the Spanish language. Additionally, the course concentrates on the acquisition of vocabulary needed for daily use, as well as the use of vocabulary in context. In addition to the class contact hours, students will engage in independent practice in a virtual platform.

SPAN 152

Fundamentals of Reading and Writing

Three Credits

This course develops paragraph writing skills, as well as the structure, the characteristics, and methods for the organization of ideas through the reading and analysis of texts. Basic elements of communication and the Spanish language are studied, in addition to the features of narrative and descriptive discourse.

SPAN 152 I

Fundamentals of Reading and Writing Enhanced

Three Credits

This course develops paragraph writing skills, as well as the structure, the characteristics and methods for the organization of ideas through the reading and analysis of texts. Basic elements of communication and the Spanish language are studied, in addition to the features of narrative and descriptive discourse. As a support to the class, the student must attend the language laboratory for tutoring, and will practice independently with a virtual platform.

SPAN 152 IL

Fundamentals of Reading and Writing Enhanced Lab

Cero Credits

This course develops paragraph writing skills, as well as the structure, the characteristics and methods for the organization of ideas through the reading and analysis of texts. Basic elements of communication and the Spanish language are studied, in addition to the features of narrative and descriptive discourse. As a support to the class, the student must attend the language lab for tutoring, and will practice independently with a virtual platform.

SPAN 201-202

Business Spanish I and II

Six Credits

The course aims to develop communication skills directed at business correspondence. Emphasis is on the contribution

of logic, psychology, ethics, and grammar to communications.

SPAN 213

Literary Genres I

Three Credits

This course deals with the characteristics of literary language, poetry, drama, and the essay. Illustrative works of each of these literary genres will be analyzed. The course will expose the students to language as a means for artistic creation, and will provide the students with reading strategies to develop an active approach, to reading not only of literary texts, but of any kind of discourse.

SPAN 214

Introduction to Literary Genres II

Three Credits

This course deals with the characteristics of the narrative genres, especially that of short stories and novels. The process of evolution of these genres will be studied, and illustrative works of both genres will be analyzed. The course will expose the students to language as a mean for artistic creation, and will provide the students with reading strategies to develop an active approach to reading, not only of narrative texts, but of any kind of discourse.

SPAN 215

Advanced Composition

Three Credits

The course emphasizes the development of the skills needed to write logically and correctly. Research techniques will also be covered.

SPAN 221-222

Spanish Literature I and II

Six Credits

This course is a panoramic view of Spanish Literature from its origins up until the beginning of the Spanish Renaissance. Special attention will be placed on the distinctive features of Spain's historic and cultural background until the end of the Medieval times. Illustrative texts from this period will be read and analyzed. On the second semester the students will be exposed to a diachronic view of Spanish literature from the Renaissance (16th century) to the so-called Generation of '98 (beginnings of the 20th century). The main authors and works of these literary periods will be studied, taking into consideration their historical and cultural context.

SPAN 230

Introduction to Linguistics

Three Credits

This course studies some general aspects of the origin of modern linguistics, the history and evolution of Spanish linguistics, and the main elements of the study of language. The course is based on the notion of language as a linguistic sign. The topics of language acquisition and language variations, which depend on geographic, social and individual aspects, will also be considered.

SPAN 250 @

Writing Techniques

Three Credits

This course will develop oral and writing skills, which will enable composition at the university and professional level. Diverse strategies will be used for the reading and writing of expository, argumentative and professional texts.

SPAN 255 @

Research and Writing

Three Credits

This course aims to develop students research and advanced academic writing skills. Throughout the course, the process of critical inquiry (the selection of a topic, statement and resolution of a hypothesis, and the search, revision and use of data, its revision and use) will be covered. In addition, the writing (pre-writing, organization of details, edition, correction, re-writing), will be emphasized.

SPAN 265

Advanced Grammar

Three Credits

This course is an in-depth study of the morphological and syntactical aspects of the Spanish language.

SPAN 290

Language and Culture of Puerto Rico

Three Credits

This course aims to immerse students in the language and culture of Puerto Rican Spanish. The course will present basic concepts in language and culture which will allow students to achieve effective oral communication in Spanish. It will also focus on the teaching of phonetics, pronunciation and intonation of the Spanish language. Additionally, the course concentrates on the acquisition of vocabulary needed for daily use, vocabulary in context, reading and writing for daily communications. In addition to the classroom experience, students will engage in several real-world dialogues (on and off campus) with community members and experts in the fields of business, health, education, culture and the fine arts. The course also requires students to participate in a virtual platform in and outside of the classroom.

SPAN 323

Spanish Literature

Three Credits

The course covers Spanish literature from the Golden Century to the present.

SPAN 331

Oratory and Speech Communication

Three Credits

This course will develop students' skills in performing effective oral presentations both in their personal and professional life. Through practice and theoretical discussions, using examples and showing diverse strategies

and styles, the course will help them develop a critical sense about the essence of an effective oral presentation.

SPAN 453

Puerto Rican Literature

Three Credits

This course will deal with the main literary movements, authors and works of Puerto Rican literature. It will discuss the evolution of Puerto Rican literature from the Colonial period to the present.

SPAN 463

Spanish-American Literature

Three Credits

This course will deal with Spanish American Literature and its origins since the 15th century up to the present. The main authors and works of these literary periods will be studied, taking into consideration their historical and cultural context.

*Students will be placed into appropriate levels by CEEB scores or by department placement exams.

Note: Literature courses need not be taken in numerical order.

SPAN 490

Language and Culture of Puerto Rico II

Three Credits

This course aims to immerse students in the language and culture of Puerto Rican Spanish. The course will present concepts in language and culture which will allow students to achieve effective written and oral communication in Spanish. Additionally, the course will concentrate on the acquisition of advanced linguistic skills for social, professional and academic purposes. In addition to the classroom experience, students will engage in several real-world dialogues (on and off campus) with community members and experts in the fields of business, health, education, culture and the fine arts. The course also requires students to participate in a virtual platform in and outside of the classroom.

SPAN 600

Advanced Writing Seminar for Graduate Students

Cero Credits

This is an advanced writing seminar for graduate students in any stage of their studies. The course will prepare the student with the necessary academic writing and research skills. In addition, the seminar will include the ethical and technical aspects for effective academic writing.

UT's School of Business and Entrepreneurship academic offer ranges from certificates to doctoral studies. Programs have been designed taking into consideration the needs and requirements of the industrial, entrepreneurial, professional and public sectors in the Island. The general areas of specialization in its academic programs are: Entrepreneurship, Management, Marketing, Accounting, Information Management and International Business. Other academic tracks such as quality, taxation, human resources and materials are offered under the main areas of specialization.

The School has a visiting faculty in the Management and Management Information System programs proceeding from countries such as: Spain, Mexico, India and the United States. Its full-time faculty is integrated by highly competitive members, most of whom have doctorate degrees.

In the interest of achieving its objective of providing the student with a global business vision, the School of Business and Entrepreneurship maintains relationships and collaborative agreements with prestigious universities around the world.

PARTICIPATING INTERNATIONAL ORGANIZATIONS

- Consejo Latinoamericano de Administración de Empresas, CLADEA
- AACBS International Academy of International Business

- Red Latinoamericana Emprendedora
- World Economic Forum (WEF)

COLLABORATIVE RELATIONS WITH OTHER INTERNATIONAL BUSINESS SCHOOLS

- Universidad Veracruzana
- Instituto Politécnico Nacional de Méjico
- Universidad de las Américas, en Puebla
- George Washington University
- Instituto Tecnológico de Monterrey
- Universidad Autónoma de Madrid
- Universidad Politécnica de Madrid
- Universidad de San Pablo
- Groupe ESC Toulouse
- Oslo School of Management in Norway
- Argosy University
- Florida International University
- Other institutions in process in: Spain, Peru, Brazil, Chile, United States and Costa Rica.

SPECIALIZED ACCREDITATIONS

On April of 2011, the School of Business and Entrepreneurship has earned the specialized accreditation awarded by the "Association to Advance Collegiate Schools of Business" (AACSB, International). The School thus positions itself as the only institution to have that accreditation in Puerto Rico and the Caribbean. AACSB accreditation is the hallmark of excellence in business education, and has been earned by less than 5% of the world's business schools. The school renewed its accreditation status in 2016.

MISSION

The Mission of the School of Business and Entrepreneurship at the Universidad Ana G. Méndez-Recinto de Gurabo is to develop professionals, leaders and academics with a superior theoretical knowledge and practical skills for the creation and development of new enterprises and effective management of existing business. Our students acquire the skills, values and sense of social responsibility in their business practices through education that is entrepreneurial in spirit, ethical in its approach and global in orientation. Excellence in teaching is enhanced by a faculty committed to professional development, intellectual contributions and service. As a professional school of business, we want to have a positive impact on the society, organizations and the communities of which our students and alumni are a part.

VISION

The vision of the school is to be the leading school in business education and research in Puerto Rico and the Caribbean and the preferred partner for successful alliances for the government, private sector and non-profit organizations, both national and international.

STUDENT ORGANIZATIONS

- Association of Office Administration Students
- Association of Accounting Students
- Association of Administration & Materials Control Students
- Association of Information Systems Students
- Association of Management Students
- Association of Trade Students
- Student Chapter of the Chamber of Commerce

The different student associations in the School of Business and Entrepreneurship are created in order to foster unity and communication among the students, professors and professionals in the Business Administration area. Students have the opportunity to express their ideas and to participate in activities promoting their professional development. This gives students the opportunity to demonstrate qualities and characteristics which contribute to the success of all good employees and citizens. Students participate in activities both within and outside the Institution. Thus, students are offered opportunities to visit companies, to attend conventions and to participate in university competitions related to their profession.

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN BUSINESS ADMINISTRATION IN ACCOUNTING

Graduates of the associate degree in Business Administration in Accounting will be able to coordinate and carry out related rules and practices of accounting activities. Among the activities of the accountant are: preparation of financial statements, cost analysis, assessments, and audits, among others. This rigorous professional, accurate and timely manner produces and provides information to its customers, private and government agencies and the general public, for economic and financial decision making.

BACHELOR'S DEGREE IN BUSINESS ADMINISTRATION WITH CONCENTRATION IN MARKETING

This major promotes technical competition and the development of skills to carry out market research, to prepare business plans, sales projections and promotional campaigns. The graduate can work in advertising agencies, public relations firms, market research firms and sales departments in diverse companies.

**BACHELOR'S DEGREE IN BUSINESS ADMINISTRATION WITH
CONCENTRATION IN OFFICE TECHNOLOGY MANAGEMENT**

This program provides fundamental information for students and the knowledge of Microsoft applications that is required in the employment market and for management competence. Graduates will be able to develop and design electronic publications and commercial pages on a network. They will also be able to work with portal workflow management to design, develop and maintain virtual projects. This program is unique, as it includes management courses and end-user office technology.

COURSE DESCRIPTIONS

(Courses marked with @ could be offered in both modalities, traditional or on-line.)

ACCO 101

Business Mathematics

Three Credits

The course centers on basic mathematics skills to prepare students for accounting and finance courses. This course reviews percentages, simple interest, compound interest, discounts, commissions and proportions.

ACCO 109

Basic Accounting for Non-accountants

Four Credits

The course centers on the study of basic accounting concepts and principles with the purpose of understanding their application through the analysis of financial reports. Decision making is considered, based on the knowledge of basic concepts within an ethical framework that includes: the nature of accounting, the structure of financial statements, the accounting cycle, income determination for a merchandising business, register control and valuation of accounts and notes receivable, cash and inventories.

ACCO 110

Basic Accounting for Non-Accountants II

Three Credits

The course centers on the study of basic accounting concepts and principles with the purpose of understanding their application through the analysis of financial reports. It focuses on decision-making based on knowledge of fundamental concepts within an ethical framework that includes: nature of the operating assets and their impact on financial reporting; recognition of current liabilities, contingencies and concept of interest; identification, characteristics, importance and effects of long-term debt. Course content includes the shareholders' equity concept, components, characteristics and differences among various types of shares, dividends, classification and impact on cash and equity from shareholders. Content also includes recognition of the fundamentals differences among organizational structures such as corporation, partnership and sole proprietorship.

ACCO 111

Introduction to Accounting I

Three Credits

The course introduces the basic principles of accounting theory and practice, emphasizing the sole-proprietorship form of business. Primary areas of study include the nature of a business, the accounting equation, the theory of debit and credit, preparation of financial statements, adjusting process, the accounting cycle, special journals, accounting

for merchandise business, inventory, internal control for cash procedures, and receivables.

ACCO 112

Introduction to Accounting II

Three Credits

The course centers on the study of accounting for fixed assets and intangible assets, as well as current liabilities, with an emphasis on the payroll accounting system. The course discusses how partnership and corporations are structured and formed. Cash flow activities reported in the statement of cash flows are described.

ACCO 113

Introduction to Accounting III

Three Credits

The course centers on accounting for issuance of common stock, preferred stock, and the items reported in retained earnings. Content includes accounting issues related to the long-term liabilities (bonds, notes payable, and leases). The accounting treatment for investments in debts and stock, and the implications for the company are discussed. Cash flow activities reported in the statement of cash flow are also discussed. Financial statement analysis, and its effect on decision-making is also considered.

ACCO 301

Intermediate Accounting I

Three Credits

The course centers on the study of general accepted accounting principles, according to the presentation of accounting information in the financial statement and related notes. Course content includes journal entries, working papers, adjustments, the financial statement, and valuation of assets and liabilities. The course also includes the study of procedures and principles followed in the presentation of the owner's equity and income determination.

ACCO 302

Intermediate Accounting II

Three Credits

The course centers on the study of general accepted accounting principles, according to the presentation of accounting information in the financial statement and related notes. Course content includes journal entries, working papers, adjustments, the financial statement, and valuation of assets and liabilities. The course also includes the study of procedures and principles followed in the presentation of the owner's equity and income determination.

ACCO 303

Cost Accounting

Three Credits

The course centers on the study of the roles of accountants in the organization. It emphasizes the contribution of management accountants to the implementation of strategies related to the value chain, control systems and planning. The concept of professional ethics and its potential conflicts is discussed. The course introduces terminology and cost purposes, and emphasizes the relationship of costs and the concept of relevant range. It includes analysis of cost-volume-profit, and presents different methods to calculate it. The course also presents the break-even analysis and the role of collaboration in decision making. The course culminates with the presentation and discussion of the systems, job order and process cost system.

ACCO 304

Auditing

Three Credits

The course is a review of accounting theory, auditing procedures, worksheets, internal control and fraud, preparation of financial statements, reports, forms, methods and procedures. Attention is given to the nature and purpose of auditing, auditing standards, professional conduct, auditors' legal liability and the approach followed in performing audits of financial statements. Special attention is devoted to auditors' decision processes in internal control, auditing sampling, and accumulative audit evidence.

ACCO 305

Income Tax for Puerto Rico I (Individuals)

Three Credits

The course centers on the study of income tax, its history and its purpose. Topics include the tax laws of Puerto Rico, inclusions and exclusions, and allowable deductions. Practice in filing individual, corporate partnership returns is provided.

ACCO 306

Accounting Information Systems

Three Credits

The course centers on the study of concepts, methods and tools used in the design of accounting information systems, and the function of budgeting in the management and control of business activities. Requires laboratory.

ACCO 307

Auditing II

Three Credits

Students will study the audit process, focusing on the practical part of procedures and emphasizing Risk Assessment SAS (SAS 104-111). Content includes the planning of the audit using analytical procedures, determination of materiality and risk, internal auditing controls, and fraud. Implementation of the processes of audit cycles in sales and collection, as well as other cycles such as payroll, disbursements, accounts payable, property, plant and equipment, prepaid expenses, accrued expenses and income and expenditure accounts, inventory, notes

payable and capital accounts and cash. Finally, students learn about completing the audit process, reviewing contingencies and commitments, issuance of the auditor's report and subsequent events.

ACCO 308

Accounting Theory

Three Credits

Students will study accounting theory and its effect on the profession, recent changes in accounting practices, procedures and conflicting points of view. The course includes interpretation and critical analysis of reports, statements and other accounting activities.

ACCO 310

Forensic Accounting

Three Credits

This course presents the concept and development of Forensic Accounting (FA) through an analysis of its trends and institutions. Students also learn how research and fraud detection are conducted in this area. To fulfill this objective, each FA crime will be identified and explained; the methodology used to detect these crimes will also be studied. The main topic analyzed involves litigation services provided by accountants through proper evidence management and calculation of commercial damage. The course emphasizes a profound analysis of cyber crime. Students also learn the methodology of correct business valuation. Finally, practical cases are discussed in order to promote understanding of principles, unusual procedures, and relationships of FA.

ACCO 315

Intermediate Accounting III

Three Credits

This course provides a critical analysis of generally accepted accounting principles (GAAP), concepts, and theory underlying the preparation of financial statements. Emphasis will be placed on current theory and practice. The primary concern is with asset measurement and income determination.

ACCO 320

Federal Taxes I

Three Credits

Students will study the history and objectives of the federal income tax system. Topics include basic concepts of federal taxes, the various types of federal income tax returns, accounting periods, accounting methods, income computation and method of filling out tax returns.

ACCO 321
Federal Taxes II
Three Credits

Students will study taxes on federal income, as well as the regulations applicable to corporations and societies. The course also includes topics related to taxes on inheritances and donations.

ACCO 340
EDP Auditing
Three Credits

The course centers on auditing, assurance and internal control, information technology governance, operating systems and networks, data management systems, system evaluation and control, processing financial reporting system, computer-aided audit tools, data structures, revenue and expenditures cycle tests of controls and substantive testing.

ACCO 350
Computerized Accounting Systems
Three Credits

This course is designed to teach how the computer can be used as an accounting tool. It is not intended to teach any new accounting concepts, but rather how accounting procedures can be applied through computer applications with the use of a general ledger software package. Also included are modules for accounts receivable and payable, and asset management. In introducing the computer as an accounting tool, students will be given the criteria to evaluate accounting software. Students will learn how to use the computer for both general ledger and subsidiary ledger transactions. General journals and special journals will be used. Most course work will be completed in the computer lab during class hours.

ACCO 360
Corporate Governance
Three Credits

This course presents and introduces the student to the corporate world, especially with details of their key players. It includes discussions of the importance of corporate governance for the twenty-first century, rights and obligations, as well as, the legal and ethical challenges to the board of directors. Emphasis is placed on monitoring the implementation and administration management and ensuring the effectiveness of the board of directors. It also presents aspects of corporate governance and international non-profit institutions vis-à-vis the American model.

ACCO 391
Cost Accounting II
Three Credits

This course presents the Activity Based cost accounting system and its management, considering design,

manufacturing and distribution processes. It includes simple cost accounting using a single indirect cost pool and the five-step decision making process. The course considers master budgets and operating budgets, taking into account the timing advantages and the responsibilities involved in the implementation. The inventory costing using variable, absorption and throughout methods is also part of the course. Strategies and the balanced scorecard in the profitability analysis are emphasized. The course also includes cost allocation and method analysis for different departments.

ACCO 395
Managerial Accounting I
Three Credits

The course centers on studying the managerial tools that owners, managers, and investors have in order to make decisions. It includes topics related to managerial accounting and business organizations, cost behavior and cost-volume relationships, measurement of cost, cost management systems, and activity based costing. In addition, it includes relevant information and decision making related to marketing decisions and production decisions.

ACCO 396
Managerial Accounting II
Three Credits

This course is the second part of ACCO 395. It provides students with methods to report managerial information to internal users of the firm. Budgeting, standard cost systems, reporting and analyzing performance, management control systems, flexible budget systems, variance analysis are among the contents covered. The student taking this course will acquire a basic understanding of the most commonly used methods for using information from the firm's accounting and information systems to assist in making important managerial decisions.

ACCO 402
Advanced Cost Accounting
Three Credits

The course centers on the application of principles, systems and procedures of cost accounting, including historic and standard procedures for decision-making.

ACCO 405
Puerto Rico Taxes II
Three Credits

The course centers on the study of the Puerto Rico Income Tax Law regarding corporations and special partnerships. Content also includes Municipality Patents Law, Properties Law, Excise Tax Law, State Unemployment Law, and State Disability Insurance Law. Several federal laws applicable to Puerto Rico are also included. They are FICA Tax, FUTA Tax, and Medicare law.

ACCO 406**Puerto Rico Taxes III-Corporation & Partnerships****Three Credits**

This course presents an introduction to the Puerto Rico Income Tax Law regarding corporations and partnerships. Themes to be covered include the characteristics and differences between the diverse types of entities within a framework of tax law.

ACCO 420**Government and Nonprofit Accounting I****Three Credits**

The course includes discussions of the characteristics and types of G&NP organizations. The objectives of G&NP accounting and financial reporting are an essential part of the course. Topics presented include authoritative sources of G&NP accounting principles and reporting standards. In addition: as well as concepts, objectives and characteristics of SLG accounting and financial reporting, characteristics of SLG accounting and financial reporting and the fundamental features of the SLG accounting and financial reporting model. Special attention is given to: general fund and special revenue funds and general fund accounting. The course will help students understand the preparation of the financial statements proper to governmental and nonprofit organizations. A very special subject in the course is the government budgetary perspective, budgetary accounting and reporting, budget comparison schedule or statement of revenues, expenditures, and changes in fund balance, as well as budgetary entries, budgetary planning, control, and evaluation, basic budgetary terminology, budgetary approaches and emphases, and budget preparation constitutes a very special subject in the course.

ACCO 421**Governmental and Nonprofit Accounting II****Three Credits**

The course presents the Activity Based cost accounting system and its management considering design, manufacturing and distribution process. It includes simple cost accounting using a single indirect cost pool and the five-step decision making process. The course considers the master budgets and operating budgets taking into account the timing, advantages and the responsibilities in the implementation. The inventory cost analysis using variable, absorption and throughout methods is also part of the course. Strategies and the balanced scorecard in the profitability analysis are emphasized. The course also includes the cost allocation and methods analysis for different departments.

ACCO 425**State and Local Government Auditing****Three Credits**

The course presents financial reporting, financial reporting entity, general audit considerations, cash, investments, and derivative instruments, revenues and receivables, capital assets, interfund, internal, and intra-fund activity and balances, expenses or expenditures and liabilities, net position and financial statement reconciliation, concluding the audit, and audit reporting.

ACCO 430**Not For Profit Entities Auditing****Three Credits**

The course is an overview and introduction of audit considerations. It includes general, financial reporting, cash and cash equivalents, contributions received and agency transactions, split interest agreements, investments, property plant and equipment and other assets, debt and other liabilities, net assets, revenues and receivable, audit reports and tax considerations.

ACCO 450**Advanced Accounting I****Three Credits**

Students will study problems related to partnerships, parent corporations and subsidiaries, selling on consignment, long contracts and consolidated financial statements, foreign operations, concepts of present value, and related accounting theories.

ACCO 453**Project****Three Credits**

This will be the most important experience in the academic life of students of the bachelor's degree. Students must synthesize and apply knowledge from an accounting perspective in simulated and practical situations in different scenarios. The financial decisions will be inspected from an integral perspective of the variables that affect them and are included in the specialty courses. Methodological strategies could include a classroom workshop, a research seminar, an individual or team project or a creative task carried out in a studio, a laboratory or a specific accounting research area.

ACCO 454**Accounting Internship****Three Credits**

The accounting internship is designed to provide external capstone experience for accounting students. The internship is a mutual agreement between both a student and an organization/employer to gain a unique and practical real world experience. The employer agrees to offer tangible duties and the student agrees to fulfill the duties to the best of his/her abilities. Interns will complete 200 hours of work during the same semester, these may be paid or unpaid. Students will have the opportunity to increase their

professional skills, put academic learning into practice, and gain an understanding of the role accounting plays in today's business environment.

ACCO 455

Advanced Accounting II Three Credits

The course includes/understands the study and analysis of problems, related to societies, bankruptcies of companies, trusts, foreign quasiorganizations, operations, personal financial statements and other advanced topics of the financial accounting..

FSBE 105

Freshman Seminar Three Credits

This course will provide students with activities, techniques and academic experiences in terms of the discipline they are studying. Students will able to identify and develop personal and academic skills to improve their performance.

COIS 101

Introduction to Computer-Based Systems Three Credits

The course is an introduction to computers and electronic data processing. It includes historical development, data organization, storage systems and types of peripheral devices, as well as data input and output. Students are introduced to microcomputer use and applications, word-processing, and spreadsheets. Requires laboratory.

COIS 102

Programming Principles Three Credits

The course is a practical and theoretical introduction to basic programming principles. It includes development of logic, as well as the use of flow charts, structured flow charts and pseudo codes. Students will become familiar with editing and compiling programs.

COIS 106Hw

Business Programming in BASIC Four Credits

The course centers on programming principles, emphasizing practical applications in business using BASIC. Structured programming techniques will be developed along with appropriate documentation for the programs, including flowcharts, hierarchy charts, and documentation sheets for the program and its modules. Requires laboratory.

COIS 107

Programming in COBOL Four Credits

The course is an introduction to computer programming in a business environment, emphasizing structural design of programs, development, testing implementation and documentation of common business applications in COBOL. Requires laboratory.

COIS 201

Data Processing Principles Three Credits Hours

The course is an introductio to computerized systems, their uses, and their benefits in Business Administration. Topics include the study of the basic concepts and technical terms in the field of information systems. The course also provides the opportunity for using applications in word processing, spreadsheets and graphics. Requires laboratory.

COIS 213

Advanced Programming in COBOL Three Credits

The course is an introduction to advanced programming techniques in COBOL. Topic discussed are: program design, module design, sequential and indexed file maintenance table, advanced data structure, character handling, design and production of reports, and program maintenance.

COIS 231

Programming in RPG Three Credits

The course is an overall study of the development cycle of a system, emphasizing the documentation of the present systems. It emphasizes the use of basic and structured tools and techniques to describe processes, data flow, data structures, file design, form design for data gathering, and preparation of reports. Requires laboratory.

COIS 240

Object-Oriented Programming with C++ Three Credits

Study of the fundamental concepts and principles of the object oriented programming language. The course emphasizes an individualized style of modular programming, using object programming. It also promotes the use of extensions coding, modules and applications for the development of competitive skills for today's employment market. Requires laboratory.

COIS 250

Systems Analysis and Design Three Credits

The course centers on the study of the systems development cycle, with emphasis on the present system documentation,

using the classic tools and techniques as well as the structured ones. It includes the use of these resources for describing processes, data flow, data structures, and design of forms for data gathering and reports. Data gathering activities and information, progress reports, and the transition from analysis to design will also be discussed.

COIS 290

Systems Development Workshop

Three Credits

This is a practice course in which student are required to develop a project with a real application. Topics include system analysis, design, programming and implementation of a simple computerized information system.

COIS 301

Programming in FORTRAN

Three Credits

The course centers on programming techniques for development of business applications in FORTRAN. The structure and commands of the language are discussed, with emphasis on topics such as alphanumeric constraints, integer and real variables, logical and arithmetic operations, data management, functions, sub-programs and sub-routines. Requires laboratory.

COIS 350

Structured Design with Object Programming

Applications

Three Credits

The course centers on principles of programming, with emphasis on commercial applications using the Visual Basic programming language. The use of object programming techniques and the appropriate documentation that supplements a computer program. Support documentation includes resources such as: TOE's (Task Object Event), flowcharts, hierarchy charts, decision tables, UML's (unified modeling language) and others. The goal of this course is to provide the beginning programmer with complete coverage of all major introductory programming topics. Requires laboratory.

COIS 360

Telecommunications and Computer Networks

Three Credits

The course centers on telecommunications and computer networks designed for individuals in the field of computerized information systems. The historical development, as well as the concepts, terminology and modern products related to computer networks are described. The criteria for planning, acquisition and installation of computer networks are emphasized. The course also includes the study of protocols, software, topologies, and products available. Strategies of centralized and distributed processing are compared.

COIS 370

Productivity Programs for Microcomputers

Three Credits

Processing, analysis and presentation media and techniques for problem solving using the computer will be studied. The course emphasizes advanced skills dealing with productivity programs, including word processing, spreadsheets, and database application. It also includes the design and development of material for slide presentations, as well as production of graphs or charts using special effects.

COIS 390

Programming in PASCAL

Three Credits

Students will study the concepts, structures and specific commands of PASCAL, directed at programming business application. Topics discussed include top down design, logical and arithmetic operations, types of structured data, recursion, and file management.

COIS 396

Special Topics in Computer Information System

Three Credits

This is an elective course in which students will gain a complete, step-by-step approach for learning the fundamentals of assembly, repairing and troubleshooting computer hardware and software of modern computers. This course maps fully to CompTIA's latest A+ Exam objectives through live experience in class/laboratory lectures and hands on exercises.

COIS 410

Information System for Decision-Making

Three Credits

The course centers on the analysis of high-level information systems, which provide quantitative data from one or more internal or external data banks of the organization to facilitate management decision-making. Theoretical concepts are applied to real life through analysis of specific organizational areas. Requires laboratory.

COIS 420

Introduction to Database Management and Design

Three Credits

This is an introductory course in which the student will learn the fundamentals of database architecture, database systems and database management systems. Hands-on techniques will be used, with emphasis on how to design, create, organize and manage databases within the development of an application program using rapid application development (RAD) method. Its main focus is on the functions of development, modifying and accessing objects within the relational database. The course will include topics in data modeling, the normalization process, the creation of Entity-Relationships Diagrams (ERD's), the application of database structures as well as the hierarchical and network database models. The course will be

complemented with the development of applications using SQL (Structure Query Language), and PL/SQL (Procedural Language/SQL).

COIS 421
PL/SQL Programming
Three Credits

This is a specialty elective course designed to provide a working introduction to PL/SQL programming within the Oracle RDBMS environment. The course begins with basic relational database concepts, the SQL query language, PL/SQL language fundamentals of block program structure, variables, cursors, and exceptions, object creation, including indexes, tables, triggers, and stored procedures, Oracle Forms, Oracle-supplied packages, SQL*Loader, SQL developer, dynamic SQL, and object technology. Students will work with real-life projects. Requires laboratory.

COIS 422
Database Application Development
Three Credits

This is a specialty elective course, which will provide the student the necessary skills to design and create interactive applications through a graphical user interface in an information system complemented by relational database systems. The use of multiple strategies to support the managerial decision making within the company or business will be emphasized using complex reports, charts, complex forms and queries. The course will be complemented with real world scenario applications in which the student will be able to design, develop and implement an application using a graphical user interface that uses all database objects. The course requires laboratory.

COIS 423
Database Administration
Three Credits

This is a major elective course in which the student will be provided with all the necessary tools for the administration, management and development of relational databases. Students will be exposed to the functions and key tasks required as a database administrator in a production environment. They will also have hands-on experience in creating and starting up a database, managing data, implementing security and data integrity measures and granting data access privileges to individual users. Students have the opportunity to learn how to implement database systems in an international environment using national language support; which is provided in the course. Requires laboratory.

COIS 425
Object-Oriented Programming with JAVA
Three Credits

The course centers on the study of the principles and fundamental concepts of the programming language JAVA. The course covers the design of well-structured applications using clear and precise procedures through the use UML. It promotes the effective use of the control structures, and the optimal performance of the operational environment, in applications developed for the Internet. Requires laboratory.

COIS 426
PL/SQL Programming
Three Credits

This is a specialty elective course designed to provide a working introduction to PL/SQL programming within the Oracle RDBMS environment. The course begins with basic relational database concepts, the SQL query language, PL/SQL language fundamentals of block program structure, variables, cursors, and exceptions, object creation, including indexes, tables, triggers, and stored procedures, Oracle Forms, Oracle-supplied packages, SQL*Loader, SQL developer, dynamic SQL, and object technology. Students will work with real-life projects.

COIS 427
Database Application Development
Three Credits

This is a specialty elective course, which will provide the student the necessary skills to design and create interactive applications through a graphical user interface in an information system complemented by relational database systems. The use of multiple strategies to support the managerial decision making within the company or business will be emphasized using complex reports, charts, complex forms and queries. The course will be complemented with real world scenario applications in which the students will be able to design, develop and implement an application using a graphical user interface that uses all database objects.

COIS 428
Database Administration
Three Credits

This is a major elective course in which the students will be provided with all the necessary tools for the administration, management and development of relational databases. Students will be exposed to the functions and key tasks required as a database administrator in a production environment. They will also have hands-on experience on creating and starting up a database, managing data, implementing security and data integrity measures and granting data access privileges to individual users. Students have the opportunity to learn how to implement database systems in an international environment using national

language support; which is provided in the course Requires lab.

COIS 430
System Auditing and Security Management
Three Credits

The course is an introduction to the principles of auditing in computerized information systems. It emphasizes control, types of auditing, auditing techniques and their effective system development. Topics studied include concepts of auditing computing, equipment and operations auditing, security, integrity and privacy of the system. Requires laboratory.

COIS 432
Computer Networks Design
Three Credits

This specialized course is oriented to local area network design. Students will be able to learn the necessary methodologies for the design of computer-based networks using wired, wireless and optical media. They will learn to use application software in a simulation environment to prevent errors and time loss before the computer network installation. This environment will provide the students a knowledge base for diagnosing and anticipating problems that increase the costs and production loss in the business.

COIS 433
Wireless Local Area Networks
Three Credits

This course describes the technologies involved in all aspects of a local area network and how personal devices can interact and communicate with each other. Using a practical approach, the students will learn how a wireless device communicates with a wireless network using protocols and a wireless LAN access point. They will learn how to design, install and troubleshoot a wireless LAN network on a safe-based environment, applying device security management.

COIS 434
Application Development for Mobile Devices
Three Credits

In this course students are initiated to a mobile computing environment. Students will be able to develop tools and applications that access data and information from any device in a network while on the move. The course provides detailed skills for delivering true mobile computing on both the service creation and device fronts. Students are provided a guide through the complex web of acronyms and standards that wireless data runs on. They learn how to detect and diagnose security issues and new emerging technologies.

COIS 435
Data Communications and Computer Networks
Management
Three Credits

The course centers on fundamental elements for the management of computer networks and data communication. The course emphasizes skills development for the design and management of modern communication networks, using digital technology. It also utilizes ideal platforms for data transfer and telecommunications, oriented to client-server services and to the management of applications for the information highway. Requires laboratory.

COIS 440
E-Commerce Methodology and Technology
Three Credits

This course presents the necessary technologies, protocols, and methodologies for the development of e-commerce or e-business. It surveys the various business models that have been introduced in the last few years and analyzes their economic and managerial foundations. The course also covers legal and security issues.

COIS 441
Application Development for E-Commerce
Three Credits

The course provides the skills and methodologies needed for the development of e-business or e-commerce applications.

COIS 442
Portals Integration
Three Credits

This course provides knowledge and skills needed to create and deploy portals. It integrates applications using portals.

COIS 443
E-Commerce Development
Three Credits

This is a capstone course that provides the students the opportunity to plan, design, develop, and deploy an e-commerce site. This course includes setting up and maintaining a website; understanding site structure, presentation, navigation, and content management.

COIS 450
Information Systems Development Project
Three Credits

The course centers on the application of concepts, principles and practices of systems development and programming techniques in the development of an information system. Project management methodology, scheduling, task control, formal presentations and group dynamics are used to solve system design problems. Required files are designed and a program to implement the system is developed. Requires laboratory.

COIS 470**Web Applications Programming****Three Credits**

This course covers planning and development of home pages on the World Wide Web. Techniques for applications written in PHP with database interaction using MySQL are presented, as well as more complex pages than those developed with HTML. Cases studies are discussed and analyzed.

COIS 471**Web Portal Development****Three Credits**

This is a major course that provide the knowledge and skills to plan, deploy, and manage web portals. The students will learn how integrate application into a portal framework and build web pages.

COIS 472**E-Commerce Object Oriented Programming****Three Credits**

This course covers business issues related to electronic commerce, such as models for B2B and B2C electronic commerce, electronic payment mechanisms, technology infrastructure, privacy and competitive advantage.

ECON 121-122**Economic Principles and Problems I and II****Six Credits**

The course covers economic theories and practice: value and price, exchange, distribution, production, employment, national income, international commerce, public expenses, economics cycles, social welfare and the influence of government on the economy.

ENTR 360 @**Entrepreneurship****Three Credits**

This course provides students the opportunity to apply the basic concepts of small business management using a teambuilding approach with participants from different disciplines. Different aspects for management of a small business will be studied, with emphasis on the formulation of solutions applicable to specific entrepreneurship problems. The preparation of a group project, including strategies and tactics for the development and administration of a small business will be required.

ENTR 401**Identification and Assessment of Business****Opportunities****Three Credits**

Students will learn the concepts, techniques, and skills necessary to identify the two approaches to recognize entrepreneurship opportunities. Techniques for feasibility studies, development of a new business, and strategies for

firm growth will be presented. In addition, personal characteristics needed to be a successful entrepreneur will be discussed.

ENTR 402**Design and Organizational Structure for SMEs****Three Credits**

The course is designed to develop capabilities required to manage organizational design and change in organizations, specifically SMEs. The main objective of the course is to introduce students to concepts of organizational theory, including design, change, and conflict, among others. These concepts and techniques of organizational behavior will be applied in the context of SMEs, through an examination of the challenges and characteristics of these firms.

ENTR 403**E-Commerce and Design of Systems and Networks****Three Credits**

The course provides the principles and practices for the development of e-commerce and network systems design. It will familiarize the student with the basic concepts involved in different types of e-commerce applications.

ENTR 404**Business Development of biotechnology and****Industrial Health****Three Credits**

The course is designed to develop capabilities required to start companies in biotechnology. It also addresses issues on how to manage established companies in bioscience sectors, as well as the transitions from start-up to established company. The students will acquire knowledge on company formation, team building, intellectual property, financing, partnering and regulatory issues in bioscience industries.

FINA 202**Business Finance****Three Credits**

The course centers on the study of fundamental principles of business finance and their analysis, planning and control functions. It includes discussion of effects of income tax, basic financial ratio earnings, capital budgeting and cost of capital, interest factor in financial decisions, working capital and assets management.

FINA 204**Money and Banking****Three Credits**

The course covers the nature and role of financing, varieties of money, theory of the origin of monetary value, monetary systems, commercial banking, Federal Reserve System, economic policies control, and international commerce.

FINA 240**Risk and Insurance****Three credits**

Students will study the different types of risk, the methods for dealing with them and, the insurance institution as an instrument for dealing with risk. The course will examine in detail what makes a risk insurable, the different types of insurers and their marketing systems, what factors should be considered in selecting an insurable, the functions and organization of the insurer, the legal principles applicable to the insurance contract, and the main types of insurance contracts.

FINA 410**Corporate Finance****Three Credits**

The course covers concepts and problems of corporate finance for decision making under conditions of certainty and uncertainty. It examines working capital management and asset pricing, as well as portfolio theories. Topics include capital budgeting, corporate valuation and restructuring, capital structure relevance, and dividend policy.

FSBE 105**Freshman Seminar****Three Credits**

The course offers students a series activities, techniques and educative experiences to provide them with the means needed to identify and develop personal and learning skills. Students will learn to know themselves and develop self-esteem to accomplish personal and academic success. They will use the computer as a method for the teaching-learning process.

HURM 400**Safety and Occupational Health****Three Credits**

In this course the students will learn basic concepts of security and occupational regulations and policies. Emphasis will be placed on the analysis and prevention of accidents, and records of industrial accidents. The course also focuses on theories of industrial accident incidence, workers' compensation, functions of the safety and industrial hygiene staff, standards achievement, risk avoidance concepts, industrial accident investigation, information systems, protection systems (security), self protection and first aid, as well as ergonomics, among others.

HURM 412**Training and Development****Three Credits**

The course covers the importance of training and development to achieve organizational goals. It includes training program design, training needs assessment and development, and identification of the appropriate training. It also integrates learning theories in the design of training

programs. The course emphasizes the importance of learning effects on performance. Different training methods, the utilization of technology in training and comparison of methods with their costs, benefits, and characteristics of the learning process are discussed. It includes employee development and performance appraisal. Special topics such as a transcultural training, career management and organizational challenges, such as I skills obsolescence, employee advising and socialization, the balance between work and family, reductions and displacement, as well as retirement issues are also discussed.

INBU 350 @**International Business****Three Credits**

This course centers on presenting the concepts and administrative implications of international business practices in the area of products and services merchandising all around the world. The course will emphasize the pros and cons of economic theories, government policies, business strategies and the organizational structure of international business.

INOP 240**Supply Chain Management****Three Credits**

This course covers the major issues in supply chain management, including: definition of a supply chain, role of the purchase process, the relationship between suppliers and customer, ethical issues, resource planning, inventory management, process improvement, location decisions, supply chain integration, and performance and metrics along the supply chain.

INOP 320**Advance Operations and Production Management****Three Credits**

This course examines the concepts, principles and techniques of operations management and production, which is the main functional area of business. Most of the principles, concepts and techniques discussed apply to a variety of products, including manufactured and non-manufactured items and a wide variety of services. The course will analyze the transaction process needed, in order to run an efficient and up-to-date business. Other topics included are: operations programming, quality, inventory, reliability and others.

INOP 401**Statistical Quality Control****Three Credits**

The course provides students with comprehensive coverage of the fundamental concepts of quality control in the manufacturing and service industry. It is designed to introduce students to the principles of management techniques, providing a basis for the use of quality tools, rules and standards in this area of specialization.

INOP 405**Inventory Control****Three Credits**

As a vital function of an organization's operational structure, effective inventory management is key to improving a company's customer service, cash flow and profitability margin. This course will focus on inventory control tools and techniques, with in-depth coverage of the latest practices in the field. This will provide relevant information involved in day-to-day decisions.

INOP 409**Management and Physical Distribution****Three Credits**

This course provides general knowledge of theories and management aspects related to logistics management in manufacturing and services sectors. It is divided in three important phases: 1) Introduction to logistics, with a strong focus on production and distribution (essential methods used to obtain a high level of effectiveness and productivity); 2) Discussion of important and relevant aspects with respect to customer service and satisfaction (transportation, warehouse, inventories, purchase order management and procedures) and 3) Detailed studies of management procedures and practices, both domestic and international. Other important methodologies for continuous improvement will also be discussed, such as Six Sigma and Lean Manufacturing, which help to increase productivity and customer satisfaction levels.

MANA 131**Human Relations in Business****Three Credits**

Students will study personal and interpersonal relationships in the decision-making process. They will analyze the dynamics of leadership and group behavior through discussions of different cases. Labor-management relations in production, communication and sales will also be examined.

MANA 204 @**Business Law and Entrepreneurial****Three Credits**

The course centers on studying the legal aspects of common ethical behavior that affects business transactions, with

emphasis on Puerto Rican legislation. Special attention is given to contracts, sales, and marketable securities, transfer of property, deeds and mortgages.

MANA 210**Management Theory****Three Credits**

The course centers on traditional principles of business administration compared to new concepts. Students will analyze the management process through discussions of the four basic principles of business administration: planning, organization, administration, and control.

MANA 213**Human Resources Administration****Three Credits**

The course centers on the study of the theory and application of fundamental principles of human resources management in an enterprise. Topics include the dynamic role of the manager and his/her relationship to personnel. The course also looks at issues in human resources management and their relation to the general objectives of the enterprise.

MANA 230 @**Organizational Behavior****Three Credits**

In this course, students will learn the basic principles of management: planning, organizing, directing and controlling, incorporating the fundamental concepts of organizational behavior. Management processes will be analyzed by integrating the basic principles. Students will learn how individuals and groups impact behavior within an organization. Includes classical and contemporary theories of organization; interpersonal and organizational behavior, motivation, communication, leadership theories and processes of decision-making. It includes both the theory and practical application of organizational behavior in business. It is a field of systematic study that focuses on improving productivity, quality and helping professionals to develop methods to empower people and to design and implement programs of change, elements of globalization and diversity. Provides guidance to managers in the creation and development of an ethical and healthy working environment.

MANA 260**Managerial Strategies****Three Credits**

The course centers on the study of special topics and their application to the pharmaceutical industry. The concept of total quality, the importance of internal and external clients, the use of methods and tools to prevent and solve problems will be discussed. The course explains and demonstrates the benefits of implementing a continuous improvement strategy to achieve business and personal goals.

MANA 300
Ethics in Business
Three Credits

The course centers on ethical principles involved in the decision-making process in a business environment. The student will be learning concepts related to moral aspects of human behavior within the whole social system, and particularly in business settings or in groups where the individual operates.

MANA 302
Labor Legislation
Three Credits

The course centers on the study of the fundamental aspects of labor laws at state and federal levels. Students will analyze the rules governing employer's labor relations, protective labor legislation, personnel law, social security legislation of the labor law and health and safety at work.

MANA 304
Project Management
Three Credits

The course centers on everything that a person needs to know in order to work successfully in today's exciting project management environment. Students will learn how to organize as well as how to manage effective project teams, from planning and scheduling to cost management. So as to ensure that students are learning today's best practices, they will revise concepts now closely aligned with the PMBOK (Project Management Body of Knowledge) framework and approach. Coverage of the latest business developments and challenges will acquaint students with issues such as project constraints, stakeholder issues, the project charter, how projects relate to an organization's strategic plan, and much more. Students will learn the keys to effective communication both within and outside of a team. A wealth of new and revised intriguing cases will inspire discussion and debate, while new real world vignettes will give students first-hand insights into how to apply project management in the workplace.

MANA 306
Government and Business
Three Credits

The course covers the role of government in the free enterprise system and legislation created to control or regulate commerce.

MANA 308
Real Estate Management
Three Credits

The course covers fundamentals of real estate and the essentials of brokerage, financing, mortgages, investments, property administration, and appraisals.

MANA 316
Small Business Administration
Three Credits

The course centers on planning, distribution of space and handling of materials, analysis of investments, inventory control, quality control, and the analysis of methods to determine employee efficiency for small businesses.

MANA 321
Supervision and Leadership
Three Credits

This course provides a general view of the concepts, methods, and modern supervisory techniques needed to become an efficient business manager. It emphasizes the supervisor's responsibility and authority, and highlights the role and functions of the supervisor. Theory is combined with practical observations, so that the student can become aware of all the fiscal, human and psychological resources that the supervisor must use in order to administer efficiently and effectively.

MANA 340 @
Operations Management
Three Credits

The course centers on the study of, planning and control of production facilities and operations. Topics include the use of techniques and models for decisions related to: demand forecasts, product mix, plant location, quality control, inventory control, and the human factor in the production process.

MANA 395
Total Quality Management
Three Credits

The course centers on the analysis and discussion of the elements of total quality management and its effect on organizational behavior. The course also provides a review of the effects of total quality management of organizations in general, the responsibilities of the manager and the behavior of employees in the organization.

MANA 401
Enterprise Strategy
Three Credits

This course integrates the knowledge acquired in the first three years of business administration. It includes the strategic study organizations at all stages and their social and environmental impact.

MANA 404
Labor Relations
Three Credits

The course presents a multinational approach to labor relations, but places special attention on Puerto Rico. Students will analyze the origins of labor unions in Puerto Rico, as well as labor laws and federal laws related to the island. Arbitration and complaint procedures and the selective analysis of current situations in labor will also be studied.

MANA 408
International Trade
Three credits

The course centers on the commercialization process of products and services around the world. It includes fundamental themes of international commerce, such as: marketing of exports, organization of the exporting business, financial bases of the exporting process, market selection and research, strategies to promote products in international markets, legal aspects and support instruments in international commerce, international cargo transportation and insurance, regulative and preferential practices in international commerce, importing techniques and operations, dealing with export documents, and an introduction to the new process of globalization.

MANA 422
Compensation Management
Three Credits

The course presents principles and techniques used in the design and the administration of a compensation system. It will include aspects concerning legislation, base pay structure, job evaluation, performance analysis, as well as incentives plans, benefits and services.

MANA 450
Project
Three Credits

The course is the most important experience of design for the students, since it interates all the knowledge acquired in different courses. The strategic planning outline is used as an integrative vehicle. The human factor stands out as critical element for the success of the efforts to implant managerial politics. The student can design his/her own company or can serve as an advisor to a company. This experience can be carried out as a workshop, an investigation seminar, an individual or group project, or as a creative task carried out in a studio, a laboratory, a simulator or research field. To develop a company or the task assigned, students must dedicate a minimum of 45 hours during the academic term, supervised by a professor.

MARK 133 @
Principles of Marketing
Three Credits

The course centers on the processes involved in the distribution of goods and services from producer to consumer. Students will examine the comprehensive system of marketing, including management-controlled variables: product, price, promotion and distribution. They will also examine external variables such as government, the economy and society. Consumer behavior, modern marketing trends, market definition, placement and information systems, will also be studies, among other topics.

MARK 134

In order to create successful marketing strategies, marketers must take into account the relationship between marketing and external forces. Therefore, students also need to study how consumers think and behave in response to marketing, how other members of the distribution chain (such as retailers or manufacturers) and sellers interact, and how the environment and marketing are mutually affected.

MARK 135
Retail Sales
Three Credits

The course centers on an analysis of the theory and practical principles used in organizing and managing retail business. It includes topics such as: the planning and organization of retail business, merchandise purchasing and handling; sales and promotion, and control of business operations.

MARK 206
Consumer Behavior
Three Credits

This course examines important concepts, principles, and theories from the various social sciences in order to describe and explain consumer behavior. Students are encouraged to ask questions and to relate the course material to their own buying experiences and discuss these in class. This course explores how the examination and application of consumer behavior is central to the planning, development, and implementation of marketing strategies.

MARK 220
Social Marketing for Non Profit
Three Credits

While community based social marketing (CBSM) is predominantly used to describe the utilization of the marketing process in order to change behaviors related to sustainability and environmental responsibility, the course

takes a much more expansive view of CBSM, one that considers marketing as a tool that can be used by business and non-profits for developing communities, both economically and socially.

MARK 251

Advertising and Promotion Three Credits

The course covers basic principles of advertising. Ethics, as well as social and economic problems related to business advertising are considered. Also included are basic principles applicable to promotional copy writing and the selection of the methods used in transmitting information.

MARK 301

Marketing Management Three Credits

The course centers on marketing as a process and analyzes the application of its theories to management. Topics include the role of marketing in organization, development, implementation and control of the marketing plan.

MARK 305

Personal Selling Three Credits

The course covers strategies and tactics applicable to personal selling. Topics emphasized include basic principles of sales, selecting and qualifying prospects, research, selling techniques, and closing, which will help students achieve success in personal selling of products and services.

MARK 306

Sales Three Credits

The course centers on the study of the foundations of professional selling, such as creating, communicating and delivering value. Initiating, developing and enhancing customer relationships will also be discussed.

MARK 318

Sales Management Three Credits

The course centers on a description of the shift in industry from a production-oriented approach to a consumer-oriented approach. Topics include the role of sales management in a production-oriented firm and a customer-oriented firm; changes in the nature of sales management, and managerial challenges in sales management.

MARK 320

Marketing Research Three Credits

This course examines the fundamentals of marketing research and the integration of statistical programs for gathering and analyzing information in order to support decision making. Students will gain theoretical knowledge and practical skills in research that will add value to the academy

and will contribute to existing business solutions. The Students will be ethical in their research. The knowledge gained in this discipline will be useful for finding solutions to problems, and knowing the consumer behavior about preferences for a brand, product, service or business. Students will also learn about developing more effective promotions for a company in a digital world, creating a new products or modifying an existing product, identifying services that may have greater future demand and studying social networks to analyze the digital market.

MARK 321

Customer Service Management Three Credits

Throughout the course the student will gain a comprehensive understanding of the core competencies required for developing and implementing effective customer service. Customer service is increasingly becoming a vital business issue as organizations realize the benefits of an integrated, strategic customer service management system for providing effective customer support management systems. The course also aims to teach students the importance of planning a CRM strategy, it is essential to focus on the customer's values and to collect information about their requirements and, based on this, to further analyze the relationship between the degree of importance and the degree of satisfaction for each requirement.

MARK 322

Information System for Marketing / E-Marketing Three Credits

Throughout the course the students will apply the advanced features of Microsoft Office programs. Students will prepare different documents such as professional letters, tables, columns, forms and documents that can be used in proposals and presentations to potential customers. They will also learn about the functions of merge and track changes. They will edit documents via the internet and create different versions of a document. In addition, the course will emphasize the characteristics of an effective presentation using other applications such as Prezi, Illustrator, Publisher and, Flash, among others. The course will offer training in advanced skills for the design, creation, editing and printing of worksheets, professional databases and promotional tools. Students will analyze the information for determining the best way to present tables, reports, graphics, databases, pages for publication on the Internet and apply these skills to different cases. The course will integrate other Office applications (Publisher, Adobe, Flash, among many others) and to the Internet and other technologies (Skype). Students will learn how to use different applications of the synchronization process of the Ipad and, tablets with cellular phones for monitoring meetings, sales, following up on customers, orders, among many other functions. Students will obtain the knowledge and basic skills related to the use of technological tools, so that they will be able to perform

analysis of sales, plan effective presentations to customers and use, visual communication techniques effectively. The course also examines how the evolution of the marketing and the incorporation of the internet and other technologies have driven change by creating new business strategies and connections with the consumer. The course delves into how the application of the emarketing complies with its function to create, communicate and deliver value to customers. The course will also discuss how proper management emarketing succeeds in establishing relationships with the customers that produce end up with as a result profits for the organization.

MARK 330

Retail

Three Credits

This course familiarizes students with the decisions involved in running a retail firm, as well as the concepts and principles for making those decisions. The student will gain an understanding of retailing trends, technology in the industry, merchandise planning and management, pricing, location, promotional strategies, human resource management, store design and layout, customer service, and the international movement of retailers. The course will give students insight into the retailing environment and will allow them to make decisions for effective management. The course also provides a good foundation for those interested in owning or running a small retail business or those interested in pursuing a retail career as a merchandise buyer or store manager.

MARK 350

International Distribution Channels

Three Credits

This course provides students with the skills to design distribution channels both domestically and internationally. The distribution channels of companies often represent the main points of contact with end consumers. Having the right partners and their cooperation is critical to the success of the company in acquiring to retaining consumers. Specifically, this course discusses the nature of distribution channels, the importance of using marketing intermediaries, the number of levels, behavior and organization, systems of vertical integration, horizontal integration systems, hybrid systems, marketing, physical distribution and management logistics.

MARK 355

Sales

Three Credits

The course centers on the foundations of professional selling, such as creating, communicating and delivering value. It also includes discussion of initiating, developing and enhancing customer relationships.

MARK 400

Service Marketing

Three Credits

The course provides a perspective of the Service Marketing focused on service as a product and service to support the product and the application of its principles to the marketing mix. The student will gain the knowledge and practical skills for creating effective strategies in marketing services to meet changing needs, expectations and understanding consumer behavior. Topics include consumer behavior and positioning in the context of the service, the essential elements in the creation of service, the physical and electronic distribution, as well as pricing and promotion as a tool to educate the consumer. Service marketing and consumer behavior will be studied, as well as the positioning in the context of the service, the essential elements in the creation of the service, the service through physical and electronic distribution channels, and price and promotion in service.

MARK 402

Marketing Integrated Communication

Three Credits

In this course is studied the role of communication in the marketing objectives of an organization is studied. Topic include the nature of communication; marketing resources, effect of society, attitudes and individual preferences in communication; media and the relevance of public relations.

MARK 403

Product Management

Three Credits

The course focuses on the development of new products and on strategies for existing products. The scope and importance of new products will be considered, as well as their objectives and development processes. Emphasis will also be given to the process of change or modification of existing products.

MARK 404

International Negotiation

Three Credits

This multidisciplinary course explores the negotiation from an individual to an international perspective, including both the public and the private sector. Special emphasis is placed on cross-cultural elements which affect both the perception and the levels of the negotiation process. The course explores the context of negotiation, bargaining structure and dynamics (strategies and tactics) to persuade, as well as negotiating to reach an agreement.

The experience will also aid students in deciding on a specific area in the marketing field. Requires one hundred and sixty (160) full-time work hours during the semester.

MARK 455
Marketing Project
Three Credits

In this course the student will apply knowledge acquired in the marketing concentration. The student will be able to apply different aspects, such as the role of marketing in the organization, development, implementation and control of the marketing plan.

OFAD III
Elementary Spanish Shorthand
Three Credits

The course covers the basics of elementary Spanish shorthand. Students will develop shorthand technique through reading and writing of shorthand symbols, including: vocabulary, brief forms, phrasing, as well as frequent word beginnings and word endings. Exercises are provided to emphasize correct language usage. One semester, 4 hours a week.

OFAD 112
Intermediate Spanish Shorthand
Three Credits

This course continues developing shorthand skills, but at a quicker pace, using reading and writing. Knowledge of shorthand is increased with new vocabulary, brief forms, phrasing, letters, as well as frequent word beginnings and word endings. Language usage is emphasized. One semester, four hours a week.

OFAD 113
English Shorthand
Four Credits

This course emphasizes the principles of English shorthand. It introduces pre-transcription skills. Special attention is given to accuracy, spelling and the application of grammatical concepts. Dictation techniques will be developed up to a minimum of 60 words per minute. One semester, five hours a week.

OFAD 121
Keyboarding
Three Credits

The course centers on developing keyboard skills and touch-typing, enabling the student to enter data quickly and precisely in any electronic system. Students are introduced to the ten-key pad. One semester, three hours a week.

OFAD 125
Accounting for Secretaries
Three Credits

This course provides the basics of accounting needed for secretarial work. It includes the following topics: nature and purpose of accounting, basic procedures, internal control, planning, the use and purpose of payroll, and accounting in

a service and merchandising enterprise. One semester, three hours a week.

OFAD 141
Keyboarding and Document Formatting I
Three Credits

This course emphasizes basic techniques, proper use of the keyboard, proofreading, application of basic skills to horizontal and vertical centering, proofreader marks, and business correspondence. Students will develop speed and accuracy skills. One semester, four hours weekly.

OFAD 142
Document Formatting II
Three Credits

The course centers on further development of touch-typing skills. Students carry out exercises to develop speed and precision, outlines, manuscripts with footnotes, tabulation, machine direct composition, memoranda, drafts, envelopes and commercial letters with special notes. Basic techniques and attitudes are emphasized. One semester, 4 hours a week.

OFAD 205
Office Technology
Three Credits

This course provides basic concepts and the history of word-processing. It includes an analysis of changes in the organizational structure of the office up to the modern electronic office. The course also provides information on the various professions stemming from word-processing and how this skill relates to other data systems. One semester, four hours a week.

OFAD 206
Word Information Processing I
Three Credits

This course provides students with instruction and practice in the use of a word processing program. The student will prepare documents applying the basic and intermediate functions of this program. One semester, four hours a week.

OFAD 207
Word Information Processing II
Three Credits

This course offers the student experience in the use of microcomputers through the preparation of documents, as well as through the use of advanced functions of a word-processing program. Emphasis will be placed on adapting software for particular jobs. In addition, this course will allow students to maximize their effectiveness with word processing in the business office. One semester, four hours a week.

OFAD 251
English Transcription
Three Credits

This course continues the review of Gregg shorthand principles. Emphasis is placed on transcription skills and the proper use of grammar to produce correspondence in English. One semester, four hours weekly.

OFAD 261
Spanish Transcription
Three Credits

This course integrates typing, shorthand and language skills for a gradual development of transcription ability. One semester, three hours a week.

OFAD 280
Records Management
Three Credits

This course provides students with the necessary knowledge to organize and maintain document management and filing systems. This knowledge will enable students to work effectively in offices that have centralized or decentralized systems for document management. One semester, three hours a week.

OFAD 281
Office Systems and Procedures
Three Credits

This course provides students the opportunity to enhance knowledge acquired from previous courses. It also develops in students a sense of the responsibilities of working as an office administrator and the ability to solve problems in an office or business environment.

OFAD 282
Office Management
Three Credits

This course provides students of office management with situations to which office personnel are exposed to and teaches them how to face them. It develops in students the competencies required to manage diverse office situations. It presents basic management processes and principles. Topics related to the selection, motivation, and evaluation of office personnel, as well as duties and responsibilities are also discussed. Topics related to office automation, its impact on the personnel and the budget are reviewed.

OFAD 286
Machine Transcription
Three Credits

The students will learn how to work with dictation and transcription systems. Students will also strengthen English language skills through practice in listening, punctuation, grammar, vocabulary and proofreading. One semester, four hours a week.

OFAD 307
Computer Software Applications
Three Credits

This course covers different technological phases in the application of microcomputers. It is designed to enable students to apply computerized programs, such as: spreadsheets, record management, databases, telecommunications, and desktop publishing.

OFAD 381
Business Internship (Associate Degree)
Four Credits

The business internship offers students the opportunity to demonstrate the skills acquired throughout their courses in the office administration majors. This course requires a minimum of sixteen (16) hours a week of practice in a private or government office, and one hour a week of seminar. The site supervisor and the internship coordinator will be in charge of the performance evaluation. One semester.

OFAD 382
Business Internship (Bachelor's Degree)
Four Credits

This course requires a minimum of sixteen (16) hours a week of practice in a private or government office, and one hour a week of seminar. Integration of classroom training with on-the-job experience will allow the students an opportunity to participate in daily business applications related to their professional careers. The site supervisor and the internship coordinator will be in charge of the performance evaluation. One semester.

OTEM 101
Introduction to Office System Technology
Three Credits

The course introduces the student to basic computer concepts, the Internet as a technological resource, electronic mail and the importance of the different applications. It will familiarize the student with the basic concepts of information retrieval, as well as basic concepts in electronic prosecution of data. Emphasis will be placed on handling of computers.

OTEM 201
Information Technology
Three Credits

This course will develop different input technologies: digital image, scanning, speech recognition, electronic communication, and information processing.

OTEM 202
END-USER SOLUTIONS

Three Credits

This course introduces three of the most important office applications: Word Processing, Excel, and PowerPoint. By the end of the course the students will know how to use the office applications to create documents, such as reports, spreadsheets, and PowerPoint presentations. The exercises focus on the most common skills that every computer user needs for proficiency.

OTEM 303
Database Management

Three Credits

The course provides the concepts, advanced techniques, and skills necessary in the process of relational databases, analysis and design. It is intended to offer the necessary tools for maintaining and managing information. The student will learn how to analyze information and present it in table reports, forms, and queries. The basics of SQL programming are introduced.

OTEM 310
Office Information Management

Three Credits

This course develops the competencies needed to administer any type of office. Processes and basic administrative principles and topics are presented, such as: administration of documents using the rules promulgated by ARMA (Association of Records Managers and Administrators, Inc.), ethical aspects and social responsibility, efficient work and time management, the importance of ergonomics in the office environment, and relevant information for the selection of office personnel. Also included are motivation techniques and employee selection.

OTEM 401
Document Publishing

Three Credits

This is an introductory course that will acquaint students with graphic design technique, principles of page layout and design, and desktop publishing terminology and applications. Students will create a variety of documents such as flyers, brochures, newsletters, and business cards. This course will assist students in producing documents that communicate effectively through good design and application of basic concepts of desktop publishing.

OTEM 402
Web-Based Document Publishing

Three Credits

The course is designed to enhance skills and knowledge of the professional web author by using cross-platform HTML editor for creating and managing Web sites and pages. The student will use a variety of techniques and tool activities

designed to develop pages for the commercial/professional web developer standard. The student will design, develop and manage navigation of the Web sites and Web pages.

OTEM 404
Training and Development in Office Technology Management

Three Credits

Learning theories and instructional development in education are applied to the training of employees in the use of office systems. The following material will be covered: employee and business needs, selection of instructional strategies, and conducting training, as well as conducting follow-up re-training.

OTEM 405
Integrated Applications

Three Credits

In this course students will integrate Microsoft Office Applications. The software to be covered is Word, Excel, PowerPoint, Access and Outlook. During the course students will apply knowledge and skills acquired in word processing, spreadsheet, electronic presentations and databases. Students will apply Internet options, including e-mail. Students will also apply critical thinking to solving problems.

OTEM 410
End-User Project

Three Credits

In this course simulations will allow students to apply skills acquired in previous courses and see them come together in developing site projects. The methodology facilitates collaborative learning. Emphasis is placed on projects, simulations and case studies that challenge and sharpen learners' problem-solving skills, providing an opportunity for students to gain practical experience in web design environments.

OTEM 415
Portal Workflow Management

Three Credits

This Web Content Management course provides some principles and practices for designing, developing, and maintaining web-based projects of all sizes and for all audiences. The content management strategy is unique, because it combines three critical components: processes, technology, and people.

OTEM 416
Electronic Document Management

Three Credits

The course clearly defines and simplifies the principles of document engineering and management. It presents the proven techniques and methods for planning, building, and maintaining automated systems (EDMS) for fast and efficient storage and retrieval of documents and forms.

OTEM 420**Electronic Content Management End-User Project****Three Credits**

Students will apply concepts, principles and system design practices, as well as programming techniques for the development of applications in the engineering and administration of documents. The course includes file design and programming for the implementation of the (EDMS) and (CMS) system. Requires laboratory .

OTEM 425**Microsoft Word/Microsoft PowerPoint****Three Credits**

In this course students will apply the advanced functions of Word and PowerPoint. Students will prepare different types of letters, tables, columns and forms. They will apply the following functions: merge, track changes, Internet document editing, and different versions of a document. In PowerPoint, students will develop well-formatted electronic presentations. At the end of the course, students will be prepared to take Microsoft Word and PowerPoint Certification exams.

OTEM 426**Microsoft Excel & Microsoft Access****Three Credits**

The course provides advanced techniques needed to design, create, edit, print and publish professional-quality electronic spreadsheets and databases on the Internet/Intranet. Students will learn how to analyze information and present it in table format and in charts. Topics include database management, web pages, and macro programming capabilities. Macros will be created using Visual Basic. The course prepares students to take the Microsoft Office User Specialist or Microsoft Access Expert exams.

OTEM 427**End-User Project (MOUS)****Three Credits**

This course prepares students for the Microsoft Office User Specialist (MOUS) exam. Simulations are offered in each of the Microsoft applications to test the knowledge acquired, thus reinforcing skills. Multiple methods for each of the tasks on the examination are provided.

QUME 1016**Introduction to Quantitative Methods****Three Credits**

This is a basic mathematics course for business administration students. The course includes: fundamental operations with natural and cardinal numbers, fractions, and decimals; ratios and proportions; percentages, algebraic expressions, and linear equations, as well as applications for simple and compound interest.

QUME 202**Quantitative Methods ADMI****Three Credits**

The course is an introduction to quantitative methods for business administration students. It includes: fundamental operations with real numbers, linear equations, solutions to systems of equations, and linear inequalities. Students are introduced to concepts of quantitative analysis, mathematical models and tools, linear programming, and applications to aid in problem solving and practical decision-making.

STAT 201**Business Statistics I****Three Credits**

This is an introductory statistics course dealing with frequency distribution, presentation of statistical data, measure of central tendency, and dispersion. The concept of probability, as well as probability distributions used commonly in business analysis will be emphasized.

STAT 202**Business Statistics II****Three Credits**

Students will study sampling distributions, estimating with internal validity, hypothesis testing, analysis of variance, simple regression and correlation, decision analysis, and techniques of quality control. Chi-square and other nonparametric tests are also studied.

VISION

In collaboration with the broader Universidad Ana G. Méndez-Recinto de Gurabo community and the professional community in school districts, the School of Education seeks to prepare professionals who are able to meet the challenges of education in a global society that is changing, diverse, and technologically oriented.

The School of Education will provide a high quality, student-centered and innovative environment to prepare reflective, collaborative and highly effective educational leaders who can address the needs of students and communities in Puerto Rico and abroad.

The Undergraduate Education Program, conscious of its responsibility for improving the quality of education, provides teacher candidates with a solid preparation in the field of education, as well as with the academic background needed to enhance their general professional competence and their teaching skills.

MISSION

The School of Education is committed to developing reflective, collaborative and highly effective educational leaders. We view teaching both as an art and as a science, learning as a reciprocal process, and service as a responsibility. Thus, we provide a learning environment that promotes individual creativity and fosters the synthesis of theory and practice. We facilitate the development of leaders who are sensitive to individual differences, to moral and equity issues and who, in their work as educators, will actively shape educational organizations.

The School of Education offers Bachelor's Degree programs in Elementary Education, Secondary Education, Special Education and Physical Education. The School of Education serves a diverse student body at the undergraduate and graduate levels on campus, off campus, and at several sites in the United States. We regard the diversity of our many units as a strong point, which adds value to our identity.

The School of Education has a tradition of providing an educational environment that is conducive to interaction, innovation, reflection and service. The essence of our School is its people. From faculty and staff, students and alumni to community partners in private and public schools, the intense commitment and great sense of pride and responsibility in our role as educators is indicative of the core values sustained by the School of Education.

In carrying out our mission, we value:

- Excellence and innovation in teaching and learning
- Integration of pedagogical theory and practice
- Professional and personal integrity and responsibility
- Creativity and the development of significant projects that serve as examples in our field
- Active construction and application of knowledge
- A culture that stresses intellectual stimulation, academic excellence and personal dignity
- Teamwork and collaboration with schools, districts, institutions of higher education and organizations in Puerto Rico and abroad
- A sense of community that is fostered by pride in the accomplishments of each of its members and programs

SPECIALIZED ACCREDITATIONS

Teacher preparation programs are accredited by the Council for the Accreditation of Educator Preparation (CAEP).

The objectives of the Division of Undergraduate Education are to enable students to:

1. Understand the importance of the social and personal mission of the teaching profession.
2. Accept changes that will lead to a broadening of their knowledge and experience as teachers and the capacity to use that knowledge effectively in the teaching-learning process.
3. Analyze social, psychological and philosophical foundations of education.
4. Choose and effectively use resources and materials to improve their teaching methods.
5. Understand and use different educational strategies and techniques effectively.
6. Be exposed to a variety of experiences that will help them to develop the skills, attitudes and abilities needed to become agents of change in the field of education.
7. Develop awareness of the responsibility of keeping abreast in their fields of specialization.
8. Understand, revise and enrich the curriculum in their area of specialization.
9. Be able to incorporate technological innovations into their personal lives and their teaching.
10. Develop the skills that will make them lifelong learners.

11. Understand and use the Standards for Excellence in Teaching and the constructivist approach.

PROGRAM OF PHYSICAL EDUCATION, SPORTS STUDIES AND MOVEMENT

The Program of Physical Education, Sports Studies and Movement is committed to the development of competent physical education teachers, as well as athletics programs, health-related programs, and student services.

Strong efforts are centered on providing the teacher candidate with the scientific foundations, sports skills and historical perspective of this field, within the general objectives of education.

The intercollegiate, intramural and community services programs are an integral part of the Program, promoting effective management of physical facilities, as well as of economic and human resources. This integration provides an excellent experience in the development of a complete professional in this field.

The objectives of the Physical Education Program are to enable the student to:

1. Develop professional knowledge of the current tendencies and developments in physical education.
2. Analyze the legal framework that regulates the physical education field.
3. Develop techniques, strategies, and procedures in evaluation applied to physical education.
4. Develop policies and educational programs in adapted physical education.
5. Develop techniques, procedures, and administrative practice in the administration of physical education, recreation and interschool competition.
6. Help to improve the quality of life for society.
7. Promote students' use of computers and audio-visual equipment in the process of teaching physical education and in the management of sports events.
8. Develop the theory, conceptual knowledge, technical skills, and attitudes needed to become an effective physical education teacher.
9. Develop knowledge of the scientific foundations of physical education and sports.

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN PERSONAL TRAINING

The Associate Degree in Personal Training is a program that provides professional formation to future trainers, sports leaders working in sports leagues or community organizations, or parents of athletes. The program facilitates the development of candidates competencies towards an effective role, ethical behavior and an understanding of the need for equity and inclusion in the field of physical training. The learning experience is supported by the acquisition of a theoretical (science) and practical (physical activity) framework of the required content, so that the candidate will become competent as a trainer, based on an ethical and behavioral code. The code is based on the social responsibility of protecting the safety and well-being of persons participating in different personal and training programs, as well as the defense of each participant's rights. The program is guided by the regulations for trainer studies of the National Strength and Conditioning Association (NSCA) and the American Council on Exercise (ACE).

ASSOCIATE DEGREE IN SIGN LANGUAGE INTERPRETATION

The Associate Degree in Sign Language Interpreting will be the first academic program at this level in Puerto Rico. The Program will provide theoretical, academic and technical training to those students desiring to pursue a degree in interpreting for the deaf. It includes classroom lectures, laboratory practice skills and field experience in the deaf and hearing community. The structure of the program provides for the students to have opportunities for incidental learning. The program is focused on the student who does not have an academic degree and is interested in developing sign language and interpreting skills to work in immediate settings such as education, vocational and community settings. The program includes courses in liberal arts, which are important for the students to be able to interpret in any setting.

ASSOCIATE DEGREE IN INFANTS AND TODDLERS

The Infants and Toddlers Associate Degree is a program designed for the preparation of professionals that will work in child care centers for infants and toddlers, and Early Head Start centers. The program offers professional formation so that graduates can provide services in compliance with the appropriate practices and quality standards regarding early child development. The process will be centered on the acquisition of knowledge, skills and attitudes toward the relationships among the social, physical, emotional, linguistic, creative and cognitive developmental dimensions of typical and atypical children. The program will provide future professionals with the tools that they will use in the field to help children develop the required skills to be successful in their real-world settings and eventually in school.

COURSE DESCRIPTIONS

COMS 104

Community Service

Three Credit Hours

This course is designed with two specific goals: to provide the student practical experiences in scenarios similar to the ones s/he will encounter after graduation; and to develop a sense of civic responsibility and involvement in the student. A minimum of 30 hours of volunteer service in a non-profit agency, organization or institution is required.

EDUC 106

Introduction to Education

Three Credits

This is the first professional course in the curriculum of the teacher preparation program. It introduces concepts related to education while students explore their individual commitment to teaching as a career, and their strengths and weaknesses. Special emphasis will be placed on observation and analysis of school scenarios, especially the teaching-learning process. The different roles a teacher must take, as part of his/her school functions will be discussed. The student will complete 15 hours of clinical experiences.

EDUC 123

Creative Expression in Young Children

Three Credits

Students will study the methods, materials and techniques used in developing basic skills in music, art, and drama in young children. Students will practice processes used to initiate singing, basic rhythms, use of simple instruments, arts and crafts materials, use of puppets, improvisation and dramatization according to child's age development and maturity from pre-school to sixth grade. The course includes discussions of ways to motivate free expression and creativity in infants and young children, as well as the development of awareness and appreciation of the fine arts in young children.

EDUC 171

Human Growth and Development

Three Credits

The course centers on the study of psychological thought related to growth and development from birth through adolescence, and its implications for the teacher and the school. Changes that occur in human beings from the moment of conception and throughout the different stages of life, such as prenatal, infancy, childhood, adolescence and adulthood, are studied from the physical, psychomotor, social, psychological, and moral viewpoints. Ten hours of classroom observations are part of the requirements.

EDUC 172

Educational Psychology

Three Credits

This course offers a wide overview of concepts related to learning and intelligence and their relationship with human development. Topics discussed are psychometric techniques, styles and theories of learning, emotional development, moral development and ethical conduct, as well as the development of personality, mental and physical health. The course examines the relationship of these theories to educational practice and the role of the teacher.

EDUC 201

Introduction to Educational Technology and Basic Principles of Instructional Design

Three Credits

This course intends to analyze the historical development and integration of the audiovisual field into the educational process. It focuses in the systematic analysis of instruction, identification of needs, objective definition, choosing media, activities, instructional strategies and process evaluation. The integration of technology into the teaching-learning process is examined.

EDUC 202

Teaching Materials and Learning Devices

Three Credits

This laboratory course combines graphic and instructional media processes for education and training purposes. Techniques for integrating media into instruction are practiced. Students will develop instructional materials, taking into consideration the principles of good communication, appropriate and effective design, and the use and evaluation of these materials.

EDUC 205

Sociological Foundations of Education

Three Credits

The course is a study of culture and its relationship to the educational process. It covers phenomena of change and their educational implications. School is analyzed as a social and political system. The role of economics, history and the social sciences in education and educational thought is examined. Different socio-cultural principles are analyzed as they relate to the development of the educational system of Puerto Rico.

EDUC 206

Teaching Reading in Grades K-3

Three Credits

A study of the theory and practice of essential aspects in the teaching of reading in grades kindergarten to third. Emphasis on different methods employed to teach reading. Includes development of teaching techniques, strategies, diagnosis and correction of reading difficulties.

EDUC 207**Teaching Writing in Grades K-3****Three Credits**

Study and analysis of the theory and practice used in the teaching of writing in grades kindergarten to third. Development of teaching techniques and strategies used to teach writing to young children are emphasized. Includes the diagnosis and correction of writing difficulties.

EDUC 208**Critical Thinking Skills and the Teaching of Social Studies in Primary School K-3****Three Credits**

This course is designed to prepare the future teacher in the content and skills of the social studies program for grades Kinder through Third of the primary school. It examines in depth themes related to the development of mental processes, intellectual skills, processes used for conflict resolution, and the development of ideal attitudes and values expected of a future teacher. Standards of the Social Studies Program of the Department of Education of PR are used as base reference.

EDUC 209**Elementary School Mathematics Curriculum****Three Credits**

Examination and comparison of the mathematics curricula and teacher standards of the Department of Education of Puerto Rico and the National Council of Teachers Mathematics Standards for teaching this subject in the elementary school. This course prepares future elementary school teachers by exposing them to techniques, processes, strategies and means to teach mathematics. Development of mathematical skills and the inductive method will be emphasized as will be the use of the computer as a learning tool for this subject.

EDUC 210**The Elementary School Science Curriculum****Three Credits**

Examination and comparison of the elementary school science curricula and teacher standards of the Department of Education of Puerto Rico and the standards for the teaching of science of the United States. This course prepares future teachers through the study and analysis of the foundations, theories, principles, skills, concepts, planning, research, and implementation of the elementary school science curriculum. Emphasis is placed on the new concepts for teaching science: to learn by discovery, hands-on science activities, the communication of ideas and research findings, and on teaching strategies which help children learn the processes and concepts of science. The use and integration of technology is emphasized.

EDUC 211**Curriculum and Teaching of Mathematics in Fourth to Sixth Grades****Three Credits**

This course prepares future teachers by exposing them to techniques, processes, strategies and means to teach mathematics in grades four through six. The development of mathematical skills will be emphasized, as well as practice of the inductive method. The Standards for the Mathematics Program published by the local Department of Education will be examined. The use of the computer as a learning tool is explored and emphasized.

EDUC 212**Curriculum and Teaching of Science in Fourth to Sixth Grades****Three Credits**

This course studies and analyzes the foundations, theories, principles, skills, concepts, planning, research, implementation and curriculum for the teaching of science in the fourth to the sixth grades. Considerable emphasis is placed on hands-on science activities and on those teaching strategies which help children learn processes and concepts of science. The Standards of the Science Program published by the local Department of Education are examined. The use and integration of technology is emphasized.

EDUC 213**Math and Science: Age of Discovery: Pre Kindergarten to Third Grade****Three Credits**

Students will study and analyze the science and mathematics curriculum and its application from preschool and kindergarten to the third grade. Curriculum design for science and mathematics and its relationship to the growth and development of children from ages three to eight will be examined. The use of the computer as a learning tool is explored and emphasized, as well as the examination of the Standards for the Science and Mathematics Programs produced by the local Department of Education. Clinical experience of at least ten hours throughout the semester will be required.

EDUC 214**Computers in Education****Three Credits**

This course introduces general concepts about the structure of computers, their impact on modern society and their integration into the educational process. The course provides laboratory experiences in which the student will practice acquired knowledge in diverse situations related to teaching. Students will learn the use of computers as teaching and learning tools and will integrate the use of other emerging technology into their learning experience.

EDUC 215**Critical Thinking Skills and the Teaching of Social Studies in Elementary School****Three Credits**

This course is designed to prepare the future teacher in the content and skills of the social studies program for grades Pre-K through Sixth of the elementary school. It examines in-depth themes related to the development of mental processes, intellectual skills, processes used for conflict resolution, and the development of ideal attitudes and values expected of a future teacher. Standards of the Social Studies Program of the local Department of Education are used as a point of reference.

EDUC 216**Teaching of Reading in Fourth to Sixth Grade: Diagnosis and Correction of Reading Difficulties****Three Credits**

The course centers on the theoretical and practical study of essential aspects needed to teach reading in elementary grades four through six. Conceptual models and official documents of the local Department of Education are studied and analyzed. Students will also examine and discuss selected literature appropriate for the grades included in this course.

EDUC 217**Teaching of Writing in Fourth To Sixth Grade: Diagnosis and Correction of Writing Difficulties****Three Credits**

This course will prepare future teachers in grades four to six in basic techniques needed to develop writing skills, calligraphy, spelling and creativity. Standards of Excellence of the Spanish Program of the Department of Education will be examined. Available commercial materials for the teaching of writing will be examined. Future teachers will practice the production of materials to provide for the needs of each child. This course will combine theory and practice and will develop in the future teacher the skills needed to teach writing as a process of communication.

EDUC 219**Perceptual Motor Development in Preschool and Primary Education****Three Credits**

Students will study the physical, social, emotional and cognitive development of children and its impact on perceptual motor development. Different development theories are analyzed and their practical use is discussed. The course includes the study and analysis of childhood development theories of contemporary teaching and learning. Instructional strategies will include observation, analysis, research, simulations, small group discussion, and teamwork.

EDUC 222**Teaching of English as a Second Language****Three Credits**

The course centers on the study of the principles, methods and techniques used in the teaching of English as a second language in elementary school. Emphasis is placed on the curriculum, textbooks, lesson planning and observation, and the Standards for the Teaching of English as proposed by the Department of Public Education. Participatory experiences equivalent to ten hours of clinical experiences will be required.

EDUC 225**Methods for Teaching from Preschool to Third Grade****Three Credits**

The course is a study of all aspects related to the integrated development of preschool and primary education. The physical, emotional and cognitive development of the young child will be discussed. The history of preschool and primary education will be examined, as well as innovative methods, the curriculum, and the physical environment necessary to facilitate a good preschool program. Also studied are new approaches, as well as educational resources needed to develop an effective and successful preschool and primary grades program.

EDUC 276**Classroom Management****Three Credits**

This course will discuss, analyze and observe the daily occurrences of an elementary or secondary school classroom with the intention of studying techniques and strategies of classroom management, group control and behavior modification. The subject of violence in the schools and how to deal with it or prevent it will be widely discussed. This course is strongly recommended as an elective for all secondary school majors. Classroom observations and participatory experiences equivalent to ten hours of clinical experiences will be required.

EDUC 308**Participation of the Family and the Community in the Development of Children in Preschool and Primary Grades****Three Credits**

The course covers the foundations and components of human diversity in the educational context. Emphasis is placed on the development and application of processes and collaboration skills needed to work together with students, families and diverse groups to promote the development of learning communities.

EDUC 319**Theory, Practice and Assessment of Play Activities in Early and Primary Education Programs****Three Credits**

The course centers on the study, practice and assessment of theories related to play activities and the use of games in education, from preschool and kindergarten, up to third grade. Themes to be discussed include the role of play and game activities in child development, play as representation of reality, the purpose of play, types of games suitable for four to eight-year-olds, the purpose of evaluation in game activities, the need to follow rules while playing, and the use of play and game activities in assessment strategies.

EDUC 322**Language Development and Correction of Speech Difficulties in Preschool and Primary Grades****Three Credits**

The course covers language development of preschool and elementary school children. Different stages in linguistic development and theories related to early signs of language and speech difficulties in preschool and elementary school are studied and analyzed. Emphasis is placed on the identification and referral of children with language and speech difficulties, so that they may receive the special services they need to improve their oral communication.

EDUC 323**Literature for Children from Preschool to Sixth Grade****Three Credits**

In theoretical and practical form, this course offers the future teacher the most essential material related to children's literature within the elementary school program. Future teachers must be knowledgeable about a select and ample amount of children's literature, as well as about the methodology that will enable them to instill the enjoyment of good literature in children, and also inspire them to create their own. In this course books, works of art, fiction, folklore, poetry and games will be studied. Creativity will be stimulated

EDUC 324**Preschool Education: Past, Present and Future****Three Credits**

The course centers on the discussion of the historical and legal roots of preschool education. Innovative methods, techniques, strategies and best practices for the education of three-and four-year olds will be examined and discussed. Evaluation, selection and design of educational materials for this age group are also included.

EDUC 330**Teaching Spanish in Secondary School****Three Credits**

Students will study and analyze various aspects involved in the teaching of Spanish in secondary school. The course includes both theoretical content and practical experience related to the teaching of Spanish, the Standards of Excellence promoted by the Department of Education, and the strategies and methodologies employed for teaching language skills in oral and written form.

EDUC 331**Teaching of English in Secondary School****Three Credits**

This course is a requirement for all majors in the Teaching of English as a Second Language in secondary schools. It is based on the study and analysis of the objectives, materials, approaches and techniques suggested for teaching English. The Standards of Excellence determined by the Department of Public Education are examined and used as a point of reference.

EDUC 332**Teaching of Social Sciences and History in Secondary School****Three Credits**

This course provides future teachers an overview of the history and social studies curriculum, and examines skills needed to teach one of these two areas of the secondary school curriculum. Principles of integration, processes, methods, techniques and styles of learning are studied, along with the Standards of Excellence proposed by the Department of Education for these two areas.

EDUC 333**Teaching Mathematics in Secondary Schools****Three Credits**

The course is an analysis of different aspects related to the teaching of mathematics in secondary school. Methods, materials, curriculum, textbooks, teacher guides and the Standards of Excellence proposed for the teaching of mathematics are examined and analyzed.

EDUC 334**Teaching of Science in Secondary School****Three Credits**

The purpose of this course is to offer prospective secondary school science teachers the practical and theoretical experience needed to teach science. The course is divided into three parts: theory, the teaching of science in secondary school, and science curriculum. Specific knowledge that must be acquired by the students is emphasized in the last part of the course. Standards of Excellence for the Teaching of Science are discussed.

EDUC 336**Development of Language and Correction of Speech Difficulties in Primary****Three Credits**

Language development of preschool and primary (K-3) school children. Different stages in linguistic development and theories related to early signs of language and speech difficulties in preschool and elementary school are studied and analyzed. The emphasis of this course is the identification and referral of children with language and speech difficulties so they may receive the special services they need to improve their oral communication.

EDUC 337**Childrens literature Elementary School****Three Credits**

This Course offers future teachers a technical and practical way for the study and analysis of diverse literature genres that correspond to the field of childrens literature, like: story, poetry, drama, songs, games as well as other forms of expresión. The future teacher will develop diverse strategies and resources directed towards introducing students to literary appreciation. The course stimulate and enriches the sensitivity and lexical capacity of future teachers, facilitates communication, socialization, character education, group work and the development of creative skills contributing for students integral development.

EDUC 338**Childrens literature Elementary School****Three Credits**

This Course offers future teachers a technical and practical way for the study and analysis of diverse literature genres that correspond to the field of childrens literature, like: story, poetry, drama, songs, games as well as other forms of expresión. The future teacher will develop diverse strategies and resources directed towards introducing students to literary appreciation. The course stimulate and enriches the sensitivity and lexical capacity of future teachers, facilitates communication, socialization, character education, group work and the development of creative skills contributing for students integral development.

EDUC 339**Inclusion Vision and Process: Management of at Risk Children****Three Credits**

The course centers on the study of the nature and needs of handicapped infants and primary school children. Concepts and factors that determine which children are potentially at risk and will need special services are examined. Emphasis is placed on diagnosis and evaluation, teaching techniques, adaptation of the curriculum, and strategies for early intervention of children with developmental difficulties.

EDUC 350**Theories and Principles of Teaching English as a Second Language****Three Credits**

The course centers on the study of the theories, methodologies and techniques for teaching English as a second language. Students will reflect upon the principles, foundations, studies and supporting research in order to compare their effectiveness or lack thereof in teaching a second language. Students will conduct active demonstrations of techniques based on school visits and observations. They will also reflect on the diversity of their personal teaching styles and how they meet the needs of Puerto Rican students. Future teachers will receive guidance in comparing and analyzing relevant results from research and from their school visits. In this way they will be able to make practical suggestions and recommend effective practices for teaching English as a Second Language in Puerto Rico.

EDUC 355**Evaluation and Measurement of the Educational Process****Three Credits**

The course covers the theory and practice in evaluating the educational process. Emphasis is placed on the taxonomy of objectives and to the skills required for promoting student achievement. Topics include current concepts in evaluation criteria, performance, and mastery testing, among others. Traditional concepts of preparation, administration, correction and interpretation of achievement tests; basic concepts of statistics, and recent evaluation criteria, such as assessment strategies and the use of portfolios, will be discussed and analyzed. The course includes discussions of other evaluation procedures that prospective teachers should be aware of.

EDUC 363**Curriculum Planning and Design****Three Credits**

This course prepares the future teacher in the development of curricular theories. Types of curricula, as well as organization, models and concepts, curriculum development and implementation are examined and analyzed. Lesson planning and classroom organization are also discussed.

EDUC 367**Care of Children in Preschool Education****Three Credits**

The course covers strategies for the physical and emotional care of three- and four-year-olds, including behavior modification techniques and conflict resolution. Health, nutrition, and security aspects related to preschool programs are also discussed.

EDUC 400**Correction of Reading and Writing Difficulties in Secondary School Students****Three Credits**

The course is designed for secondary education majors. It provides future teachers with the necessary skills to identify and correct language difficulties of secondary school students. The application of Spanish language skills in reading and writing across the curriculum will be emphasized, as well as the need to manage reading skills to comprehend and interpret materials in each discipline.

EDUC 401**Clinical Experiences Seminar****Three Credits**

This course is the second clinical experience requirement in the School of Education's Teacher Preparation Programs. It includes fifteen hours of a campus-based seminar and 30 clinical experiences hour of direct observation and active participation in at least two different school scenarios, as well as 15 lecture hours.

EDUC 403**Administration of Preschool and Early Childhood Programs****Three Credits**

The course centers on the study and analysis of knowledge, content and skills required in planning, managing and coordinating educational programs for infants, toddlers and preschool children. Topics discussed are: types of programs, planning and evaluation of goals, selecting and supervising human resources, use and maintenance of physical resources, the role of parents in the education of young children, government agencies that regulate programs and facilities, and current legislation pertaining to preschool and early childhood education. The requirements for opening a preschool or infant day care center will be examined. Clinical experiences are required amounting to at least 15 hours per semester.

EDUC 420**Philosophical Foundation of Education****Three Credits**

Students will examine, analyze, and critique the historical, philosophical and cultural roots of our educational system and its changes over time. The basis for an educational philosophy will be studied, along with social, cultural, religious and political changes that have influenced education in Puerto Rico. Some philosophical concepts will be examined, such as, idealism, realism, pragmatism, existentialism, and constructivism.

EDUC 435**Interdisciplinary Seminar****Three credits**

Professional seminar that integrates the academic, social-humanistic and scientific knowledge that has been developed by the student teacher during his\her formation. Analysis and discussion of tendencies, methods and innovations related to fundamental knowledge and communicative competence of future teachers in their global and local context. Emphasis is given on case studies, problem solving, thematic discussions and technology application.

EDUC 436**Pedagogical Integration Seminar****Three Credits**

This course integrates academic and professional knowledge obtained by future teachers throughout their course of study. Innovations in education, methods, techniques and strategies are discussed and analyzed. A review of sociological, philosophical and psychological foundations of education will be included, as a preparation for the teacher's certification examination.

EDUC 441**Practicum Teaching in Preschool**

This is a laboratory experience for students whose major is preschool education. Student teachers will participate in a real educational setting to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 443**Practicum Teaching in Pre-Kinder to Third Grade****Five Credits**

This is a laboratory experience for students whose major is primary education (K-3). Student teachers will participate in a real educational setting to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 444**Practicum Teaching English in Elementary School****Five Credits**

This is a practicum course for students whose major is the teaching of English at the elementary level. Student teachers will participate in real educational settings to practice knowledge acquired in education courses. They will gradually assume teaching responsibilities in a real classroom.

EDUC 447**Practicum Teaching Forth to Sixth Grade****Five Credits**

This is a laboratory experience for students whose major is Fourth to Sixth Grade Education. The student teacher will participate in a real educational setting to practice

knowledge acquired in education courses. The student teacher will gradually assume the responsibility of teaching in a real classroom.

EDUC 448
Practicum Teaching Spanish in Secondary School
Five Credits

This is a practicum course for students whose major is the teaching of Spanish at the secondary level. The student teacher will participate in real educational settings to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 449
Practicum Teaching English in Secondary School
Five Credits

The course is a laboratory experience for students whose major is one of the content areas in secondary school education. The student teacher will participate in a real educational setting to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 450
Practicum Teaching Mathematics in Secondary School
Five Credits

This is a practicum course for students whose major is the teaching of mathematics at the secondary level. The student teacher will participate in real educational settings to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 451
Practicum Teaching Science in Secondary School
Five Credits

This is a practicum course for students whose major is the teaching of general science at the secondary level. The student teacher will participate in real educational settings to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 452
Practicum Teaching Biology in Secondary School
Five Credits

This is a practicum course for students whose major is the teaching of biology at the secondary level. The student teacher will participate in real educational settings to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 453
Practicum Teaching Chemistry in Secondary School
Five Credits

This is a practicum course for students whose major is the teaching of chemistry at the secondary level. The student teacher will participate in real educational settings to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 454
Practicum Teaching Social Science in Secondary School
Five Credits

This is a practicum course for students whose major is the teaching of social sciences at the secondary level. The student teacher will participate in real educational settings to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 455
Practicum Teaching History in Secondary School
Five Credits

This is a practicum course for students whose major is the teaching of history at the secondary level. The student teacher will participate in real educational settings to practice knowledge acquired in education courses. The student teacher will gradually assume teaching responsibilities in a real classroom.

EDUC 456
Preparatory Course for Cooperating Teachers
Three Credits

This course is designed to prepare k-12 teachers to perform as cooperating teachers in their respective content areas. It includes an analysis of the policies and procedures for the teaching practice, as well as the tasks to be accomplished by each member of the program. It will also study adult education models, teaching practice processes, teaching related laws, professional standards with a focus on diverse techniques and strategies to promote the professional development of teacher's candidates. The topics will be given in context, based on the particular content area to be supervised by the cooperating teacher.

EDUC 457
Cooperative Teacher Recertification Course
One Credit

The course will guide the recertification of cooperative teachers. Normative procedures of the practicum experience will be analyzed. Emphasis will be given to the responsibilities of school personnel, the teacher candidate and the practicum supervisor. It discusses the parameters to guide and structure content: content standards, grade expectations, diverse educational strategies, methods and techniques, and thinking levels, among others. Diverse

topics will be discussed in the context of a particular subject matter o teaching level and according to current educational trends. The course might be offered to preschool to the secondary level teachers. It might combine face to face, online and research modalities.

EDVI 449

Practicum Teaching in Vocational Industrial Education

Three Credits

Practicum course for students whose major is the teaching of vocational industrial at the secondary level in which the student teacher will participate in real educational settings to practice knowledge acquired in education courses. The student teacher will gradually assume the responsibility of teaching in a real classroom.

EDVI 465

Foundations of Vocational Industrial Education

Three Credits

This course examines vocational education, the different laws that regulate the development of vocational and technical education, progress indicators, professional development opportunities, as well as goals and objectives of occupational education. The course includes the development of an action plan to improve teachers' leadership potential, based on current legislation.

EDVI 466

Methods and Curriculum in Vocational Industrial Education

Three Credits

The course covers basic processes needed to analyze competencies and skills that should be developed by students taking vocational and technical courses. Emphasis is placed on the use of official documents that vocational and technical teachers should be familiar with. Alternatives for the integration and adaptation of the curriculum to the work place are studied. Different alternatives to develop measurable objectives based on the standard technological curriculum and skills required in the occupational field are examined.

EDVI 467

Evaluation in Vocational Industrial Education

Three Credits

The course covers techniques and skills used to implement the processes of assessment and evaluation based on competence, standards of excellence, and a log of skills required of vocational students in an occupational setting. Models of scientific instruments to measure the results of the teaching and learning processes will be developed. Students will be able to try out tests and other evaluation instruments they have developed with selected student populations, in order to measure the reliability of these instruments.

EDVI 468

Development of Educational Resources Applied to Vocational Industrial Education

Three Credits

This course has been structured to provide the student with the competencies and skills needed to develop, select, evaluate, and utilize the appropriate educational resources to conduct a vocational course based on industrial and technical education. It includes techniques to ascertain quality control of products and services used to evidence a high sense of responsibility, to demonstrate knowledge of roles, as well as pride in working as an occupational educator. It provides alternatives for the development and production of educational resources that will allow students to perform with excellence.

EDVI 469

Health, Hygiene and Safety in Occupational Education

Three Credits

This course will present students with concepts that promote safety, health, and hygiene in the vocational workshop. It is structured so that students will be able to recognize the principal safety and accident prevention measures required when developing curriculum in the manipulative component of their field of specialization. Students will establish the difference between an accident and an incident and will demonstrate that safety is a personal commitment implying no unnecessary exposure to risks in their workplace. Students will define methods and techniques for accident prevention in industry and will select some of them to use in a research project.

EDVI 470

Student Organizations

Three Credits

The course centers on the development of goals, objectives, functions and purposes of student organizations. Educational strategies in the interpretation of the role of the counselor of student organizations, professional development and the process for the organization of boards of directors for local chapters will be presented. A leadership activities plan will be incorporated to educational competencies to be developed in the vocational workshop.

EDVI 471

Integration of the Adult Student to Vocational Industrial Education

Three Credits

The course centers on the role of adult students in their integration to vocational and technical education, based students' training expectations for entry into the occupational world. It includes industrial practice and skills required in different educational settings. Also included are alternatives for curriculum integration that facilitate the development of instructional units and preparation for the vocational world.

EDVI 472**Organization, Supervision and Administration of the Vocational Workshop****Three Credits**

The course is a discussion and demonstration of functional styles for the organization, supervision and administration of equipment, tools and other educational materials used in the development of vocational and technical courses. The application of competencies developed in the course will be evaluated by means of the organization and presentation of a scale model of a workshop in each student's area of concentration.

EDVI 473**Labor Relations: Implications for Vocational Industrial Educators****Three Credits**

This course is based on existing legislation that promotes unionization of workers in Puerto Rico. The student must examine different examples of the organization of trade unions in the public sector. Through critical analysis the student will recognize and understand current legislation and the rights of employers and employees. Positive and procedural aspects of Law No. 45 (1998) and its implications for the unionization of public employees will be discussed. The recently created law for the teaching profession (Law No. 158, enacted July 18, 1999) and the unionization of teachers is discussed.

EDVI 474**Occupational Internship****Six Credits**

This course is aimed at strengthening the commitment of the vocational educator by keeping abreast with industrial and economic developments within the geographic area of the school where s/he works. The demands of the labor force and the regulations of the Labor Department, the needs and interests of the community, statistical data on employment opportunities, and training needs of the area of specialization will be discussed. The course includes site visits, occupational internships and practice in industry, commerce or banking institutions related to vocational and technical area of expertise.

EDVI 475**The Exceptional Child in the Vocational Industrial Workshop****Three Credits**

The course is a study of provisions, security measures, assessment, alternative evaluation, and technological assistive equipment needed to provide educational opportunities to exceptional students in the vocational industrial workshop. The current categories of special education students, rights and responsibilities of the student, and the vocational teacher and adjustments needed

to accommodate handicapped students in the vocational workshop are discussed.

FSED 105**Freshman Seminar****Three Credits**

The course is designed as a tool to assist college freshmen in achieving the adjustment needed to survive in higher education. It consists of a series of activities and educational experiences aimed at providing first-year students with the study skills needed for academic development. It also provides students with the personal skills needed in making decisions that will result in improving self-esteem, self-recognition and the desire to be successful.

ITAD 106**Introduction to Infants and Toddlers Education****Three Credits**

First professional course in the program sequence of the professional preparation for infants and toddler education level. The purpose of the course is to provide the educator with the opportunity to conceptualize goals and evaluate his/her strengths and weaknesses, in the light of the relevant skills to professional training of early education. It will focus on the observation and analysis of the early childhood setting, as well as the teaching and learning processes. The course involves 15 hours of clinical experience in infant and toddler centers.

ITAD 173**Educational Psychology Cognitive and Physical Development in the Infant and Toddler****Three Credits**

Study of the scientific and psychological foundations that describe growth and development in early childhood and their implications for the teacher and school. It discusses the changes that occur in human beings from the moment of conception and throughout the different stages of life from a physical, cognitive, psychomotor and psychological perspective

ITAD 174**Child Development II: Social and Emotional Aspects****Three Credits**

This course is an overview of the social and emotional development in infants and toddlers. Conceptual and theoretical frameworks about social-emotional development to strengthen and expand the knowledge of professionals for infants and toddlers are examined

ITAD 222**Second language development in infants and toddlers****Three Credits**

The course discusses the development of two languages in infants and toddlers. Students will get acquainted with theories and models that explain the acquisition of two

languages in a diverse cultural setting. Students will investigate and reflect upon the child environmental factors that affect their acquisition of a second language

ITAD 225

Methodology to design developmental environments for infants and toddlers

Three Credits

The course discusses the role of the early childhood educational professionals in the development of creative learning environments. It will emphasize the importance of integration and application of theories that support appropriate practices in the design of learning environments. Research investigations of infants and toddlers learning environment design will be analyzed. Field experiences will be facilitated to provide the opportunity to observe and reflect upon practice in a real setting

ITAD 302

Health, Security, Hygiene and Nutrition: Axes in Early Intervention

Three Credits

The course is intended to train infants and toddlers educational professionals with the required competences regarding topics in health, security, hygiene and nutrition components of applicable to early child intervention. The course facilitates an integrated discussion of those topics to achieve children well being

ITAD 308

Family and Community: Bridges for the Infant and Toddler Formation

Three Credits

The course examines the role of family and community in the physical, mental, emotional and intellectual development of the infant and toddler from birth to age three. The strengths and weaknesses, resources and needs of the family and the community regarding the development of children of preschool and primary grades are identified. The course offers alternatives for the coordination and organization of social, cultural and recreational activities that contribute to the formation of children in this age group, both in educational settings and in the community.

ITAD 339

Inclusion Practices in Infants and Toddlers Developmental Programs

Three Credits

The course analyzes the needs and nature of infants and toddlers regarding appropriate inclusion practices in early childhood developmental programs. It is based on the use of criteria that determines high risk factors during evaluation and diagnosis of children with special needs. The course emphasizes in the acquisition of skills to identify those student that will require a referral to services from the special education program

ITAD 355

Observation techniques for the assessment of infants and toddlers

Three Credits

Evaluation process in young children is a continuous one where observation is used intentionally to know about each child and make decisions about how to help them in their development and learning. This course attempts to analyze the different types of monitoring and assessment techniques recommended to work with children 0-3 years. It will give emphasis to the development of objective observations to achieve the validity and reliability of the assessment or evaluation process

ITAD 363

Curriculum for Infants and Toddlers

Three Credits

Study of the theories related to the development of various specialized curricula for the development of infants and toddlers. Organization, models, curriculum design and concepts that conform these curricula will be discussed. The course will provide the study and analysis of curricular content in the context of the integral development of the child. The intentional teacher concept that facilitates the curriculum for infants and toddlers will be studied

ITAD 401

Clinical Experiences Seminar

Three Credits

TAD 401 is the first clinical experiences requirement in associate degree program. It includes fifteen hours campus-based seminar and 30 clinical experiences hours of direct observation and active participation in at least two different school scenarios.

ITAD 403

Creation and Management of Environment for Infants and Toddlers

Three Credits

This course presents the policies and regulations governing the establishment and development of an educational center for infants and toddlers. It analyzes the knowledge and skills needed for planning, administration and coordination of these programs. During the following course issues will be discussed: factors to consider when opening a center for infants and toddlers, the laws governing the opening of a center for infants and toddlers, the spaces needed inside and outside the center, and the materials and suitable equipment; as well as administrative aspects to consider when evaluating the physical infrastructure and personnel of the center.

ITAD 440

Practice at Toddler's Developmental Environments

Three Credits

Practicum course for students majoring in the infant and toddler education major. Clinical experience in which the

student applies the knowledge, skills and attitudes acquired in previous courses. The student assumes the responsibility of leading the learning process of a group of toddlers

ITAD 441

Practice at infants' development environments

Three Credits

Practicum course for students majoring in the infant and toddler education major. Clinical experience in which the student applies the knowledge, skills and attitudes acquired in previous courses. The student assumes the responsibility of leading the learning process of a group of infants.

MATH 126

Fundamental Topics in Mathematics II

Three Credits

This course includes problem-solving, set theory, logic, geometry, measurement, probability, statistics, theory of numbers, and fundamental topics for students of the Schools of Education, Humanities and Office Administration.

PERT 102

Introduction to Sport Massage Techniques

Three Credits

This class will have theoretical and practical sessions. The students will learn about concepts and history related to massage. Each concept will include the effects of massage, their benefits, indication and contraindication, as well as the importance of the student and client posture in each massage technique. The use of material and equipment that is needed in each modality will also be discussed.

PERT 103

Programs for Multiple Exercises

Three Credits

The course exposes the student to different alternate modes of training to stimulate the different physiological systems of the human body. These exercises stimulate adaptations of the cardiovascular and musculoskeletal systems, in an effective and varied way, to these exercises.

PERT 104

Strategic Management for the Personal Trainer

Three Credits

This course is intended to develop skills and knowledge necessary to develop a personal training business. Basics you should know the personal trainer, personal qualifications for successful practice as a personal trainer, mission and development work plan, how to develop an effective program of exercises appropriate and individualized.

PERT 105

Advance Evaluation and Management of Athletic Injuries

Three Credits

This course consists of theory and practice of the procedures and techniques of evaluation, assessment and value of acute

and chronic athletic injuries of the human body (upper and lower extremities). Non-traumatic pathologies will be studied, as well as mechanical injuries, muscular skeletal and dermatological disorders.

PERT 106

Design Programs for Cardiovascular and Strength Training

Three Credits

This course is designed to teach students to develop, implement and evaluate training programs on strength and resistant training, the student will learn to create strategies and plan the physical loads through various systems of modern strength and resistant training. The student will have a theoretical and practical training which will develop plans to achieve an improvement in athletic performance for both collective and individual sports.

PERT 107

Special Exercise Program Design

Three Credits

The class will discuss the exercise prescription and health promotion for especial population and will use the guidelines by the American College of Sports Medicine (ACSM) and the National Strength and Conditioning Association (NSCA). The students will also learn about chronic conditions that require especial and individualize attention.

PERT 108

Analyzes of Current Issues in Personal Training

Three Credits

The course analyzes various personal training issues facing Puerto Rico and the world today. Focus is placed on the analysis and discussion of contemporary issues related to health, physical fitness, and training, and their impact in methods of personal training.

PERT 109

Clinical Practicum in Personal Training

Three Credits

This course offers the student a practical experience, which integrates with theoretical courses and is under the direct supervision of a professional. These experiences will take place during the normal working hours of the wellness center of the university. The student will participate actively in the center, performing personal fitness duties for the university community. The student will also have active participation in administrative and organizational areas of personal fitness.

PHED 103

Track and Field

Three Credits

The course covers the history, scoring and basic skills for the different events, and offers basic skills practice.

PHED 105
Physical Fitness and Gymnastics
Three Credits

The course emphasizes the importance of gymnastic and physical exercise in the development of the human body. It involves practice of the different gymnastic skills and tests of physical fitness.

PHED 106
Basic Rhythms
Two Credits

The course covers the theory and practice of the basic rhythms used in the physical education program. It emphasizes the creation of movement patterns by students.

PHED 107
Games and Sports for Elementary School Teachers
Three Credits

The course is a study of the history and evaluation of games as a teaching vehicle. It also covers the methodology used for teaching games at the elementary level. Special attention is given to teaching techniques. It also equips the elementary school teacher with the ability to handle and control a group in an outdoor game area.

PHED 108
Tennis
Two Credits

The course covers the history, rules, scoring and elementary tactics of single and doubles games. Basic skills are practiced.

PHED 109
Swimming
Two Credits

This is a practical course in which the student learns the skills and basic styles of swimming. Water safety measures are emphasized.

PHED 112
Volleyball and Basketball
Three Credits

The course covers the history, rules, scoring procedures and elementary techniques of the games, as well as practice of the different skills in volleyball and basketball.

PHED 113
Softball and Soccer
Three Credits

The course covers the history, rules, scoring, basic techniques, and strategies of the games. It offers basic skills practice and develops the ability to coordinate motion in different aspects of the game.

PHED 201
Principles and History of Physical Education
Two Credits

The course covers the history, objectives, and principles of physical education. Contemporary issues of physical education in different societies and cultures are also studied.

PHED 202
Development of Motor Skills in Elementary School
Three Credits

The course enables future teachers to develop and refine students' movement patterns. It emphasizes practice of fundamental skills to optimize their motor development, including manipulative movements, rotational, static, and dynamic stability.

PHED 203
Organization of Simple Games
Two Credits

The course centers on the study, analysis, and practical application of simple games, especially designed for teaching physical education in the elementary school.

PHED 204
First Aid
Two Credits

The course covers the application of first aid in physical education activities in school and community.

PHED 205
Organization and Administration of Physical Education
Three Credits

The course centers on the principles of administration and supervision of physical education programs, techniques of group dynamics, and organization of different school activities.

PHED 206
Physiology of Exercise
Three Credits

Fundamental aspects of physiology and its relationship to physical education are emphasized. Students will study basic concepts of muscular concentration, muscular strength, nervous control of muscular contraction, calcium dissipation in the human body, cardiovascular aptitude, resting electrocardiograms, as well as the effects of isometric exercise on heartbeat, blood pressure, and other vital functions.

PHED 207
Physical Education of the Handicapped Child
Three Credits

Students will study a variety of educational opportunities that allow maximum development of the individual's capacity. Special attention is given to techniques which enable children with physical and mental disabilities to

participate in physical activities within the limitations of their capacities.

PHED 208

Anatomy and Kinetics

Three Credits

The course centers on the study of gross anatomy. It emphasizes systemic anatomy, with special attention to the muscles, bones, nerves, and articulations related to physical activity.

PHED 209

Physical Education and Health Laws

Three Credits

Students will study and analyze the laws and regulations regarding physical education, health and sports in Puerto Rico. Emphasis is given to case studies related to negligence, constitutional issues, and risk management. Judicial procedures and the legal foundations of administration are discussed.

PHED 210

Health, Hygiene and Nutrition

Three Credits

The course covers the theory and practice of the components of wellness and physical fitness lifestyles. Medical records and health risk profiles are developed and physical fitness levels are established. Students are exposed to information, activities, techniques and strategies to obtain and maintain acceptable levels of physical fitness that allow an effective life. Lifelong sports, weight control, stress management, and nutritional theories will be discussed.

PHED 211

Sports and Games for the Elementary Level

Three Credits

Theory and practice of strategies and foundations for the integral development of the elementary level student through physical activities and motor development. It emphasizes physical fitness, neuromuscular development, motor perception and socio-emotional development. Games and specific activities for the development of these areas are conducted.

PHED 220

Anatomy and Physiology

Three Credits

The course includes the study of gross human anatomy and the physiological changes in different body systems during physical activity. Joint movements and muscle actions are studied, as well as basic mechanical principles applied to body movements in different sports.

PHED 221

Motor Skills Development, Simple Games and Sports at the Elementary Level

Three Credits

The course covers the theory and practice of strategies and foundations for the integral development of the elementary level student through physical activities and motor development. It emphasizes physical fitness, neuromuscular development, social-emotional development, perception, manipulative movement, and rotational stability. Games and specific activities for developing these areas are conducted.

PHED 222

First Aid and Swimming

Three Credits

The course covers the theory, methodology and practice of swimming and first aid. Swimming styles, such as freestyle, backstroke, and breaststroke, are emphasized. Survival modalities such as back and side sliding are practiced as well. Basic techniques of first aid, in accordance with American Red Cross guidelines, are discussed and practiced.

PHED 223

Team Sports

Three Credits

The course centers on the theory and practice of team sports such as volleyball, basketball, softball, baseball, and soccer. Historical evaluations of the sports are emphasized, as are its foundations, rules, techniques, tactics, and physical conditioning. Roles of the referees and officials are discussed.

PHED 224

Individual Sports

Three Credits

Students will study the history, rules, techniques, and teaching methodology of tennis, as well as track and field. Rules for scoring track and field events and tennis are discussed.

PHED 300

Methodology and Teaching of Physical Education at the Secondary Level

Three Credits

The course centers on analysis, interpretation and implementation of the curriculum and methodology of physical education.

PHED 301

Methodology for Teaching Physical Education in the Elementary School

Three Credits

The course covers theory, methodology and practice of the learning process in physical education at the elementary level. It emphasizes the development of skills to integrate various pedagogical techniques in a comprehensive planned

individual system. Classroom management, performance analysis, assessment and evaluation are discussed.

PHED 302

Administration and Organization of Physical Education at the Elementary Level

Three Credits

The course centers on principles related to the administration, organization and supervision of physical education programs at the elementary level. It emphasizes the ability to optimize teaching environments that promote learning and applying theories of administration.

PHED 305

The Methodology and Curriculum of Physical Education in the Elementary School

Three Credits

The course covers theory, methodology, practice, and curricular models of the learning process in Physical Education at the elementary level. Theories, curriculum types, models, designs, and concepts are analyzed and evaluated. The course emphasizes the development of skills to integrate essential pedagogical knowledge, such as a comprehensive planned individual system, classroom management, performance analysis, assessment and evaluation. The constructivist paradigm is applied during the course. Computers and their applications are used as tools in the course.

PHED 354

Measurement and Evaluation of Physical Education

Three Credits

The course centers on administration and evaluation of tests of strength, general motor ability, motor fitness, endurance, and skills. The course also covers testing in social development, body mechanics, and nutritional measurements, as well as somatotyping. Basic statistical techniques and design of testing methods are included.

PHED 355

Evaluation and Investigation in Physical Education

Three Credits

Throughout the course students gain knowledge about different techniques and methods in measurement, assessment, evaluation and investigation processes, in relation to relevant objectives in Physical Education. Data from tests are statistically evaluated by students, who are also initiated in basic research methodology.

PHED 356

Organization and Administration of Physical Education K-12

Three Credits

Study of the principles related to the administration, organization and supervision of the Physical Education Program from K through 12. Emphasizes the ability to optimize the teaching environment that promotes learning

and the application of administrative theories and strategies in physical education from K through 12.

PHED 363

Planning and Curricular Design of Physical Education

Three Credits

The course is based on the evaluation and analysis of theories and curriculum models of physical education. It qualifies the student to implement, modify, and to design curricula that deal with various educational needs, fiscal situations and physical facilities. The course is based on the constructivist paradigm in which the teacher becomes a facilitator within the teaching-learning process. The students are encouraged to use the computer as a valuable tool.

PHED 447

Elementary School Practicum Physical Education

Five Credits

The course offers students practical experience in an educational setting which represents a broad diversity of social aspects. Practice is offered over an extended period, wherein the student assumes the responsibility of teaching in a school setting under supervision of qualified personnel.

PHED 449

Secondary School Practicum

Five Credits

This practical and functional course for prospective teachers involves clinical practice in teaching physical education at the secondary school level.

RECR 201

Introduction Recreation

Three Credits

The course will familiarize students with the relationship between recreation and leisure and the western culture. Specifically students will be introduced to the many effects that recreation has on society including, but not limited to the economic impact on leisure and recreation, recreation as a modifier of culture and recreation and leisure as it relates to life stages and health.

RECR 202

Leisure of Life Style

Three Credits

The course examines the role of recreation and leisure in contemporary society. Discusses the conceptual foundations and methods of analysis from a sociological perspective on the management of leisure and lifestyle in Puerto Rico. Leisure is examined from its influence on society in their ideologies and beliefs, social institutions and the impact on different population groups.

RECR 203**Recreational Programming****Three Credits**

The course emphasizes the student's knowledge in the design and implementation of recreation programs from institutional and community approach to the different population groups. It focuses on areas such as social diagnosis and human development strategies in exploring alternative leadership for the creation of community recreational program offerings.

RECR 204**Planning and Management Recreation Facilities****Three Credits**

The course provides an opportunity for the students to analyze the planning, design, construction, management and use of public, private and commercial recreation areas and facilities.

RECR 205**Commercial and Tourism Recreation****Three Credits**

This course focuses on the purpose and function of the leisure delivery system in the commercial setting. Development and operation of commercial goods and service oriented businesses as well as small businesses management will receive considerable attention.

RECR 206**Management Recreational Services****Three Credits**

The course aims to introduce students to the study of performance and recreational system problems in Puerto Rico. Emphasis on the analysis of leisure services in the public sector, private sector and nonprofit organizations provided to the communities and among different populations.

RECR 207**Inclusive Recreation****Three Credits**

This course is based on the promotion of concepts, methods and strategies related to recreation services for special population. It emphasizes an inclusive approach in the various community recreation programs.

RECR 300**Leadership and Supervised Recreational System****Three Credits**

This course will provide students with the opportunity to learn about leadership and methods of leading recreation activities. The course will focus on theory, technique and application of personal leadership skills in a recreation setting. Leadership as a field of study and personal development will be emphasized allowing each student to experience leadership in a recreational environment. Students will be introduced to leadership styles,

characteristics, and practices including group dynamics and direct service leadership methods.

RECR 301**Evaluation and Research Recreation****Three Credits**

The course aims to introduce students to methods of applied research and evaluation of recreation. It emphasizes action research on problems of institutional and community recreation in Puerto Rico.

RECR 400**Seminary Recreational Practice****Three Credits**

The Recreation Practice seminar will provide students with practical experience and professional future of recreation in an agency to provide services in any sector of the recreation system in Puerto Rico.

SHED 101**Foundations of Health Education****Three Credits**

The course Foundations of Health Education studies the historical development of the Health Education Promotion disciplines: its philosophy, goals, and objectives. The most common models of health education are discussed. Educational principles, strategies, and methods used in the discipline are presented. Emphasis is placed on group work for planning health activities during health learning process.

SHED 102**Health, Life and Well Being****Three Credits**

The course of Health, Life and Well-being is designed to facilitate in the students the acquisition of the basic concepts of health. Theories such as Health Belief Model, Theories of Reasoned Action, and others, are discussed. The fundamental purpose of this course is to foster in the students the desire to actively use their own reality and experience to develop the necessary skills for making informed decisions to live healthy lifestyles from the holistic perspective of health and well-being. It is expected that the students carry on an auto evaluation to make the necessary modifications towards a healthier life. In addition, students are provided the opportunity to participate in various activities that allow them to develop the skills that will help them to value their health and make responsible decisions that promote healthy life style.

SHED 103**Prevention and Control Illness and Disorders****Three Credits**

The course of Disease Prevention and Control is designed to facilitate in the students the acquisition of basic knowledge of the illness process and its cause. The fundamental purpose of this course is to foster in the students the desire to actively use their own reality and experience to develop

the necessary skills for making informed decisions to live healthy lifestyles from the holistic perspective of health and well-being. It is expected that the students carry on an auto-evaluation to make the necessary modifications to keep themselves illness free or to effectively manage existent health conditions.

SHED 104
Health and Safety
Three Credits

The course of Health and Security provides the students the opportunity to develop the capacity of interpret information about promotion of security. The course includes discussion of habits that promotes security, basic rules to avoid or minimize the possibility of accidents and disasters, and the correct way to handle those situations. Also, the students will gain understanding of the promotion of security rules and the appropriate procedures of first aid and cardiovascular pulmonary resuscitation (CPR). Students will be prepared to be certified on the field and develop plans to face natural disasters.

SHED 105
Human Sexuality
Three Credits

The course Human Sexuality is framed within the Constructivist Theory and provides students with the opportunity to examine their beliefs, values and attitudes about the topic. Also, students participate in various activities that foster the acquisition of knowledge required to value and make responsible decisions about the kind of sexuality that promotes healthy life styles. Topics discussed in this course are gender construction, orientation or sexual preference, sexual education, and sexually transmitted diseases, among others.

SHED 106
Mental Health in the School Context
Three Credits

Introduction to the principles and theories of positive mental health and human behaviors. Topics include emotional responses, coping mechanisms, and therapeutic communication skills in the school context. Team work is emphasized in planning of mental health activities and in appropriate educational processes aimed at promotion of student emotional well-being.

SHED 107
Environmental Health in the School Context
Three Credits

The Environmental Health course examines the physical, social and biological components of the ecological system. The course is designed to promote the student's acquisition of the basic knowledge of environmental pollution and its effect on natural resources. Furthermore, various environmental control strategies to promote human being's health and well-being are discussed.

SHED 108
Gerontology in the School Context
Three Credits

The course is an introduction to gerontology concepts with focus on the school context. The human life cycle is presented through the physical, social and emotional changes that occur in the aging process. The course also examines sexuality, retirement, depression and other psychological and sociological issues of the elderly including stereotypes and social prejudices.

SHED 109
Teaching Methodology for Health Education
Three Credits

The activities contained in SHED 109 offer the student a rich constructivist perspective. In the course the student examine the curricular models and approaches for the teaching of health in school, standards, general learning perspectives by grades, curricular framework, and the Health School Program operational policies. The teaching of health requires the student revision of the basic content, methodology of teaching, planning, and evaluation of learning. Also the student analyses the importance of skills and attitudes development in health teaching. Through course activities the student will develop intellectual skills that will enable him to investigate, content adaptation, resources evaluation to address the needs and interests of the students as well.

SIGN 101
Visual-Gestural and Body Language Communication
Techniques
Three Credits

This course focuses on nonverbal aspects of communications, which are an integral part of communication in all sign languages. Emphasis is given to the use and understanding of facial expressions, gestures, pantomime, and body language. The students will develop their visual readiness and ability to think in pictures instead of words. The focus is on using the body, the face, and the hands to communicate meaning.

SIGN 102
Sign Language I: Foundations, Spelling and
Numbers
Three Credits

The course is designed for the student who does not have previous Sign Language experience. The purpose of the course is to develop receptive and expressive skills directed towards the development of basic dialogue, and is taught in a functional scenario. The dialogues are geared to conversations related to daily interactions: introducing oneself, exchanging personal information, talking about the surroundings, and indicating where one lives. Students will also learn about the deaf community and its culture.

SIGN 102 – L**Sign Language I: Foundations, Spelling and Numbers Lab****One Credit**

The course is designed for the student who does not have previous Sign Language experience. The primary purpose of the course is to develop receptive skills and expressive skills, directed towards the development of basic dialogue, and is taught in a functional scenario. Development of strong skills in finger spelling and numbering is also emphasized. The dialogues will be geared to conversations related to daily interactions: introducing oneself, exchanging personal information, talking about the surroundings, and indicating where one lives. Students will also learn about the deaf community and its culture.

SIGN 103**Sign Language II: Conversations****Three Credits**

The course is designed for the student who has previous Sign Language experience. The purpose of the course is to develop abstract concepts and to teach students to express themselves about issues outside the classroom setting. In this course students will also develop narratives and learn how to locate objects and persons. The students will have the opportunity of learning cultural aspects of the deaf community. They will also learn conversational strategies and how sign language users maintain each others' attention.

SIGN 103 L**Sign Language II: Conversations Lab****One Credit**

The course is designed for the student who has previous Sign Language experience. The purpose of the course is to develop abstract concepts and to teach students to express themselves about issues outside the classroom setting. In this course they will also develop narratives and learn how to locate objects and persons. The students will have the opportunity of learning cultural aspects of the deaf community. They will also learn conversational strategies and how sign language users maintain each others' attention.

SIGN 104**Sign Language III: Narratives****Three Credits**

The course is designed for the student who already has Sign Language skills. The purpose of the course is to develop the linguistic abilities necessary to explain ideas or concepts, describe how and why things are, and how they work. The course will help students develop the ability to translate from written text to Sign Language. The students will use Sign Language to express experiences, stories, and other aspects of a narration. Information about the linguistic vocabulary and cultural aspects and will be presented using

Sign Language as the primary language and Spanish as the secondary language.

SIGN 104 L**Sign Language III: Narratives Lab****One Credit**

The course is designed for the student who already has Sign Language skills. The purpose of the course is to develop the linguistic abilities necessary to explain ideas or concepts, describe how and why things are, and how they work. The course will help students develop the ability to translate from written text to Sign Language. The students will use Sign Language to express experiences, stories, and other aspects of a narration. Information about the linguistic vocabulary and cultural aspects and will be presented using Sign Language as the primary language and Spanish as the secondary language.

SIGN 106**Visual gestural communication and Classifiers****Three Credits**

This course will develop Sign Language skills through the use of descriptive classifiers and non-manual signals. It will assist the student in acquiring fluent fingerspelling and the use of visual receptive and expressive skills. It will also provide concentrated instruction and practice in cardinal and ordinal numbers as well as number incorporation. A brief history of the different manual alphabets used in different countries will be included.

SIGN 106 – L**Visual gestural communication and Classifiers Lab****One Credit**

This course will develop Sign Language skills through the use of descriptive classifiers and non-manual signals. It will assist the student in acquiring fluent fingerspelling and the use of visual receptive and expressive skills. It will also provide concentrated instruction and practice in cardinal and ordinal numbers as well as number incorporation. A brief history of the different manual alphabets used in different countries will be included.

SIGN 122**Sign Language Discourse****Three Credits**

This course will help students to gain an understanding of discourse, and to recognize features of discourse used in American and Puerto Rican Sign Language, such as register, spatial mapping, prosody, discourse structures, rhetorical analysis, involvement and interaction strategies, as well as coherence and cohesion, and framing. Students will enhance their own use of American and Puerto Rican Sign Language through incorporation of those features. The laboratory will provide an interactive experience in environments in which the students will have the opportunity to observe features of American and Puerto Rican Sign Language discourse that are explored in class.

SIGN 203**Introduction to Sign Language Interpreting****Three Credits**

This course will provide students the opportunity to know the history of interpretation, the terminology used in the field and the competence that a sign language interpreter needs to have. Students will also learn basic ethical concepts, dress codes and the diverse work scenarios. During the semester, students will have the opportunity to watch demonstrations in the classroom and to discuss different cases.

SIGN 302**Ethical and Professional Principles in Interpreting****Three Credits**

Interpreters are often in situations that may conflict with their own value systems. This course will provide an exploration of the personal ethics and values that influence the decision-making process. Students will: identify the source of conflicts; analyze the situation from the perspectives of the deaf clients, agency and interpreter, and make recommendations for action. Students will examine moral considerations and ethical systems, address power relationships between the non-deaf interpreter and the Deaf Community, and incorporate their impact in functioning as facilitators of communication. Students will use case studies to explore issues, make recommendations and discuss the consequences of each decision.

SIGN 400**Simultaneous Interpretation****Three Credits**

This hands-on course will provide in-depth study and practice of interpretation through the understanding and use of the simultaneous model of interpretation. Students will further develop requisite skills such as text analysis, mind mapping/visualization, multi-tasking strategies, prediction and anticipation. Furthermore, they will be exposed to process management skills and will enhance their use of tools for self-analysis and peer feedback. Skills in both voice-to-sign and sign-to-voice will be studied and practiced during class work.

SIGN 401**Interpretation Internship I****Three Credits**

This hands-on course will provide in-depth practice of Sign Language interpretation through the understanding and use of consecutive and simultaneous modes of interpretation and transitioning to real life scenarios. Students will build skills and knowledge in live settings through continued practice of discourse analysis, visualization, process management skills and tools for self-analysis and peer feedback. Students will be assigned to various scenarios to practice voice-to-sign and sign-to-voice skills with various levels of complexity and registers.

SIGN 402**Interpretation Models****Three Credits**

This course will provide further in-depth study and practice of Sign Language interpretation through the understanding and use of the simultaneous mode of interpreting. Students will focus on both individual and team interpreting and will work with selected team mates in two separate rotations. They will compare transliteration and interpretation and will practice both methods. Students will also review the business of interpretation and the settings in which interpreters work, as they prepare to begin working in the field as interpreters. Deaf individuals will be invited to class to participate as the audience for interpreting practice.

SIGN 405**Interpreting Idioms and Culture****Three Credits**

This course is designed to enable the interpreting student to list and study many of the different cultural idioms in Puerto Rico and other Spanish-speaking communities. Through the use of comparison and analysis of traditional and typical phrases, the student will be able to look for meaning in various contexts. This course will help the student with the development of analytic thinking to be used in any interpreting situation of idiomatic phrases. The student will also analyze songs, poetry and theater. Students will have both didactic and practice experiences in the classroom.

SIGN 407**Educational Settings Interpretation****Three Credits**

This course is designed for the advanced interpreting student. The purpose of the course is to increase the knowledge of interpreting students who wish to work in the education field. Students will have the opportunity to know the laws that apply to consumers and to interpreters at the different levels of education. Students will have the opportunity to learn about the administrative processes of special education, including COMPU meetings and PEI development. They will learn the vocabulary related to school assignments in the elementary, intermediate, secondary, and university levels.

SIGN 416**Psychosocial Aspects of Deafness****Three Credits**

This course will study the psychological, emotional and social impact of hearing loss throughout the cycle of life. The role of the interpreter as a non-professional advocate in the rehabilitation process of people who have hearing loss and their families will also be considered.

SPED 214**Assistive Technology in Special Education****Three Credits**

Students will study methodologies, techniques and innovative strategies needed to teach special education students effectively. Emphasis is placed on current research, identification of needs of exceptional children that can be met through use of computers, evaluation and prescription of software, hardware, and assistive devices.

SPED 216-217**Teaching Reading and Writing to Students with Disabilities I and II****Three Credits**

The course is an analysis of strategies, techniques and methods used to teach reading and writing to students with disabilities. It includes the study of instruments to diagnose, assess and prepare individualized educational programs. Materials preparation, using the computer to teach writing, as well as diagnostic and remedial teaching of writing skills are also included.

SPED 218**Methodology for Teaching Mathematics in Special Education****Three Credits**

The course is an analysis of the curriculum content in mathematics from K-11 with special emphasis on adaptations, methodology and assessment strategies for students with disabilities.

SPED 301**Nature and Needs of the Mildly Handicapped****Three Credits**

The course centers on research, observation, analysis and discussion of the needs of the mildly handicapped. It emphasizes the establishment of levels of comparison with the "normal" child. The course includes demonstrations and practice. Participatory experience equivalent to ten hours of clinical experience will be required.

SPED 304**Nature and Needs of the Severely Handicapped****Three Credits**

A comprehensive study of the natural development (physical and psychological) and technical needs of the severely handicapped, as well as corrective and/or rehabilitation methods for them. The course emphasizes teaching methodology and curriculum.

SPED 305**The Family and the Education and Counseling of Children with Special Needs****Three Credits**

The course covers principles and processes in individual and group programs for parents of children with special needs in school, day care, and residential settings. It includes topics

such as family therapy, parent education, and the parent-school relationship.

SPED 307**Pre-Vocational and Vocational Education****Three Credits**

The course covers pre-vocational competences to be developed by the severely handicapped. Emphasis is placed on the development of skills needed in the work environment, such as oral expression, following instructions, using the telephone, money and exchange, survival vocabulary, simple systems of weights and measures, and simple rules for the world of work. Personal grooming, appearance, punctuality and responsibility are also emphasized. The course includes visits and clinical experience in pre-vocational and rehabilitation centers.

SPED 310**The Emotionally Disturbed Child in the Classroom****Three Credits**

The course centers on the nature of children who have emotional problems, as well as their social, psychological and educational needs

SPED 311**Services and Education for the Handicapped Child****Three Credits**

The course is an analysis of current civil rights legislation regarding the disabled in Puerto Rico and the United States. It emphasizes application of legislation and repercussions in the courts. It includes clinical experiences, including research, planning, and educational work with parents.

SPED 312**Education of Children with Specific Learning****Disabilities****Three Credits**

The course centers on basic learning disabilities due to minimal brain damage such as: aphasia, dyslexia, dystrophia, and dyscalculia. It also covers psychosocial, motor, perceptual and linguistic development, as well as special educational experiences of the child with these conditions. Emphasis is placed on diagnostic skills. Participatory experiences equivalent to ten hours of clinical experiences will be required.

SPED 315**Teaching Exceptional Children****Three Credits**

This introductory course in special education centers on the analysis of social, emotional and educational needs of children with different exceptional qualities. It includes diagnosis; educational and rehabilitation services; family and community attitudes, and civil rights. Emphasis is placed on the educational needs and learning styles of exceptional children, teaching methods, techniques and curricular content.

SPED 316**Education of the Deaf Child****Three Credits**

The course centers on basic principles of teaching the deaf child, as well as the psychology of children with hearing impairment. Participatory activities equivalent to ten hours of clinical experience will be required.

SPED 317**Education of Mildly Retarded Children****Three Credits**

The course covers causes, manifestations, problems, and identification of mental retardation. It includes characteristics and education of educable retarded children and adolescents. Topics include teaching techniques, educational approaches, curriculum, and physical facilities. Participatory experiences equivalent to ten hours of clinical experience will be required.

SPED 318**Education of Children with Severe Mental Retardation****Three Credits**

The course centers on causes, manifestations, problems, and identification of children at a trainable level of mental retardation. Topics include characteristics and education of trainable mentally retarded children and adolescents. Teaching techniques, educational approaches, curriculum, and physical facilities are also covered.

SPED 319**Psychology of the Deaf Child****Three Credits**

The course is a comprehensive study of the history, psychology, educational and vocational opportunities, attitudes and social organizations pertaining to deaf children.

SPED 324**Behavior Modification of the Handicapped Child****Three Credits**

The course offers basic knowledge of the nature, psychosocial, and educational needs of the child with severe emotional disturbances. Topics emphasized include mutes, infantile schizophrenia, phobic neuroses, and educational handling of children with these conditions in a special classroom. The course includes clinical experience.

SPED 327**Teaching Communication to the Deaf Child****Three Credits**

The course is a comprehensive study of different approaches to teaching communication to deaf children, as well as the advantages and disadvantages of these approaches. It includes practice of the methodology of each approach.

SPED 337**Curricular and Methodological Adaptation for Children with Cerebral Palsy and other Muscular-Skeletal Problems****Three Credits**

The purpose of this course is to equip the prospective special education teacher with basic knowledge relevant to the nature and educational needs of the children with cerebral palsy and other muscular-skeletal conditions. Topics include the children's learning disabilities, strategies used in their education, and necessary curricular adaptations.

SPED 338**Diagnosis and Prevention of Hearing Disabilities****Three Credits**

The course aims to equip the prospective teacher of exceptional children, specifically deaf children, with technical knowledge regarding this complex condition. Classification, anatomy and physiology of the hearing mechanism, diagnostic and rehabilitation tools and preventive methods are studied. Deafness and the hearing process are analyzed.

SPED 339**Management of At-Risk Children or Children with Developmental Deficiencies****Three Credits**

The course centers on the nature and needs of handicapped infants, toddlers and preschool children. Concepts and factors in determining which children are potentially at risk of needing special education services are examined. Emphasis is placed on diagnosis, evaluation, teaching techniques, adaptation of the curricula, and strategies for early intervention of children with developmental deficiencies.

SPED 340**Language Disorders due to Neurological Damage****Three Credits**

The course provides the prospective teacher of exceptional children with basic knowledge of neurologic and psycholinguistic functions that enable identification, handling and stimulation of the child with language disorders due to brain damage. Topics include theories of language formation and the study of encephalic development, as well as its logopedic functions.

SPED 341**Psychology and Education of the Legally Blind****Three Credits**

The course provides the prospective special education teacher with the knowledge necessary to teach the blind child. Emphasis is placed on Braille, reading and writing, longhand, as well as the use of traditional methods and recent innovations in the field of education of the blind.

SPED 342**Education of the Child with Superior Intelligence****Three Credits**

The course provides the prospective special and regular education teacher with the knowledge needed to deal with the social, psychological and educational needs of the gifted child. Emphasis is placed on the child's problems in adjusting to the regular curriculum and strategies for the child's education.

SPED 349**Methods and Techniques for the Education of Students with Hearing Impairments****Three Credits**

This course includes the study of skills and knowledge needed to evaluate students with hearing impairments, as well as an examination of emerging technology for sound amplification. Different programs for auditory training are also discussed, and methods and techniques for aural rehabilitation are analyzed. Topics include educational approaches used to help children with hearing impairments succeed in school and to improve their social skills.

SPED 360**Methodology for the Teaching of Exceptional Children****Three Credits**

The course centers on characteristics and learning styles of the exceptional child; evaluation and educational prescription; special equipment and teaching materials; educational technology and its adaptation to the exceptional child; curriculum adaptation; preparation of objectives, and daily, individualized teaching plans. Emphasis is placed on demonstrations and practice.

SPED 445**Special Education Practicum: Speech, Language and the Hearing Impaired****Five Credits**

The course emphasizes laboratory experiences in which the student teacher practices knowledge acquired in special education courses. Student teachers assume responsibility for teaching a group of students at the level, grade, and exceptionality for which they have prepared.

SPED 446**Special Education Practicum: The Mildly Impaired****Five Credits**

This is a practicum course for students whose major is the teaching of special education of the mildly impaired at the secondary level. Student teachers will participate in real educational settings to practice knowledge acquired in education courses, and will gradually assume the responsibility of teaching in a real classroom.

SPRT 101**Sport Pedagogy****Three Credits**

The course centers on the study of the theory and practice of the process of sports teaching and learning, particularly on tactical and technical aspects, as well as on mental skills. It emphasizes knowledge of the means and teaching methods of sports skills through the organization of a training session for children and young athletes.

SPRT 102**Methodology for Training****Three Credits**

The course centers on the study of the principles and methods of training used for sports practice involving children and young persons. Emphasis is on achieving an understanding of the theoretical perspectives, the capacity for sports performance, the phases of sports formation, the demands of controls and competitions involving children and young persons.

SPRT 103**Physiology for Sport Fitness Performance****Three Credits**

The course centers on the study of the biological bases of the effects of physical exercise in training of children and youths. Basic principles are established for improving physical capacities with a focus on the prevention of the inconveniences caused by excessive loads in sports training. The biological bases of the effects of physical exercise in the training of children and youths are also established.

SPRT 104**Methodology of Physical Training****Three Credits**

The course centers on the study of the means and methods for conditioning physical capacities and coordination during sports preparation of young and child athletes. The course offers orientation in the planning and organization of optimum training loads according to the phases of biological maturation.

SPRT 105**Philosophical and Ethical Principles for Coaches****Three Credits**

The course centers on the study of the ethical and philosophical principles that guide the behavior of coaches. Emphasis is placed on how coaches' compliance is vital for the successful integral development of children and youths, and their motivation towards sports practice. The course also emphasizes that students understand that the development of a code of ethics and social responsibility results in the development of equity, inclusion and solidarity in sports programs.

SPRT 106**Fundamental Analyses of Sport Movement****Three Credits**

In this course, students will study the fundamentals in order to understand the analysis of the mechanics of movement in sports. Students will analyze the techniques of a sport and how to utilize that knowledge to improve performance and skills, as well as to identify and correct errors in the athlete's execution.

SPRT 107**First aid for Specific Sport Injuries****Three Credits**

The course centers on the study of the bases and guides for intervention protocols in emergency situations, that is, in case of specific injuries during sports practice. Emphasis is on the management of a series of prevention strategies to reduce sports injuries, the reduction of the risks during practice, and the development of a contingency plan.

SPRT 108**Sport Management for Coaches****Three Credits**

The course centers on the study of the organization and administration of sports programs for children and youths.. Emphasis is placed on devising a strategy that is compatible with the philosophy and objectives that support the integral development of children and young persons. Topics include establishment of health risks in sports programs, and reducing negligence, as well as planning for the growth of economic support and the organization of sports events.

SPRT 109**Concepts of Sport Psychology****Three Credits**

The course is an introduction to the study of the behavior of athletes in terms of motivation and learning. Topics include management of the anxiety, relaxation techniques, planning and mental training.

SPRT 110**Sport Coaching Practicum****Three Credits**

The course includes an internship in the field of sports in a club or community federation for children and youth. Emphasis is placed on planning the training sessions, organization of practices, and teaching technical skills and tactics, as well as the proper application of physical loads.

ING. JOSÉ DOMINGO PÉREZ SCHOOL OF ENGINEERING

OVERVIEW OF THE SCHOOL OF ENGINEERING

Recognizing the need for engineering professionals in Puerto Rico's accelerating economic environment, the AGMUS Board of Trustees approved in August 1990, the establishment of a School of Engineering at Universidad Ana G. Méndez-Recinto de Gurabo.

The School of Engineering started with an initial enrollment of 75 students in Academic Year (AY) 1990-91 and currently offers associate degrees in technology, baccalaureate programs in Mechanical Engineering, Electrical Engineering, Computer Engineering, Civil Engineering (as of 2013) and Industrial and Management Engineering, and a Master's degrees in Administration of Telecommunications and Network Systems and in Mechanical Engineering (with specializations in Alternative Energy and Aerospace Engineering), Computer Engineering, and Electrical Engineering.

Presently, the School has over 500 students in Associate Degree Programs, over 900 in Bachelor's Degree Programs and over 50 in Master's Programs.

The School is committed to the success of every student and pursues this goal by offering small classes taught by highly qualified faculty, a wide range of student services, modern facilities and equipment, and opportunities for undergraduates to participate in faculty-directed research, special design projects and industrial internships.

The School of Engineering is housed in the modern Sandia National Laboratories Engineering building, named in recognition of the support provided by the U.S. Department of Energy. This facility includes classrooms, instructional and research laboratories, offices for faculty and staff, meeting and conference rooms, a student study room, and offices for Student Association Chapters. It was occupied in August, 1992. The building was expanded in 1998 to house seven Electrical Engineering laboratories designed for instructional and research use. The building is equipped with 62,000 square feet including a 13,000 square foot expansion completed in 2009. In 2012, the main computer center of the SOE was remodeled to include four office spaces for tutoring as well as 50 new computers. In 2014 a new 1,800 ft² facility was built adjacent to the machine shop to provide premium spaces for student projects such as the SAE Minibaja, SAE Formula, and capstone projects. In addition,

construction started on a new 5,000 ft² civil engineering wing to accommodate its laboratories and classrooms.

The School of Engineering has four academic departments:

- Department of Mechanical Engineering
- Department of Electrical and Computer Engineering
- Department of Industrial and Management Engineering
- Department of Civil Engineering

The School of Engineering offers five baccalaureate programs:

- B.S. in Mechanical Engineering
- B.S. in Electrical Engineering
- B.S. in Industrial and Management Engineering
- B.S. in Computer Engineering
- B.S. in Civil Engineering

SPECIALIZED ACCREDITATIONS

Baccalaureate programs in Mechanical Engineering, Electrical Engineering, Computer Engineering, and Industrial and Management Engineering and Civil Engineering are accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

VISION

The vision of the School of Engineering is to become the school of choice for all students interested in a technology or engineering degree, and to be recognized for its excellence in teaching and research.

MISSION

To provide our students at all degree levels, associate, bachelor and graduate, with an excellent education that allows them to become competitive at a national level in their chosen field of expertise, and responsive to the needs of their communities.

To serve the community through scholarly activities at the pre-college and college levels, through research and development, and through programs that serve the needs of industry.

Technology Curriculum

The JDP School of Engineering offers academic programs leading to Certificate degrees in Electrical Technology and Renewable Energy, and Computer Technology and Networks, Associate degrees in Mechanical Engineering Technology, Electronic Engineering Technology, Quality Control Engineering Technology, Plastic Engineering Technology and Computer Technology and Networks. These curricula provide the student with the necessary skills in mathematics, science, and communications to pursue a technical career successfully.

The program curricula of the Engineering Technology have many aspects in common. The content of the first two semesters are one hundred percent similar. Students will find that both written and oral communication skills are emphasized in all programs.

The full-time associate degree students who follow the recommended course schedules can complete the computer technology or engineering technology curriculum in 4 semesters (2 years) Students of the certificate in Computer and Network Technology can complete their program in a period of eighteen months, while students of the Certificate Program in Electrical Technology and Renewable Energy will be able to do it in one-year. Program duration for part-time and transfer students will vary, based upon course load and previous course work.

Academic Advising

All technology students are referred to the Engineering Advising Office to assure proper course sequence with respect to Requisites. The Technology Advising Sheet (please refer to the end of the catalog for a copy) is used for this purpose. As a supplemental activity, all technology students are encouraged to visit the director of technology programs to discuss progress, academic goals, career goals and professional aspects of the technology programs.

Course Policy

Requisites

The JDP School of Engineering enforces the Requisites in its Certificate and Associate degrees curriculum. Students who register for a course for which they do not have the necessary Requisites will be dropped from the course before the end of the term, and will be assigned a grade of WA.

Graduating Student Profile

Students that complete any of the technology programs at the Universidad Ana G. Méndez-Recinto de Gurabo develop, as a minimum, the following characteristics:

- An ability to apply knowledge of mathematics, science, and technology
- An ability to repair systems, components, or processes to meet desired needs
- An ability to function in multidisciplinary teams
- An ability to analyze and interpret data
- An understanding of ethical responsibility
- An ability to communicate effectively
- A recognition of the need for, and an ability to engage in life-long learning
- A knowledge of contemporary issues
- An ability to use the techniques, skills, and modern tools necessary for technical practice

INSTITUTE OF ENGINEERING TECHNOLOGY

Nelson Martínez Ortiz, Director
MEME, Universidad Politécnica de Puerto Rico

The Institute of Technology is a division of the JDP School of Engineering (JDP SOE) and is supervised by the Dean of Engineering with the aid of a program director. In general, graduates from this program will have a theoretical and practical knowledge of the rapidly changing world of technology. The curriculum also provides for developing the student's knowledge and skills in data analysis, problem solving, computer applications and effective communication in English and Spanish. Graduates will also have the necessary educational background to continue studies towards an Associate or Bachelor's degree in a related engineering area.

FACULTY

Nelson Martínez / Instructor
MEME, Universidad Politécnica de Puerto Rico

Andrés Lorán / Assistant Professor
MS, Universidad Politécnica de Puerto Rico

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN ELECTRONIC ENGINEERING TECHNOLOGY

The program focuses on the major areas of computer, instrumentation and communication systems. Graduates will also have the necessary educational background to continue studies towards a Bachelor's Degree in Electrical Engineering.

Vision of the Electronic Engineering Technology Program

To become the number one choice for all motivated students who wish to pursue an electronic engineering technology education in Puerto Rico.

Mission of the Electronic Engineering Technology Program

To prepare electronic engineering technology graduates professionally, so that they will be capable of fulfilling the technological needs of society and excel in the installation, troubleshooting and maintenance of electronic systems.

Objectives of the Electronic Engineering Technology Program

1. To help fulfill the need for technicians in the field of electronic engineering.
2. To deliver instruction using current technology, the most modern equipment, test instruments and computers.
3. To ensure the intellectual development of students enrolled in the program.
4. To develop technicians capable of undertaking leadership roles in professional, civic and social environments.

ASSOCIATE DEGREE IN ELECTRONIC ENGINEERING TECHNOLOGY

Electives Courses 4

ASSOCIATE DEGREE IN QUALITY CONTROL ENGINEERING TECHNOLOGY

The program focuses on areas of quality assurance for industrial or service environments. Graduates will also have the necessary educational background to continue studies towards a Bachelor's Degree in Industrial and Management Engineering.

Vision of the Quality Control Engineering Technology Program

To become the number one choice for all motivated students who wish to pursue an education in the field of quality control engineering technology in Puerto Rico.

Mission of the Quality Control Engineering Technology Program

To prepare quality control engineering technology graduates professionally, so that they will be capable of fulfilling the technological needs of society and excel in the maintenance and improvement of quality systems.

Objectives of the Quality Control Engineering Technology Program

1. To deliver instruction using current technology, the most modern equipment, test instruments, and computers.
2. To help fulfill the need for technicians in the fields of quality assurance.
3. To ensure the intellectual development of students enrolled in the program.
4. To develop technicians capable of undertaking leadership roles in professional, civic and social environments.

ASSOCIATE DEGREE IN COMPUTER TECHNOLOGY & NETWORKS

The program focuses in areas of installation, estimating and maintenance of new and existing computerized systems and network infrastructure. Graduates will also have the necessary educational background to continue studies toward a Bachelor's Degree in Computer Engineering.

Vision of the Computer Technology and Networks Program

To become the first choice for all motivated students who wish to pursue an education in the field of Computer Technology and Networks in Puerto Rico.

Mission of the Computer Technology and Networks Program

To prepare computer technology and networks graduates professionally, so that they will be capable of fulfilling the technological needs of society and excel in the maintenance and improvement of computer systems.

Objectives of the Computer Technology and Networks Program

- To deliver instruction using current technology, the most modern equipment, test instruments and computers.
- To help fulfill the need for technicians in the fields of computer and network installation, maintenance and repair, particularly in the eastern and southeastern region of Puerto Rico.
- To ensure the intellectual development of students enrolled in the program.
- To develop technicians capable of undertaking leadership roles in professional, civic, and social environments.

ASSOCIATE DEGREE IN ELECTRICAL TECHNOLOGY AND RENEWABLE ENERGY

The program focuses on the major areas of Electrical Technology and Renewable Energy. Graduates will also have the necessary educational background to continue studies towards an Associate Degree in Electrical Technology and Renewable Energy.

Vision of the Electrical Technology and Renewable Energy Program

To become the number one choice for all motivated students who wish to pursue electrical technology and renewable energy education in Puerto Rico.

Mission of the Electrical Technology and Renewable Energy Program

To prepare electrical technology and renewable energy graduates professionally, so that they will be capable of fulfilling the technological needs of society and excel in the installation, troubleshooting and maintenance of electrical systems.

Objectives of the Certificate in Electrical Technology and Renewable Energy Program

- Help fulfill the need for technicians in the fields of Electrical Technology and Renewable Energy.
- Provide the knowledge and necessary skills required of the most recent electrical technology and renewable energy.
- Ensure the intellectual development of students enrolled in the program.
- Develop technicians capable of undertaking leadership roles in professional, civic, and social environments.

ACADEMIC ENGINEERING PROGRAMS

In a joint effort with its constituencies, each academic department has developed specific vision and mission statements, and educational objectives.

ENGINEERING CURRICULUM

The School of Engineering offers academic programs leading to Bachelor of Science degrees in Mechanical Engineering, Electrical Engineering, Computer Engineering, Industrial and Management Engineering, and Civil Engineering. Within these programs, students may select electives that will provide a concentration in a major area of their chosen field.

The curriculum in each of the School of Engineering's academic programs has been developed to achieve the School's mission and the objectives of the individual programs. These curricula provide the student with the necessary skills in mathematics, science, engineering analysis and design, professional practice, and communication to successfully pursue a career in engineering.

The program curricula have many aspects in common. The first four semesters, known as the Engineering Basic Course Module, are relatively similar. This approach permits all students to make a well-informed choice of major at the end of their second year. Engineering design skills, crucial for the professional practice of engineering, are integrated throughout all program curricula, beginning in the first semester and culminating in capstone design experiences. Students will also gain considerable experience in engineering computer applications as they progress through the curricula. They will find that communication skills, both written and oral, are emphasized in all programs.

All program curricula also share a common general studies (humanities, social sciences, and languages) component. The aim of these courses is to provide the student with a liberal arts preparation necessary to integrate their technical knowledge with their social and cultural environment. Particular emphasis is placed on communication skills. Given the international composition of the faculty, students should expect some courses to be taught entirely in English. Also, many engineering professors have an English language requirement for exams, written reports, and oral presentations.

Full-time students who follow the recommended course schedules can complete the engineering curriculum in 8 semesters (4 years). Program duration for part-time and

transfer students will vary, based upon course load and previous course work.

Upon the completion of any of the engineering programs, students will be prepared to take the national Fundamentals of Engineering examination, one of the requirements for qualification for the Professional Engineer's license and for membership in the *Colegio de Ingenieros y Agrimensores de Puerto Rico*. The School of Engineering strongly encourages its students to take the Fundamentals of Engineering examination, and assists them in this endeavor.

The School of Engineering reserves the right to make changes in course offerings, curricula, and other policies affecting its programs. In the specific case of a curriculum revision, current students will be moved horizontally to the new curriculum. Students will be required to take new courses at a level higher than that at which the student is currently enrolled but never courses at a level below. All current and former students enrolled in the School of Engineering are subject to these conditions.

ENGINEERING DESIGN

Each engineering program emphasizes the development of engineering design skills, crucial for engineering practice, especially in the local industrial environment. Beginning in their first semester, students will learn to devise individual components, systems, and processes while taking into account some "real-world" constraints, specifications, and requirements. Students will demonstrate their design abilities through a series of projects and open-ended problems of increasing sophistication and complexity, culminating in capstone design projects in their final semester. They will receive ample experience in communicating their designs graphically, in writing and through oral presentations, to other students, faculty, and practicing engineers.

The School of Engineering maintains modern computer-aided design software applications on its network of computers, rapid prototyping equipment, and a machine shop in support of these design activities.

RESEARCH

To enhance the students' educational experience and to ensure the continued professional development of the faculty, the School of Engineering encourages and supports faculty research activities in a variety of fields. Opportunities exist for students to participate in Undergraduate Research elective courses on a number of ongoing projects. In addition to gaining valuable experience and developing

crucial lifelong learning skills, students receive course credit for their efforts. Some of these research programs are funded by a number of federal, commonwealth, and private industrial sources.

Students and faculty may also participate in summer internship programs. Students gain valuable experience in a research and development environment and begin to develop the professional contacts that will assist them in their career development.

In addition, Universidad Ana G. Méndez-Recinto de Gurabo is a member of the Latin American and Caribbean Consortium of Engineering Institutions (LACCEI), which fosters partnerships among academia, industry, government and private organizations.

GRADUATING STUDENT PROFILE

Students that complete any of the engineering programs at Universidad Ana G. Méndez-Recinto de Gurabo develop, as a minimum, the following profile:

- An ability to apply knowledge of mathematics, science and engineering.
- An ability to design and conduct experiments, as well as to analyze and interpret data.
- An ability to design a system, component, or process to meet desired needs.
- An ability to function on multidisciplinary teams.
- An ability to identify, formulate, and solve engineering problems.
- An understanding of professional and ethical responsibility.
- An ability to communicate effectively.
- The broad education necessary to understand the impact of engineering solutions in a global and societal context.
- Recognition of the need for, and the ability to engage in life-long learning.
- Knowledge of contemporary issues.
- Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

APPLICATION PROCESS

The School of Engineering uses the same application procedure as Universidad Ana G. Méndez-Recinto de Gurabo.

$$\text{Index} = \frac{[(\text{Mathematics} + \text{English} + \text{Spanish}) \times 0.75] + [\text{GPA} \times (25)]}{16}$$

Admit to B.S. program if Index ≥ 75

For example, suppose a student has the following qualifications:

- GPA: 3.0
- CEEB Achievement Test Scores:
 - Mathematics: 600
 - English: 550
 - Spanish: 450

$$\text{Index} = \frac{[(600+550+450) \times 0.75] + [3.0 \times (25)]}{16}$$

$$\text{Index} = \frac{[1200] + [75]}{16}$$

$$\text{Index} = 79.7, \therefore \text{Admit to B.S. program since Index} \geq 75$$

Example:
How to calculate
the Index

ADMISSIONS POLICY

Freshman

While the actual procedure for admitting students to the Academic Engineering Programs depends on whether the applicant is a first-time freshman, a transfer student from another institution, or a UT student reclassified from another program, the fundamental criterion is the same: the applicant must demonstrate a sufficiently strong background in mathematics and English so as to have a reasonable chance of successfully completing an academic engineering program leading to a B.S. degree. The intention of this criterion is to be inclusive. The goal of the SOE admissions policy is to ultimately admit every student with a motivation to study engineering, if not immediately, then after successful completion of a set of basic mathematics and English courses. This criterion derives directly from the stated UT goals and mandates of the SOE to provide opportunities for professional engineering education to all interested students in Puerto Rico.

Applicants to academic engineering programs leading to B.S. degrees in Civil Engineering, Computer Engineering, Electrical Engineering, Industrial and Management Engineering, or Mechanical Engineering have to satisfy the following admission requirements:

A High School Grade Point Average (GPA) of not lower than 2.0/4.0.

Take the College Entrance Examination Board (CEEB) and, using the following formula with the Achievement scores of the CEEB, obtain an index of at least 75 and PEAU (Math) ≥ 550 :

Engineering students are placed in the appropriate mathematics, English, and Spanish courses according to their CEEB scores. Cut-off scores have been identified in each area; for example, students with a CEEB score of 700 or higher in mathematics may enroll directly in MATH 151 Pre-Calculus I. Similar cut-off scores exist for English and Spanish courses with several levels that determine the degree of development required by a student. However, students may opt to challenge the cut-off score in math, English and Spanish courses by taking placement exams offered by Universidad Ana G. Méndez-Recinto de Gurabo. If the challenge is successful, the student will be enrolled in the appropriate higher-level course. Scores from Advanced Placement CEEB exam results are respected by Universidad Ana G. Méndez-Recinto de Gurabo although in some cases the required cut-off score is 3.0 (of a maximum of 5.0).

Students not satisfying the requirements stated above are encouraged to enroll in the Associate Degree Programs.

Once they have achieved the necessary verbal, mathematics, or English language skills as required by the Academic Engineering Programs, the student may submit a request to the Engineering Advising Office for reclassification into the Engineering Academic Programs.

Reclassification of Students from the UTSOE Associate Degree Programs

Students currently enrolled in an associate degree program of the SOE Institute of Technology may seek reclassification into an engineering bachelor's degree program in one of the following two manners:

1. Complete the associate degree program and request graduation. In this case, the student will be able to transfer credits depending on the originating associate degree program and the baccalaureate program to which the student is seeking to reclassify.
2. Or, pass MATH 121 Intermediate Algebra or MATH 151 Pre-Calculus I with a grade of A or B *on first attempt*, and have a minimum cumulative GPA of 2.5/4.0 at the conclusion of that semester.

Reclassification of Students from Other UT Academic Programs

Students currently enrolled in other academic programs at UT, and seeking reclassification into one of the bachelor's degree engineering programs must meet the following requirements:

1. Have a cumulative GPA of not less than 2.5/4.0 at Universidad Ana G. Méndez-Recinto de Gurabo.
2. Pass MATH 151 Pre-Calculus I with a minimum grade of B.
3. Or, in the case of students reclassifying from the School of Business and Entrepreneurship, pass MATH 199 Quantitative Methods I and MATH 200 Quantitative Methods II with a minimum grade of B in each course. These two courses substitute MATH 152 Pre-Calculus II.

Transfer Students

The Director of the EAO, in coordination with the Associate Dean of the SOE, oversees the admission process of transfer students into the engineering degree programs. Only these two persons are authorized to evaluate candidates; this is done to guarantee consistency in the evaluation of course equivalencies for transfer credits. No other faculty member of the department, school, or university can officially grant transfer credits under any circumstances; however, faculty members may be consulted to recommend course equivalencies. The Associate Dean's approval is required in all evaluations. The standard practice is to validate credit for a course taken elsewhere if course content is equivalent to

at least 75% of the course in UT's engineering curricula. Only courses with a grade of C or better are considered for credit transfer.

General Admission Requirements for Transfer Students

For transfer students from ABET accredited engineering programs:

1. Have a minimum GPA of 2.0/4.0.
2. Be eligible to start in at least MATH 151 Pre-Calculus I, i.e., pass a course leading to MATH 151 with a minimum grade of B, or be able to place in MATH 151 by placement exam.

For transfer students from non-ABET accredited engineering programs:

1. Have a minimum GPA of 2.5/4.0.
2. Be eligible to start in at least MATH 151 Pre-Calculus I, i.e., pass a course leading to MATH 151 with a minimum grade of B, or be able to place in MATH 151 by placement exam.

General guidelines for transfer of courses are as follows:

General Education, Math, and Science Courses

Most transfer students enter at the freshman or sophomore level. In such cases, the EAO is primarily concerned with the evaluation of general education, math, and science courses. Equivalencies for courses under this category will be granted as long as the School/ College/University is recognized and accredited by the appropriate governing bodies and the course descriptions, including prerequisites, agree with those of the Universidad Ana G. Méndez-Recinto de Gurabo undergraduate catalog. The student must submit a catalog (or photocopies) with the course descriptions to the EAO. Life experience credits are not accepted under any circumstances.

Engineering Science Courses

The EAO is also especially concerned with the first few engineering science courses that are common to all UT's engineering curricula. These include FSEN 105 (Introduction to Engineering), ENGI 122 (Introduction to Computer Programming), and ELEN 301 (Electrical Networks I). Courses from ABET accredited programs are easily transferable. Nevertheless, course descriptions are necessary to assure equivalency. Courses from non-ABET accredited programs (including foreign institutions) are accepted as long as the School/College/University is recognized and accredited by the appropriate governing bodies and the course descriptions, including prerequisites, agree with those of the Universidad Ana G. Méndez-Recinto de Gurabo undergraduate catalog. The student must submit a catalog (or photocopies) with the course descriptions to the EAO. Life experience credits are not accepted under any circumstances.

Engineering science courses of a level higher than those listed above follow the same procedure; however, it may become necessary for the EAO to consult with a cognizant faculty member to determine equivalency. The student may also be required to submit a copy of the syllabus and the textbook if the course description is insufficient to determine equivalency.

Engineering Elective Courses

Engineering electives are not transferable.

Engineering Design Courses

An engineering design course is defined for the purpose of this section as a high-level design course typical of the last two or three semesters that culminate the curriculum. These courses are not transferable.

Students must also follow the residence requirements which stipulate that transfer students must earn at least the last thirty (30) credit hours of a bachelor's degree and the last twelve (12) credit hours of their major from the School of Engineering.

General procedure

The student supplies a copy of their transcript and course descriptions to the EAO for an initial advising session. The EAO will direct the student to the Associate Dean who checks the student's records to ensure that the student is in the proper major and eligible for the program. Students on academic probation at other institutions will not be considered. During the session, the Associate Dean fills and discusses an advising sheet with the student. The Associate Dean explains which courses may be transferred, which courses could not be accepted and why, and identifies which courses are needed to fulfill the degree requirements. An extra copy of the advising sheet is given to the student. To complete the transfer process, the student must also request official transcripts from the institution and fill in the application for admission form. This advising session is a service provided free of cost to the student. A candidate may opt to skip this advising session and apply to the program by completing the application for admission and submitting it by mail. After evaluation and approval by the Associate Dean of Engineering, the transfer process culminates with the approval of the Admissions Director.

Graduation Requirements

Completion of the courses required for the degree as set by UT, with a minimum cumulative GPA of 2.00/4.00 and a minimum GPA in the major of 2.30/4.00.

See the established university policy.

Prerequisites

The School of Engineering enforces the prerequisites in its engineering curriculum. The software used for registration automatically checks prerequisites and will not allow a student to register a course for which the prerequisites are not met.

Academic Advising

All engineering students are referred to the Engineering Advising Office to ensure proper course sequencing with respect to prerequisites. An Engineering Advising Sheet is used for this purpose. As a supplemental activity, all engineering students are encouraged to visit faculty members during office hours (or ask for an appointment) to discuss progress, academic goals, career goals, and professional aspects of the engineering profession.

PROFESSIONAL SOCIETIES

Engineering students are strongly encouraged to become student-members of professional societies and to continue membership after graduation to facilitate the process of life-long learning.

ELECTRICAL AND COMPUTER ENGINEERING DEPARTMENT

Dr. José L. Colón, Department Head

The Electrical and Computer Engineering department offers two programs at the bachelor's degree level, one in electrical engineering and the other in computer engineering. Each program is described separately. The two programs share the same faculty and same technical staff, as follows:

ELECTRICAL AND COMPUTER ENGINEERING FACULTY

Alcides Alvear / Associate Professor
M.S., Universidad de Puerto Rico

Idalides J. Vergara-Laurens / Associate Professor
Ph.D., University of South Florida

Jeffrey L. Duffany / Professor
Ph.D., Stevens Institute of Technology

José Almodóvar / Associate Professor
Ph.D., University of Florida

José L. Colón / Professor
Electrical and Computer Eng. Department Head
D. Eng., Rensselaer Polytechnic Institute

Mark A. Lau / Professor
Ph.D., University of Colorado at Boulder

Miguel Goenaga / Associate Professor
Ph.D., Universidad de Puerto Rico

Rafael Rivera / Assistant Professor
Ph.D., San Pablo, CEU, Madrid, Spain

Roberto Callarotti / Professor
Ph.D., Massachusetts Institute of Technology

Wilma Pabón / Assistant Professor
M.S., Universidad de Puerto Rico

Yahya M. Masalmah / Professor
Ph.D., Universidad de Puerto Rico

ELECTRICAL AND COMPUTER ENGINEERING TECHNICAL STAFF

Jorge Gaudier / Electrical Engineering Lab. Coordinator
M.S., University of Missouri at Columbia

Noemí Camacho / Computer Center Coordinator
B.B.A., Universidad del Turabo

COMPUTER ENGINEERING PROGRAM

Engineering
Accreditation
Commission

The Computer Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

In an increasingly complex world computers are at the forefront of the most amazing technological developments. With in view of this such a vast spectrum of applications ranging from the Internet to electronic portable devices to robotics to video games, the Computer Engineering Program provides the student with a rigorous academic preparation for a rich and rewarding career. Students will learn the principles of hardware and software design and their interface to build complex computer systems for industrial applications.

VISION

To become the first choice for all motivated students who wish to pursue a computer engineering education in Puerto Rico.

MISSION

To professionally prepare computer engineering students who, as graduates, are capable of fulfilling the technological needs of society.

EDUCATIONAL OBJECTIVES OF THE COMPUTER ENGINEERING PROGRAM

(broad statements that describe the career and professional accomplishments that the program is preparing graduates to achieve)

1. To apply the principles of the profession or gain entrance to a graduate program in computer engineering or related disciplines.
2. To become leaders in their profession by assuming increasing responsibility within their organizations, serving as role models for their peers, and being effective change agents for the benefit of the organizations that they represent.

3. To demonstrate attainment of professional and technical maturity.

The Faculty of the Electrical and Computer Engineering Department, through a set of measurable outcomes, and with the participation of students and an Industrial Advisory Board, systematically measures the effectiveness of the program in satisfying its educational objectives and continuously strives to improve the program.

OUTCOMES FOR COMPUTER ENGINEERING PROGRAM

(What students should know and should be able to do by the time of graduation)

- a. An ability to apply knowledge of mathematics, science, and engineering.
- b. An ability to design and conduct experiments as well as to analyze and interpret data.
- c. An ability to design a system, component, or process to meet desired needs.
- d. An ability to function in multidisciplinary teams.
- e. An ability to identify, formulate, and solve engineering problems.
- f. An understanding of professional and ethical responsibility.
- g. An ability to communicate effectively.
- h. The broad education necessary to understand the impact of engineering solutions in a global and societal context.
- i. A recognition of the need for, and an ability to engage in, lifelong learning.
- j. A knowledge of contemporary issues.
- k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- l. Knowledge of probability and statistics, including appropriate computer engineering applications.
- m. Knowledge of advanced mathematics, including differential equations, linear algebra, complex variables, and discrete mathematics.
- n. An ability to analyze and design complex electrical and electronic devices, software, and systems containing hardware and software components.

ELECTRICAL ENGINEERING PROGRAM

Engineering
Accreditation
Commission

The Electrical Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

The conveniences that we enjoy today are made possible by the effective utilization of electrical energy. This form of energy has enabled a wide spectrum of technologies ranging from computers to robotics to industrial automation to medical imaging to wireless communication. The standard of living of any country is judged by the consumption of electrical energy per capita. The Electrical Engineering Program offers the student an exciting curriculum covering diverse areas including power, electronics, computers, controls, communications, and signal processing. Students will be well prepared to tackle problems in these areas and become agents of innovation in an increasingly complex world. In circuits and electronics, students are introduced to energy sources, circuit elements, and devices that are encountered in practical electrical networks. In power systems, students are given the background to understand the generation, transmission, and distribution of electric power. In computers, students learn the principles under which computers are built and communicate among themselves; students also learn how to design software for applications such as the Internet. In control systems, students are introduced to the design techniques for the automatic monitoring of industrial processes. In communications and signal processing, students learn the modulation techniques used in analog and digital communication systems, and filter design for processing images and acoustic signals.

VISION

To become the first choice for all motivated students who wish to pursue an electrical engineering education in Puerto Rico.

MISSION

To professionally prepare electrical engineering students who, as graduates, are capable of fulfilling the technological needs of society.

EDUCATIONAL OBJECTIVES

(broad statements that describe the career and professional accomplishments that the program is preparing graduates to achieve)

1. To apply the principles of the profession or gain entrance to a graduate program in electrical engineering or related disciplines.
2. To become leaders in their profession by assuming increasing responsibility within their organizations, serving as role models for their peers, and being effective change agents for the benefit of the organizations that they represent.
3. To demonstrate attainment of professional and technical maturity.

The Faculty of the Electrical and Computer Engineering Department, through the following set of measurable outcomes, and with the participation of its constituents, systematically measures the effectiveness of the program in satisfying its educational objectives and continuously strives to improve the program

OUTCOMES

(What students should know and should be able to do by the time of graduation)

- a. An ability to apply knowledge of mathematics, science, and engineering.
- b. An ability to design and conduct experiments as well as to analyze and interpret data.

INDUSTRIAL AND MANAGEMENT ENGINEERING PROGRAM

Dr. Oscar A. Sáenz, Department Head

Engineering
Accreditation
Commission

The Industrial and Management Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

Industrial and Management Engineering encompasses activities in quality, production, operations research, simulation, facilities layout, work system design, work measurement, project management, safety and ergonomics, economic and cost analysis. An industrial and management engineering graduate acquires the capacity to design, develop, implement, and improve integrated systems that include people, materials, information, equipment, technology and energy. This engineer applies knowledge from mathematics, science, computers, accounting, algorithms and graphics to solve problems involving efficiency, effectiveness or productivity. In terms of Management, a graduate of this program develops an understanding of the engineering relationships between the management tasks of planning, organizing, leading, controlling, and the human element in production and service organizations. Essential professional skills, such as communication, teamwork and interpersonal relations are practiced throughout this program.

VISION

To become the first choice for all motivated students who wish to pursue an Industrial and Management Engineering education.

MISSION

To professionally prepare Industrial and Management Engineering students who, as graduates, are capable of fulfilling the technological needs of society.

EDUCATIONAL OBJECTIVES

(broad statements that describe the career and professional accomplishments that the program is preparing graduates to achieve)

The IME program is committed to provide our graduates with the technical and professional skills necessary to solve contemporary challenges in industrial and management engineering. The first goal of the IME program is that, within the first years after graduation, our graduates will successfully engage technical problems in areas such as Quality, Design of Experiments, Simulation, Work Systems Design, Facilities and Production Planning, as well as working in teams, manage or participate in projects, and contribute to decision-making towards enterprise improvement and greater efficiency. The second goal of the IME program is that, progressively over time, our graduates will be able to assume greater technical and administrative responsibilities, manage projects, and assume more complex leadership roles in their enterprises.

Building upon the above-mentioned two general goals, the IME Program has three educational objectives, which the IME Department assesses periodically to measure the degree to which alumni achieve them.

Within four years following graduation:

Objective 1: graduates will gain technical and professional experience in IME, or allied disciplines, via successful employment, self-employment, or pursue graduate studies.

Objective 2: graduates will perform IME related functions, improve, design, redesign, or manage enterprises (i.e., products, activities, business processes in industrial or service settings) with a systems perspective.

Five years after graduation and beyond, and by further developing their engineering and management skills, IME graduates

Objective 3: graduates will advance in their professional careers and progressively assume greater leadership, technical, or managerial roles in their organizations.

The Faculty of the Industrial and Management Engineering Department, through the following set of measurable outcomes, and with the input of its constituents, systematically measures the effectiveness of the program and continuously strives to improve the program.

OUTCOMES

(What students should know and should be able to do by the time of graduation)

Engineering programs must demonstrate that their graduates have:

- a. An ability to apply knowledge of mathematics, science and engineering.

- b. An ability to design and conduct experiments, as well as to analyze and interpret data.
- c. An ability to design a system, component, or process to meet desired needs.
- d. An ability to function on multi-disciplinary teams.
- e. An ability to identify, formulate, and solve engineering problems.
- f. An understanding of professional and ethical responsibility.
- g. An ability to communicate effectively.
- h. The broad education necessary to understand the impact of engineering solutions in a global and societal context.
- i. A recognition of the need for, and an ability to engage in life-long learning.
- j. A knowledge of contemporary issues.
- k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- l. The ability to design, develop, implement, and improve integrated systems that include people, materials, information, equipment and energy.
- m. Accomplish integration of systems using appropriate analytical, computational, and experimental practices.
- n. An understanding of the engineering relationships between the management tasks of planning, organization, leadership, control, and the human element in production, research, and service organizations.
- o. An understanding of and dealing with the stochastic nature of management systems.
- p. The capability of demonstrating the integration of management systems into a series of different technological environments.

MECHANICAL ENGINEERING PROGRAM

Dr. Juan C. Morales, P.E., Department Head

Engineering
Accreditation
Commission

The Mechanical Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

WHAT IS A MECHANICAL ENGINEER?

Mechanical engineers apply physical principles in the creation of useful devices, objects and machines. They design and develop everything that you may think of as a machine: from supersonic jets, to automobiles, to bicycles to toasters. The designs are analyzed using mathematics and physical principles of motion, energy, and force to ensure that the product functions reliably. In many cases the analyses are performed using impressive and exciting state of the art computer aided design (CAD) software. Mechanical engineers also strive to create designs that can be manufactured at a competitive cost. Maintenance of the product after design and fabrication is also of concern to mechanical engineers. Practically every product or service in modern life has been touched in some way by a mechanical engineer. This makes mechanical engineering one of the oldest, one of the broadest, and one of the most exciting engineering disciplines.

The two main subdivisions within mechanical engineering are **mechanical systems** and **thermal/fluid systems**.

- In the area of **mechanical systems**, mechanical engineers design the solid components of a system. Knowledge of materials and manufacturing processes is required. Typical applications include:
 - ✓ The suspension and steering systems of a car.
 - ✓ The pistons, the rods, the crankshaft, and other solid components of an engine.
 - ✓ The landing gear of aircraft and other complex aerospace components.
 - ✓ All kinds of machinery such as cranes, lathes, and ski lifts, to name a few.

- ✓ All the mechanisms and other solid components of household items such as washing machines, dryers, refrigerators, and automatic gate openers.
- In the area of **thermal/fluid systems**, mechanical engineers utilize heat and fluid energy to convert it into useful work to satisfy a particular need. Typical applications include:
 - ✓ The design of water distribution systems inside buildings including the fluid mechanics calculations to determine the required capacity of the pumps, and the required pipe diameters.
 - ✓ The design of heating, ventilation and air conditioning systems (HVAC) that maintain a comfortable state inside enclosed areas and, in some cases, such as hospitals and pharmaceutical facilities, maintain strict parameters of cleanliness.
 - ✓ The design of steam turbines and boilers used in the power industry to generate electricity including the calculations based on the Rankine cycle, one of the most used thermodynamic power cycles.
 - ✓ The design of gas turbines used for jet propulsion as well as in the power industry (coupled to an electric generator) to generate electricity. These require an understanding of the thermodynamic combustion process, the aerodynamics of turbine blades, and basic concepts of electrical networks.
 - ✓ The design of heat exchangers that extract heat energy from nuclear reactors.

Most mechanical engineering systems require the integration of **mechanical systems** and **thermal/fluid systems**; however, in most cases, mechanical engineers specialize in only one area. For this reason, a group is usually required to incorporate all areas. In the PE Exam, an eight-hour exam required for licensure, the exam taker must choose one of the three different modules in the afternoon (in-depth) portion of the exam: HVAC, Thermal and Fluid Systems, and Machine Design. However, the exam taker must demonstrate competency in all areas in the morning (breadth) portion of the PE Exam.

WHAT ARE YOUR CAREER OPTIONS AFTER GRADUATION?

There are many career options that you may explore after graduation. Some professionals elect to stay in the same place their entire lives. Others like to change periodically. As you will see, the Mechanical Engineering degree gives you a very high degree of mobility. Some of your options after graduation are:

US Government and the Military

With the baby boomer generation retiring, there are literally thousands of engineering jobs that have to be filled in the US Government and the Military. Many of our graduates have elected this option and are happily settled in the mainland USA working as engineers.

Graduate School

Are you still thirsty for more knowledge? Do you enjoy research? If that is the case then graduate school may be your best option. Many ME graduates from Turabo have continued studies in universities in Puerto Rico and the mainland USA, including UPR, Cornell, Stanford, Georgia Tech, Purdue, RPI, and Michigan Tech, among others. If you earn a Teaching Assistantship while pursuing a Master's degree and you discover that you like teaching, then a good decision may be for you to continue studying towards a PhD degree and enter academia as an engineering professor.

Research Labs

There are several Research Laboratories in the mainland USA. Some are government owned while others are private research centers searching for profitable future innovations. The Sandia National Laboratory, a government laboratory after which the main building of this School is named, employs several of our graduates, all of which have continued their graduate studies and earned MS degrees.

Preparation for other Professions such as Law, Medicine, Business

The expertise in problem-solving that you achieve in the Mechanical Engineering curriculum will serve you well for exploring any other profession. Many patent lawyers have a mechanical engineering degree that serves them well to better understand inventions. Many dentists involved in research have mechanical engineering degrees which assist them in designing and fabricating specialized machines and mechanisms for their research. Many high-level managers with MBA's start out with an engineering degree.

VISION

To become the number one choice for all motivated students who wish to pursue a mechanical engineering education in Puerto Rico.

MISSION

To professionally prepare mechanical engineering graduates who are capable of fulfilling the technological needs of society and excel in the design and realization of mechanical and thermal systems.

GOALS

1. To provide a thorough education in the fundamentals of mechanical engineering, including thermal, fluid, and mechanical systems, in order to sustain an excellent and accredited undergraduate program with the following expectations for our students, within a few years after graduation:
 - to be gainfully employed in mechanical engineering (or related disciplines) or to be in good academic standing in a program of graduate studies in a variety of fields, including mechanical engineering;
 - to be engaged in activities that promote their professional development;
 - to participate in organizations that serve their profession.

Goal 1 represents the Program Educational Objectives as defined by ABET, that is, "broad statements that describe what graduates are expected to attain within a few years of graduation. Program educational objectives are based on the needs of the program's constituencies."

Goals 2 through 6 of the Mechanical Engineering program are not Program Educational Objectives as defined by ABET but rather general goals that set the direction for the ME department; these are:

2. To search for, develop, and use the most effective teaching/learning methodologies that deliver graduates with the attitude and ability to apply practical knowledge in the workplace.
3. To promote scholarly research activities between students and faculty, and to gradually transition from a teaching program, to a teaching-and-research program.
4. To encourage enrichment of the educational experience through participation in student chapters of professional societies, special student projects, and industry internships.
5. To review, assess and improve the program on a continuous basis.

OUTCOMES

(What students should know and should be able to do by the time of graduation. The program outcomes are covered through coursework. Each course in the curriculum addresses at least one of the outcomes listed below.)

- a. An ability to apply knowledge of mathematics, science and engineering.
- b. An ability to design and conduct experiments, as well as to analyze and interpret data.
- c. An ability to design a system, components or processes to meet desired needs.
- d. An ability to function on a multidisciplinary team.
- e. An ability to identify, formulate, and solve engineering problems.
- f. An understanding of professional and ethical responsibility.
- g. An ability to communicate effectively.
- h. A broad education necessary to understand the impact of engineering solutions in a global and societal context.
- i. A recognition of the need for, and an ability to engage in life-long learning.
- j. A knowledge of contemporary issues.
- k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- l. An ability to work professionally in both thermal and mechanical systems areas including the design and realization of such systems.

CIVIL ENGINEERING PROGRAM

Engineering
Accreditation
Commission

The Mechanical Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

Dr. Nelson R. Gómez-Torres, EIT, Department Head

Most of the infrastructure surrounding you is provided by the work performed by civil engineers. All the buildings, highways, bridges, drainages, channels, water and wastewater systems are designed, built, maintained and improved by civil engineers. Civil engineers use science and mathematics to solve engineering problems in several areas such as: Structural, Geotechnical, Transportation and Environmental Engineering, as well as, Water, Wastewater and Construction Management.

PROGRAM EDUCATIONAL OBJECTIVES

A few years after graduation, our civil engineering graduates will be able to:

1. Undertake civil engineering design projects giving due consideration to different alternatives, their safety, sustainability and costs, and the needs of stakeholders, while complying with ethical standards in such a way that they become honorable members of our profession.
2. Share, their ideas clearly and thoughtfully with supervisors, associates, clients and the general public, thus demonstrating their expertise verbally and in writing, in both English and Spanish.
3. Recognize the limits of their knowledge, and have the tools and motivation to continue their professional development.

STUDENT OUTCOMES

Student outcomes describe what students are expected to know and be able to do by the time of graduation. These relate to the knowledge, skills, and behaviors that students acquire as they progress through the program. The civil engineering program has decided to adopt the student outcomes from ABET. The student outcomes of the program are:

1. an ability to apply knowledge of mathematics, science, and engineering
2. an ability to design and conduct experiments, as well as to analyze and interpret data
3. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
4. an ability to function on multidisciplinary teams
5. an ability to identify, formulate, and solve engineering problems
6. an understanding of professional and ethical responsibility
7. an ability to communicate effectively
8. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
9. a recognition of the need for, and an ability to engage in life-long learning
10. a knowledge of contemporary issues
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

CIVIL ENGINEERING CURRICULUM

A credits curriculum has been developed to prepare students in the field of Civil Engineering. Courses in civil engineering are incorporated in the curriculum, supported by courses that offer the appropriate background in social and human sciences, Spanish and English languages, mathematics,

chemistry, physics, and engineering science. The 132 credits civil engineering program is explicitly described in the next page.

¹Students pursuing the minor in Entrepreneurship and Innovation must take at least one course of the minor sequence outside the School of Engineering as a free elective course.

COURSE DESCRIPTIONS

CIEN 410

Principles of Surveying

Two Credits

Two hours of lecture per week. Basic concepts of surveying such as units of measurement, vertical and horizontal distance, and angle measurement. Surveying application topics include Control Surveys, Topographic Surveys, Global Positioning Systems and Geographic Information Systems.

CIEN 420

Civil Engineering Materials

Two Credits

Two hours of lecture per week. Analysis of mechanical and non-mechanical properties of civil engineering materials. Description of the production process of steel, aluminum, asphalt, composites and Portland cement.

CIEN 420L

Civil Engineering Materials Laboratory

One Credit

Three hours of laboratory work per week. Laboratory testing of mechanical and non-mechanical and non-mechanical properties of civil engineering materials.

CIEN 430

Structural Analysis I

Three Credits

Three hours of lecture per week. Classification of design loads. Analysis and calculation of reactions, internal forces and deflections of statically determinate and indeterminate beams, frames and trusses. Construct influence lines for statically determinate structures.

CIEN 431

Structural Analysis II

Three Credits

Three hours of lecture per week. Analysis of statically indeterminate beams, frames and trusses using the displacement method. Fundamental concepts of the stiffness method for structural analysis.

CIEN 432

Reinforced Concrete Design

Three Credits

Three hours of lecture per week. Analysis of reinforced concrete members subject to flexure, axial and shear loads. Topics include design of slabs, beams, columns and spread footings based on the strength design method.

CIEN 434

Structural Steel Design

Three Credits

Three hours of lecture per week. Behavior and design of structural steel members including tension members, welds, laterally supported and continuous beams, columns, and connections based on the Load and Resistance Factor Design method.

CIEN 436

Design of Wood Structures

Three Credits

Three hours of lecture per week. Analysis and design of wood structures. Topics include design of beams, columns, roof diaphragms, shear walls and connections.

CIEN 440

Introduction to Geotechnical Engineering

Two Credits

Two hours of lecture per week. Engineering properties of soils including their descriptions and classifications, the effects of water, soil strength and compressibility. Consolidation, permeability and seepage characteristics of soils.

CIEN 440L

Introduction to Geotechnical Engineering

Laboratory

One Credit

Three hours of laboratory per week. Laboratory methods to determine engineering properties of soils. Laboratory tests will be conducted to obtain index and mechanical properties such as water content, specific gravity, grain size distribution, permeability, rate of volume change and strength.

CIEN 444

Foundation Engineering

Three Credits

Three hours of lecture per week. Analysis and design of foundations for engineering structures and the evaluation of subsoil conditions as they affect their behavior, proportions, and choice of type of said foundation.

CIEN 450

Hydrology and Hydraulics

Three Credits

Three hours of lecture per week. Fundamental principles of fluid mechanics, and their application to the hydrologic flow components and to the operation of pipeline, pump, and open channel hydraulic systems.

CIEN 460**Introduction to Environmental Engineering****Two Credits**

Two hours of lecture per week. Fundamental concepts in environmental engineering concerning global warming, sustainability, water quality and treatment, wastewater treatment, air pollution, solid-waste management, and green engineering.

CIEN 460L**Introduction to Environmental Engineering****Laboratory****One Credit**

Three hours of laboratory per week. Laboratory methods and interpretation of results for chemical and biological analyses of water and wastewater. Testing procedures such as solids determination, measurement of chemical oxygen demand and dissolved oxygen, chloride concentration, and chlorine demand will be conducted to determine water quality.

CIEN 465**Water and Wastewater Engineering****Three Credits**

Three hours of lecture per week. Water and wastewater treatment systems and their design. Analysis and design of water transmission, distribution and collection systems. Study of the physical, chemical and biological principles related to water and wastewater treatments.

CIEN 470**Construction Project Management****Three Credits**

Three hours of lecture per week. Construction management tasks such as project documentation, job scheduling, cost estimating, quality control, and safety management.

CIEN 474**Construction Cost Estimates****Three Credits**

Three hours of lecture per week. Principles and techniques of estimating construction costs, with emphasis on quantity take-off and pricing elements of work.

CIEN 480**Transportation and Traffic Engineering****Three Credits**

Three hours of lecture per week. Fundamental principles of traffic flow, operations, and controls. Capacity analysis and level of service evaluation of highways.

CIEN 484**Highway Engineering****Three Credits**

Three hours of lecture per week. Geometric design of highways. Analysis, behavior, performance, and structural design of pavements for highways.

CIEN 490**Civil Engineering Design Project****Three Credits**

Three hours of lecture per week. Design of a project that integrates technical areas of the civil engineering profession. Development of design alternatives, including computational methodology, plans, cost estimates, and specifications.

CTEC 200**Computers & Peripherals Installation, Maintenance, and Support****Four Credits**

Three lecture hours and one three-hour lab per week. This course covers all components and ancillary systems comprising a PC. It provides an introduction to every component and analyzes its functionalities and weaknesses. It analyzes the role of each component in supporting an application and the user functional goal. It presents the PC as a package of matched components and dissects all of its internals individually and integrally. Some of the components covered are the CPU, RAM, display apparatus, ROM, fixed disk, USB, network adapter, CD-ROM, CDRs, DVDs, floppy disk, serial and parallel ports, mouse, keyboard and others. The course also covers the most critical peripherals such as printers, scanners, digital imagery equipment, modems, and others.

CTEC 205**Computers, Peripherals and Operating Systems****Three Credits**

Two lecture hours and one three –hours lab per week. This course covers all components and ancillary systems comprising a personal computer. It provides an introduction to every component and analyses its functionalities and weaknesses. It presents the PC as a package of matched components and dissects all of its internals individually and integrally. Also this course covers all software components comprising a PC. It analyses the role of each component in supporting an application and the user functional goal. Some of the software components are the operating system and its subcomponents. It covers software problems in detail.

CTEC 210
Operating Systems, Installation & Configuration
Four Credits

Three hours of lecture and one three-hour lab per week. This course covers all software components comprising a PC. It provides an introduction to every component and analyzes its functionalities and weaknesses. It analyzes the role of each component in supporting an application and the user functional goal. It presents the PC as a package of matched components and dissects all of its internals individually and integrally. Some of the software components are the operating system and its sub-components, data communications software components, DOS components, peripheral administration components, Windows Systems architecture, disk operating software, essential user applications, memory management software, software upgrades management. It covers the diagnosis, procedures and resolution of software problems in detail. It also deals with virus problems and the most effective software solutions. Finally, it covers networking from a software perspective.

CTEC 220
Fundamentals of Computers, Peripherals and Operating Systems
Three Credits

This course covers all components and ancillary systems comprising a personal computer. It provides an introduction to every component and analyses its functionalities and weaknesses. It presents the PC as a package of matched components and dissects all of its internals individually and integrally. Also this course covers all software components comprising a PC. It analyses the role of each component in supporting an application and the user functional goal. Some of the software components are the operating system and its subcomponents. It covers in detail software problems in detail.

CTEC 220L
Laboratory of Fundamentals of Computers, Peripherals and Operating Systems
Three Credits

This laboratory course provides students with theoretical concepts and practical skills in using personal computers and peripherals. It discusses the concepts of "motherboard", input and output ports, power supplier, update, and preventive maintenance, among others. The issues are addressed to the operating principles, selection and specifications for personal computers. This course also prepares students to take the certification exam for personal computers "A +".

CTEC 222
Principles of Computers, Peripherals and Operating Systems
Three Credits

This course covers all components and ancillary systems comprising a personal computer. It provides an introduction to every component and analyses its functionalities and weaknesses. It presents the PC as a package of matched components and dissects all of its internals individually and integrally. This course also covers all software components comprising a PC. It analyses the role of each component in supporting an application and the user functional goal. Some of the software components are the operating system and its subcomponents. It covers software problems in detail.

CTEC 310
Data Communications and Networks
Four Credits

Three hours of lecture and one 3-hour lab per week. Basic principles involved in the design and implementation of data networks. The course covers the historical evolution of distributed computing, which has taken place as a result of advancing technologies. It identifies the types of communications networks that have evolved, based on the various technological configurations. The different electrical characteristics of data transmission are also covered, along with the basic laws and theories that determine their use. The various techniques that enable the receiving of data and bit error protocols are discussed in detail, along with the techniques to control transmission errors and flow. Standard data links and encryption protocols are also covered as well as the concepts of "computer communities". Finally, the protocols for the implementation of Data Communications are presented.

CTEC 320
Introduction to Programming with C++
Four Credits

Five hours of lecture and laboratory per week. This course will develop students' theoretical knowledge and the necessary technical skills in the use and handling of the programming in C++ language. It includes the analysis of the basic elements of programming, such as: solving problems, algorithms and development of a flowchart. Variables, structures, functions, arrangements and sequences will also be discussed.

COMP 311
Discrete Mathematics for Engineers
Three Credits

Three hours of lecture per week. This is an introductory course in discrete mathematics. It covers fundamentals of logic, proofs, set theory, number theory, finite state

machines, computational complexity, recurrence relations, discrete probability, and graph theory with an emphasis on engineering applications.

COMP 315

Analysis and Design of Data Structures and Algorithms

Three Credits

Three hours of lecture/laboratory per week. This course is an introduction to two fundamental topics in computer engineering: data structures and algorithm design. Topics include design of efficient algorithms, abstract data types such as linked lists, queues, stacks, binary trees, complexity analysis, sorting, searching, and recursive algorithm.

COMP 411

Numerical Methods with Programming

Three Credits

Three hours of lecture per week. This course targets students who have working knowledge in one or more programming languages such as C, C++, and Java, or computational tools such as Matlab. This course introduces algorithm development to solve mathematical problems such as root finding, interpolation and approximation, integration, solution to initial value problems (IVP) arising from first- and second-order ordinary differential equations (ODE), and direct and iterative methods for solving systems of linear equations.

CPEN 358

Object-Oriented Programming

Three Credits

Three hours of lecture/laboratory per week. Introduction to object-oriented programming and design using JAVA. Techniques for object-oriented programming including Java classes, inheritance, composition, virtual functions and polymorphism, stream input/output, templates, and exception handling are presented.

CPEN 425

Software Engineering

Three Credits

Three hours of lecture per week. This course covers the techniques used during the software development cycle: specification, design, testing, documentation, and maintenance. Software and hardware integration is also discussed. The course requires the design, implementation, and management of a software engineering project.

CPEN 444

Computer Architecture and Organization

Three Credits

Three hours of lecture per week. Survey of the basic concepts of computer design. Information representation, instruction sets, addressing modes, arithmetic/logic units, floating point units, control units, microprogramming, hardwired control, memory hierarchy, caches, associative memory, memory management, input-output, DMA, interrupts, system organization, CISC, RISC, super scalar machines, special purpose machines, and multiprocessing.

CPEN 452

Operating Systems

Three Credits

Three hours of lecture/laboratory per week. Introduction to basic operating systems concepts, UNIX operating system, process management, communication and scheduling; I/O devices, drivers, interrupts handlers, and deadlock; memory management, swapping and virtual memory; file systems, security, and protection mechanisms.

CPEN 455

Introduction to Databases

Three Credits

Three hours of lecture/laboratory per week. This is an introductory course in database management systems with emphasis on relational database design and applications development. Topics include entity-relationship model, relational model, object-oriented model and object-relational model; database design techniques such as E-R modeling, E-R to relational mappings, functional, and normalization; structured query language (SQL); applications servers and DBMS; transaction processing and database recovery; DBMS implementation techniques such as storage management, indexing, and access methods, query evaluation, and optimization.

CPEN 456

Database Management Systems

Three Credits

Three hours of lecture per week. This course introduces some techniques for traditional building of relational database management systems (DBMS). The course focuses on design, implementation, performance, and reliability considerations for DBMS. It emphasizes database engine architecture, disk storage organization, buffer management, B+-trees indexing, hash-based indexing, traditional joint algorithms, two-phase locking and concurrency, write-ahead logging, query optimization, database benchmarking, object-oriented databases, data warehousing, and data mining.

CPEN 457**Programming Languages****Three Credits**

Three hours of lecture per week. Comparative study of programming paradigms including imperative, object-oriented, functional, logic, and concurrent programming with focus on main features produced by different languages for specific applications. Topics include formal specification of the syntactic structure of a language, context-free grammars, parsing, and principles of language design.

CPEN 458**Introduction to Compilers****Three Credits**

Three hours of lecture per week. This course is an introduction to specifications and implementation of modern compilers. It addresses the techniques involved in source languages analysis and efficient generation of object codes with an emphasis on the components of a compiler. Topics include lexical analysis, parsing, type checking, code generation and translation, optimization, and implementation of modern programming languages.

CPEN 459**Artificial Intelligence****Three Credits**

Three hours of lecture per week. This course will introduce the basic principles in artificial intelligence research. Topics include simple representation schemes, problem solving paradigms, constraint propagation, and search strategies. Application areas such as knowledge representation, natural language processing, expert systems, robotic vision and machine learning will be explored.

CPEN 478**Distributed Systems****Three Credits**

Three hours of lecture per week. This course covers several topics in distributed systems. Topics include operating system architectures, network, distributed, and autonomous systems; design, concurrent programming, client/server models, synchronization, distributed process communication, time and resource scheduling, distributed/shared files and memory.

CPEN 481**Telecommunication Networks and Security****Three Credits**

Three hours of lecture per week. This course introduces participants to the key concepts of data communications, telecommunications, networking, technologies, components, and protocols used in local area networking (LAN) and wide area networking (WAN) environments. Students will learn about the popular LAN protocols of

Ethernet, Token Ring, and asynchronous transfer mode (ATM), with emphasis on all speeds of Ethernet. This course also introduces the most widely used network operating systems. Basic network design and security concepts are discussed.

CPEN 488**Advanced Computer Architectures****Three Credits**

Three hours of lecture per week. This course provides an in-depth overview of the current state of the art in high-performance computing. Topics to be covered include the history of computational science, processor architectures, multi-core systems, memory systems for high performance, input/output devices, ultra-scsi, fiber channel, and storage area networks. Introduction to parallel computing, supercomputing, grid computing, cluster computing, Beowulf systems, and performance benchmarks. Survey of supercomputer applications such as scientific visualization, ocean and atmospheric models, fluid flow, wave propagation, and np-complete problems.

CPEN 493**Senior Design Project I****Two Credits**

One two-hour lecture/discussion session and one two-hour seminar/workshop per week. Lecture discussion, seminars, workshops, and laboratory practice on a specific project. Analysis, simulation, and development of a design project. Discussion of alternative designs. Discussion of appropriate standards and realistic design constraints such as cost, environmentally friendly manufacturing, aesthetics, safety, possible social and political impact, and ethical considerations. Ethics workshops. Integration of hardware and software where appropriate. Seminars and workshops on contemporary issues. Teamwork required.

CPEN 494**Senior Design Project II****One Credit**

A one and a half hour lecture/discussion session and a one and a half seminar/workshop per week. Hands-on workshops and experimental practice on a specific project. Development, analysis, simulation, and implementation of a major design project to solve a specific problem in an industry or enterprise. Integration of hardware and software where appropriate. Teamwork required.

CPEN 495, 496, 497**Special Topics****One, Two, and Three Credits, respectively**

Special topics in computer engineering. Format will depend on course topic.

EETE 210**DC/AC Electronics****Four Credits**

Three hours of lecture and one three-hour lab per week. The course centers on basic concepts in the theory of electronic circuit analysis; semiconductor theory; the diode; bipolar junction transistors and BJT amplifiers, and field-effect transistors. Frequency response, multistage and operational amplifiers are also covered.

EETE 212**Digital Electronics****Four Credits**

Three hours of lecture and one three-hour lab per week. The course covers number systems and codes, digital electronics, signals and switches, logic gates and Boolean algebra, combinational logic circuits, flip-flops and related devices. Topics include Digital Arithmetic: operations and circuits, as well as code converters, multiplexers and demultiplexers.

EETE 214**Microprocessors****Four Credits**

Three hours of lecture and one three-hour lab per week. The course is an introduction to microprocessor-based systems. Topics include the 80X86 microprocessor family, software architecture, programming, and hardware architecture, as well as advanced topics.

EETE 216**Industrial Electronics****Four Credits**

Three hours of lecture and one three-hour lab per week. The course covers the theory and practice of modern electronic devices that are used in industrial applications. Topics include the use of the transistor switch as a decision circuit maker; programmable logic controllers; triacs and thyristors.

EETE 218**Communications****Four Credits**

Three hours of lecture and one three-hour lab per week. The course covers introductory topics, such as amplitude modulation (AM): transmission and reception; single-sideband communications; frequency modulation (FM): transmission and reception, as well as television and communications techniques.

EETE 220**Fundamentals of DC/AC Electronics****Three Credits**

In this course the student will learn the basic concepts of the theory of analysis of electronic circuits; theory of semiconductors; the diode; Bipolar Junction Transistor; amplifiers BJT and field effect transistors. In addition, the course covers response of frequencies and operational amplifiers and multistage. Circuits that are used in communication equipment, and systems of sound and instrumentation will also be analyzed.

EETE 223**Fundamentals of Computers Electronic****Three Credits**

The course covers the theoretical concepts of number systems and codes, digital electronics, signals and switches, logic modules and Boolean algebra, combinational logic circuits and related devices. Topics include Digital Arithmetic: operations and circuits. Code converters, multiplexers and demultiplexers. Furthermore, analyze digital circuits that are used in computers, communications systems and medical equipment.

EETE 240**Review for License Examination of Electronic Technician****One Credit**

Two hours lecture per week. The purpose of the course is to revise all the concepts that are necessary to take the final examination for electronics technician. It will cover the concepts of dc/ac, semiconductors, digital electronics, microprocessors, industrial electronics, communications, and instrumentation. At the end of the course a test simulating the final examination for electronics technicians will be offered.

ELEN 301**Electrical Networks I****Three Credits**

Three hours of lecture per week. Introduction to the analysis of linear circuits. Electrical quantities, Ohm's law, Kirchhoff's current and voltage laws, node voltage analysis, loop analysis, theorems of Thévenin and Norton, maximum power transfer, energy storage, introduction to AC circuits and computer-aided analysis.

ELEN 302**Electrical Networks I Laboratory****One Credit**

One three-hour laboratory session per week. Application of the theory learned in ELEN 301 Electrical Networks I. Characteristics of electrical components and circuits; use of electronic test equipment.

ELEN 311**Electrical Networks II****Three Credits**

Three hours of lecture per week. This course introduces the fundamentals of transient state analysis for second order circuits using differential equations, linear circuit analysis in the frequency domain, sinusoidal steady-state analysis and power calculations. Additional topics include Laplace transform techniques, frequency response analysis of balanced three-phase circuits, and two-port circuit analysis.

ELEN 312**Digital Logic Design I****Three Credits**

Three hours of lecture per week. This course is an introduction to the fundamentals of digital design concepts. The topics covered include positional number systems, switching algebra, logic function minimization, Karnaugh maps, combinational logic design using SSI, MSI, and LSI, and sequential logic analysis and design.

ELEN 313**Digital Logic Design I Laboratory****One Credit**

One three-hour laboratory session per week. This laboratory explores the characterization and application of typical digital logic circuits and covers the topics required for analyzing the behavior of logical networks. It reinforces the material covered in Digital Logic Design I (ELEN 312) and introduces material relevant to the use of electronic test equipment.

ELEN 330**Electronics I****Three Credits**

Three hours of lecture per week. An introductory course in electronics and microelectronics that covers semiconductor fundamentals, operational amplifiers, diodes, BJTs, MOSFETs, and basic digital switching. The course aims to build a solid understanding of these basic electronic devices by providing a clear understanding of device operation on a physical level, and then complements this with applications, analysis, and design of electronic circuits.

ELEN 332**Electronics I Laboratory****One Credit**

One three-hour laboratory session per week. Laboratory experiments. Design, building, and testing of electronic circuits containing op-amps, diodes, BJTs, and MOSFETs.

ELEN 360**Random Signals and Systems****Three Credits**

Three hours of lecture per week. This course introduces the physical origins of noise and modeling uncertainty for the analysis of electronic devices, analog and digital systems, and communications. The course covers basic discrete and continuous probability theory, random variables, and stochastic processes. Applications to the analysis of linear systems in the presence of noise and random signal processing are also presented.

ELEN 370**Electromagnetics****Three Credits**

Three hours of lecture per week. The course is an introduction to electromagnetic systems. Topics covered are transmission lines, electrostatics, boundary value problems, as well as Maxwell's equations and their applications. Also covered are plane waves, reflection and refraction of plane waves, and fundamentals of electromagnetic wave propagation and antennas.

ELEN 415**Signals, Systems and Control****Three Credits**

Three hours of lecture per week. This course covers the mathematical foundations for analyzing signals and linear systems with an engineering orientation. Time- and frequency-domain methods are presented and subsequently applied to analyze and design feedback control systems using classical control theory.

ELEN 417**Systems Laboratory****One Credit**

One three-hour laboratory session per week. This laboratory course provides practical experiences in control systems. The course encourages students to explore concepts in feedback control systems through laboratory experiments and open-ended projects. Feedback control experiments include modeling, identification, and servomechanism control.

ELEN 421**Electromechanical Energy Conversion Laboratory****One Credit**

One three-hour laboratory session per week. This laboratory explores the characterization and application of typical electrical energy conversion components. The laboratory experiments include testing and parameter identification for modeling of DC machines, transformers, poly-phase as well as single-phase systems, magnetic circuits, synchronous machines, and induction machines.

ELEN 422**Electrical Machines****Three Credits**

Three hours of lecture per week. This course deals with the analysis of electrical machines and transformers. Topics include the theory and operation of direct current motors, direct current generators, alternating current motors, alternating current generators and transformers. Also included are alternating current motors and transformers. Both single-phase and three-phase systems are included.

ELEN 423**Electric Machinery Fundamentals****Two Credits**

One hour lecture/discussion and three hours laboratory practice on specific projects per week. This course centers on the analysis of electrical machines and transformers. Topics include the theory and operation of direct current motors, direct current generators, alternating current motors, alternating current generators, and transformers. In the alternating current motors and transformers both single-phase and three-phase systems are included.

ELEN 430**Digital Electronics****Three Credits**

Three hours of lecture/laboratory-practice per week. Theory of operation of transistor-transistor logic (TTL), emitter coupled logic (ECL), metal-oxide-semiconductor (MOS), and complementary MOSFETs (CMOS) gates; time delay, operation of semiconductor memories; programmable logic arrays (PLA); multivibrators; analog gates; analog to digital (A/D) and digital to analog (D/A) converters. Laboratory experiments will be used to reinforce concepts.

ELEN 431**Electronics II****Three Credits**

Three hours of lecture per week. The course is an introduction to the concepts and techniques of practical electronic design. Topics include single-stage amplifier configurations, multi-stage amplifiers, frequency response,

feedback and stability, power amplifiers, active filters, oscillators, and advanced semiconductor properties.

ELEN 433**Electronics II Laboratory****One Credit**

One three-hour laboratory session per week. Experiments include design, testing, and measurements with advanced electronic circuits, frequency response, power amplification, sinusoidal oscillators, waveform generators, active filters.

ELEN 434**Instrumentation****Three Credits**

Three hours of lecture per week. The course is an introduction to the design of electronic systems for the measurement of physical variables. Topics include sensors and transducers, signal conditioning, noise, noise reduction techniques, grounding, shielding, signal recovery techniques, sampling, digital-to-analog conversion, analog-to-digital conversion, precision electronics, automated test equipment. The design, construction, and evaluation of instrumentation systems are also included.

ELEN 436**Power Electronics****Three Credits**

Three hours of lecture per week. Application of electronic devices to the conversion of electrical power. Device fundamentals, controlled rectifiers, AC voltage controllers, AC-DC converters, DC to DC converters, DC to AC inverters, motor controllers, snubbers, thermal design considerations. Design, simulation, construction, and testing of power electronic components and systems.

ELEN 441**Digital Logic Design II****Three Credits**

Three hours of lecture per week. This course covers additional theoretical and practical aspects in digital systems and sequential logic design. Topics include additional minimization techniques, synthesis techniques, asynchronous sequential logic, interfacing, programmable logic devices, design considerations for practical systems, high speed logic design, design for testability, implementation of logic circuits using MSI, LSI, CPLDs, FPGAs, VHDL, CAD tools, and digital test equipment.

ELEN 442
Microprocessors I
Three Credits

Three hours of lecture per week. This is an introductory course in computers and microprocessors. It focuses primarily on software aspects. Topics include CPU architecture, microprocessors, microcontrollers, assembly language programming, interrupts, I/O peripherals, memory, system architecture, and simple interfacing.

ELEN 443
Microprocessors II
Three Credits

Three hours of lecture per week. The course centers on advanced topics in microprocessor systems design. Topics included are timing, memory architecture, interrupts, interfacing peripherals, design for testability, system buses, embedded and real-time systems, hardware and software aspects of interfacing, hardware-software tradeoffs, high level languages, in-circuit emulators, disassembling logic analyzers, and simulators.

ELEN 447
Microprocessors Laboratory
One Credit

One three-hour laboratory per week. This course covers advanced topics in microprocessor systems design. These include: system timing, memory architecture, interrupts, interfacing peripherals, design for testability, system buses, embedded and real-time systems, hardware and software aspects of interfacing, hardware-software tradeoffs, high level languages, in-circuit emulators, disassembling logic analyzers, and simulators.

ELEN 460
Digital Signal Processing
Three Credits

Three hours of lecture per week. This course provides a practical introduction to digital signal processing concepts. Topics include discrete-time signals and systems, sampling, convolution, z-transforms, frequency response, discrete-time Fourier transform, fast Fourier transform (FFT), and digital filtering (IIR and FIR)

ELEN 472
Antennas and Transmission Lines
Three Credits

Three hours of lecture per week. The course is an introduction to analysis, characterization, and design of transmission lines, wave guides, and antennas. Topics include telegraphy equations, lossless lines, characteristic impedance matching, bounded wave propagation modes, cavity resonators, planar and dielectric wave guides, vector

potential, antenna types, impedance, radiation patterns, and antenna feeds.

ELEN 474
Communication Systems I
Three Credits

Three hours of lecture per week. This course provides an introduction to communication systems. Topics introduced include basic modulation and demodulation techniques and performance of digital communication systems in the presence of noise. Also included are linear modulation, angle modulation, sampling and pulse code modulation, detection-error probability, and behavior of digital communication systems in the presence of noise.

ELEN 475
Communication Systems II
Three Credits

Three hours of lecture per week. The course is an introduction to the analysis of analog communication systems in the presence of noise. Topics include signal detection, as well as Introductions to information theory and to error correcting codes.

ELEN 478
RF Design
Three Credits

Three hours of lecture per week. This course introduces the fundamentals of radio frequency (RF) circuits and design. It covers the behavior of circuit components at radio frequencies, transmission line theory, the use of Smith charts in impedance matching, and the design of various RF circuits such as amplifiers, oscillators, mixers, and super-heterodyne receivers.

ELEN 480
Power System Analysis I
Three Credits

Three hours of lecture per week. This is an introductory course in electrical power systems. The course emphasizes the modeling of power system components, determination of transmission system parameters, generalized network analysis to characterize a power system in steady-state including load-flows. It also incorporates the use of computer software packages to aid in the analysis and design of power systems.

ELEN 481
Power System Analysis II
Three Credits

Three hours of lecture per week This is a second course in power system analysis and forms a continuation of the topics introduced in ELEN 480. The course presents the concepts and system analysis and design techniques necessary to

evaluate the performance of power systems. Fault analysis of power systems using matrix formulation of bus admittance and impedance matrices is also studied. Balanced three-phase faults as well as unbalance faults are included. Unbalanced systems are analyzed using symmetrical components technique. Power system protection methods and equipment are also studied. The course incorporates the use of computer software packages to aid the analysis and design of power systems.

ELEN 484

Power Transmission and Distribution

Three Credits

Three hours of lecture per week. This course deals with power transmission and distribution systems analysis and design. Topics include transmission line characteristics, inductance and capacitance calculations of overhead lines, steady-state analysis, transmission losses, and transmission system design. In the distribution system area, the topics covered include distribution system analysis, voltage regulation, and distribution system design. The course provides a practical insight into the analysis of transmission and distribution systems.

ELEN 488

Power System Reliability

Three Credits

Three hours of lecture per week. This is an introductory course in power system reliability evaluation with emphasis on probabilistic techniques. The course introduces the basic reliability concepts using probability and statistics. The significance of outage data collection and classification in realistic system planning will be examined. The course concludes with a final design project.

ELEN 493

Electrical Engineering Design Concepts

Two Credits

One two-hour lecture/discussion session and one two-hour seminar/workshop per week. The course includes lecture discussion, seminars, workshops, and laboratory practice on a specific project. It centers on the analysis, simulation, and development of a design project, and includes discussion of alternative designs. Also included are discussions of alternative designs. Discussion of appropriate standards and realistic design constraints such as cost, environmentally friendly manufacturing, aesthetics, safety, possible social and political impact, and ethical considerations. Ethics workshops will be included. Where appropriate, integration of hardware and software will be discussed. Seminars and workshops on contemporary issues are also included. Teamwork is required.

ELEN 494

Major Design Experience

One Credit

A one and a half hour hands-on workshop and a one and a half hour session of experimental practice per week. Hands-on workshops and experimental practice on a specific project. Development, analysis, simulation, and implementation of a major design project to solve a specific problem in an industry or enterprise. Integration of hardware and software where appropriate. Teamwork required.

ELEN 495, 496, 497

Special Topics

One, Two, and Three Credits, respectively

Special topics in electrical engineering. Format will depend on course topic.

ELEN 498

Undergraduate Research I

Three Credits

Three hours of seminar per week. This course introduces basic undergraduate research on specific electrical/computer engineering topics.

ELEN 499

Undergraduate Research II

Three Credits

Three hours of seminar per week. This course expands the undergraduate research experience in specific electrical/computer engineering topics.

ENGI 101

Introduction to Engineering Technology

Three Credits

Three hours of lecture/workshop per week. This is an introductory required course for all first-year associate degree students in computer technology or the engineering technology program. It is an introduction to the various specialties within the engineering and technical profession. Topics include basic concepts of engineering design and technical communication, as well as laws and ethics of the engineering and technical professions.

ENGI 121

Introduction to Computers

Three Credits

Three hours of lecture-lab discussion per week. This is an introductory required course for all first-year associate degree students in computer technology or in the engineering technology program. It is an introduction to the history of computers. The course will familiarize students with basic computer software and hardware. Students will

also learn to use software packages such as Word, Excel, and Power Point, as well as how to design Internet Web pages.

ENGI 122
Introduction to Computer Programming
Three Credits

Three hours of lecture-workshops per week. This course is an introduction to computer programming and the Visual Basic (VB) programming language. The first half of the course covers VB for Applications using Excel and the fundamental programming structures of control statements, loops, operators, and functions. The second half of the course explores programming applications using other VB compiler options. Problem analysis, algorithms, flowcharts, and structured programming concepts are used throughout the course.

ENGI 160
Engineering Graphics
Three Credits

Three hours of lecture/studio per week. The course centers on the principles of engineering graphics including free sketching and computer graphics (SolidWorks). Topics include fundamentals of 3D projections and multiview projections; sheet layout and scaling; dimensioning; tolerance; solid modeling; assembly of parts and engineering working drawings.

ENGI 161
Engineering Technology Graphics
Three Credits

The course centers on the principles of engineering drawing using sketching and computer graphics (Solid Work). It includes an introduction to descriptive geometry. The fundamentals of orthographic projections, pictorials, auxiliary views, sectioning, dimensioning, tolerance, and working drawings are also presented. In addition, the student will apply freehand techniques to sketch oblique and isometric 3D projections.

ENGI 223
Intermediate Programming
Three Credits

Three hours of lecture per week. This is an intermediate-level course in computer programming. It provides a wealth of current, real-world applications, and examples drawn from the scientific and engineering fields. It allows students to fully exploit the potential uses of C and C++ programming languages. This course includes problem analysis and design of algorithms, programming structures, modular programming, sorting, searching, pointers, multidimensional arrays, string processing, structures, and file processing.

ENGI 223L
Intermediate Programming Laboratory
One Credit

Two one and a half hour of laboratory sessions per week. This is an intermediate-level laboratory course in computer programming. It includes hands-on workshops and experimental practice on two or three projects, as well as development, analysis, simulation, and implementation of a design project to solve a real world problem.

ENGI 244
Engineering Materials
Three Credits

Three hours of lecture per week. The course centers on the governing principles of material properties and behavior. Topics include atomic structures and bonding, crystalline structures, defects and dislocations. Diffusion, deformation, and material strengthening are also discussed. Other topics include phase transformations and diagrams, polymers, ceramics, and composites. Corrosion will also be discussed.

ENGI 277
General Statics and Dynamics
Three Credits

Three hours of lecture per week. The course is a compendium for non-mechanical engineering majors. In the area of statics, topics include planar (2D) force/moment vectors and resultants, static equilibrium and free body diagrams. Topics include applications to particles, beams, trusses, and frames. Other topics discussed are friction, centroid and moment of inertia of composite areas, vectors, resultants, and equilibrium of a particle in 3D. In the area of dynamics, topics include planar kinematics/kinetics of particles using rectangular and normal-and-tangential coordinate systems, projectile motion, free body diagrams and kinetic diagrams. Other topics discussed are kinematics of a rigid body rotating about a fixed axis, and velocity analysis of rigid bodies in general plane motion using relative motion analysis. Mass moment of inertia, as well as kinetics of a rigid body in translation and in rotation are also discussed.

ENGI 305
Fluid Mechanics
Three Credits

Three hours of lecture per week. The course centers on the fundamental concepts of fluid mechanics and their applications to engineering problems. Topics include fluid statics; integral form for control volumes (conservation of mass, momentum equation, Bernoulli equation); differential form (conservation of mass and an introduction to the Navier-Stokes equation), and dimensional analysis. The course also includes calculation of head loss in pipes, introduction to boundary layers, and lift and drag forces.

ENGI 310
General Thermodynamics
Three Credits

Three hours of lecture per week. This course is designed for engineering students in programs other than mechanical engineering. It includes an introduction to first and second laws of thermodynamics with applications, as well as an introduction to heat transfer with general applications.

ENGI 318
Strength of Materials
Three Credits

Three hours of lectures per week. The course centers on the analysis of stress and strain. Topics include stress-strain, torsional and flexural loading, bending moment and shear force diagrams. Other topics discussed include bending, combined loading, stress and strain transformation, beam deflection and the application of superposition. Elastic stability will also be discussed.

ENGI 319
Materials Testing Lab
One Credit

One three-hour laboratory per week. The course centers on standard physical tests of engineering materials, including tension, bending, micro-hardness and macro-hardness. Basic metallurgy, including grinding, polishing, etching and micro-structure identification are also discussed. Other topics include heat treatment of steel including quenching and the Jominy test.

ENGI 333
Machine Shop Laboratory
Three Credits

Three hours of laboratory per week. The course centers on the operation of drills, milling machines, lathes, power saws, and surface grinders. It includes an introduction to precision measuring techniques, as well as an introduction to welding.

ENGI 398
Engineering Mathematics
Three Credits

Three hours of lecture per week. This course provides advanced engineering mathematics necessary to analyze and design complex electrical and electronic devices, circuits, and systems. Selected topics from linear algebra, complex variables, and partial differential equations are presented. Topics include matrix algebra, determinants, inverses, eigenvalues and eigenvectors; complex numbers, functions of complex variables, complex integration, complex power series, residue integration; partial differential equations, diffusion equation, wave equation, and Laplace equation. Applications to analysis of linear circuits, control and

communication systems, and electromagnetic waves are discussed.

ENGI 406
Fluid Mechanics Lab
One Credit

One three-hour laboratory per week. This course focuses on laboratory work that supplements classroom instruction in fluid mechanics phenomena. It includes; measuring devices and techniques, as well as; testing of fluid machinery.

ENGI 410
Engineering Economy
Three Credits

Three hours of lecture per week. The course is an introduction to the basic concepts, techniques, and methodologies of engineering economy. These are, useful in evaluating the economic feasibility of engineering systems, projects, and services for effective decision-making.

ENGI 478
Fundamentals of Engineering
Three Credits

Three hours of lecture per week. The course is a review for the Fundamentals of Engineering (FE) exam to aid student preparation and exam performance.

ENGY 103
Electrical Energy: Basic Concepts
One Credit

One hour of lecture per week. A basic course on energy with emphasis on electrical energy and power. It includes definitions, forms, and history, as well as energy and power concepts. Energy and energy sources are discussed according to characteristics such as: sustainability, reliability, efficiency, and costs.

ENGY 203
Fundamentals of Electrical Energy Systems
One Credit

One hour of lecture per week. The course centers on the fundamentals of energy, with emphasis on electrical energy. Topics include; units of measurement, conservation, and energy in various contexts. Energy transformations, renewable sources, and availability are also discussed.

ENGY 303
Energy and Electrical Power Systems
One Credit

One hour of lecture per week. The course centers on energy and electric power, power transmission, energy and laws of motion. Measurements, limitation, integrating of energy sources, losses, and efficiency are also discussed.

ETRE 110
Fundamentals of Electrical Circuits and Power
Five Credits

Seven Lecture -Lab. hours per week. This course introduces the basic concepts of electrical circuits and electric power. The student will have the opportunity to learn and to apply the knowledge of electrical safety, Ohm's Law, Kirchhoff's Law, resistive, capacitive and inductive circuits, magnetism and electromagnetism. In addition, the three-phase system, transformers and power factor will be studied. The course will be complemented by a section of laboratory for the application of its theoretical concepts.

ETRE 115
Introduction to Renewable Energy
Two Credits

Four hours lecture. In this course the student will acquire the basics concepts of renewable energy systems. It will examine global climate change, energy use and dependence on fossil fuels, sustainable energy and vision of current energy demand and patterns supplied. In addition, the student will know the rules and regulations that govern this technology.

ETRE 120
Electrical Installations and NEC
Four Credits

Seven hours lecture-lab per week. This course uses the National Electrical Code (NEC) and other regulations for development of electrical installations on houses and buildings. The student will discuss the following topics; interior and exterior wiring, electrical panels' installation, and lighting fixtures. Use of electrical plans. The course will be supplemented by a laboratory section for the application of theoretical concepts.

ETRE 125
Fundamentals of Electrical Machinery
Four Credits

Seven hours' lecture-lab per week. In this course the student will acquire and apply the theoretical knowledge and the necessary skills in the use and handling of electrical machines. They will study functioning, installation, maintenance and troubleshooting of these equipment. Motors, generators and electrical machines will be used in the laboratory practices.

ETRE 130
Photovoltaic System and Installation
Three Credits

Four hours lecture-lab per week. In this course the student will acquire the knowledge's on photovoltaic systems. Will be studied their parts, operation, installation, and maintenance. PV cells, batteries, charge controllers, inverters and other equipment will be used in the laboratory.

The rules and regulations governing this technology will be discussed and applied.

ETRE 140
Supervised Project
Three Credits

Seven hours' lecture-lab per week. In this course the students will apply knowledge gained in previous courses. Through this project they will develop skills that are needed to work in the field of electrical industry. Students will be assessed by their instructor/mentor in the workshop of the project and their class.

ETRE 240
Electronic for Electricians
Two Credits

Four hours lecture-lab per week. This course centers on the basics of electronic circuits. The student will have the opportunity to learn and apply knowledge of diodes, transistors, amplifiers, power supplier, transducers, and integrated circuits. The course will be supplemented by laboratory sessions dedicated to the application of the theoretical concepts.

ETRE 245
Wind Power System and Installation
Three Credits

Three hours lecture- lab per week. In this course the student will acquire knowledge and skills to work with Wind Power Systems. Their parts, operation, installation, and maintenance will be discussed. Wind turbines, anemometer, inverters and other equipment will be used in the laboratory. The rules and regulations governing this technology will be included and applied.

ETRE 250
Electrical Controls and PLC
Four Credits

Four hours lecture practice per week. This course is designed for the student to acquire knowledge and skills in the use, installation, operation and maintenance of motor controls, electric generators, and other machines. It will study the characteristics of relays, magnetic contactors, solenoids and others electrical control devices.. Students will apply the concepts of Programmable Logic Controllers (PLC). The course will be supplemented by a laboratory section.

ETRE 255
Review for License Examination of Electrician
Three Credits

Three hours lecture/lab per week. The basic knowledge and skills of previous courses will be reviewed. The concepts of analysis, application, operation, and maintenance of electrical systems will be discussed again. Problems in electrical installations, machinery, three-phase systems and

controls are included to provide the student with the knowledge and skills necessary to take the electrician's licensing exam offered by the government of Puerto Rico.

ETRE 260

Electrical Installations

Three Credits

This theoretical and practical course contains the installation techniques used in industrial sectors and planning and installation of low and high voltage distribution panels. Topics also include methods of testing and maintenance of low and high voltage distribution panels. The application of safety rules and procedures will also be discussed.

ETRE 265

Principles of Electrical Controls and PLC

Three Credits

This course is designed for students to acquire knowledge and skills in the use, installation, operation and maintenance of motor controls, electric generators, and other machines. Students will study the characteristics of relays, magnetic contactors, solenoids and others electrical control devices.. They will also apply the concepts of Programmable Logic Controllers (PLC).

ETRE 265L

Laboratory of Principles of Electrical Control and PLC

One Credit

This laboratory course provides students with theoretical concepts and practical skills of different types of existing electric control systems. The concepts of magnetic systems and automatic controls will be discussed. Issues regarding operating principles, selection, and specifications of various electrical controls will also be addressed. The use of different control components such as magnetic contactors, timers and counters, programmable logic controllers and others will be discussed, as well as the application of safety rules and codes.

FSEN 105

Introduction to Engineering

Three Credits

Three hours of lecture/workshop per week. This is a required introductory course for all first year engineering students. It introduces to the various specialties within the engineering profession, and discusses basic concepts of engineering design and technical communication. Laws and ethics of the engineering profession are also discussed.

ICET 210

Fundamentals of Instrumentation and Calibration

Three Credits

Five hours of lecture-lab discussion per week. This course provides the student the basic elements of instrumentation and calibration. The concepts of pressure, temperature, level and flow will be discussed. Topics include the principles of operation, selection and specifications of different instruments. Students will apply the principles of calibration of industrial instruments such as valves, sensors and other components.

IMEN 205

Introduction to Engineering Management

Three Credits

Three hours of lecture per week. The course is an introduction to the principles of administration of engineering, including the management functions of planning, decision making, organizing, human aspects, leading, and controlling.

IMEN 341

Finance for Engineers

Three Credits

Three hours of lecture per week. The course centers on the Interrelationships between engineering design and business assessment of capital projects. It includes the study of the central role of engineering design in determining a project's implementation and its financial requirements. The course includes theory and practical aspects of accounting principles, financial and risk analysis from an engineering perspective. It emphasizes the understanding and analysis of the three main financial statements: balance sheet, income statement, and cash flow. Cost of capital, sensitivity and risk analysis in engineering projects are also discussed.

IMEN 390

Engineering Statistics and Data Analysis

Four Credits

Five hours of lecture/laboratory per week. The course centers on fundamental concepts of variation and approaches to deal with this phenomenon in practice. It includes data analysis and synthesis, axioms of probability, and discrete and continuous random variables with their industrial applications. Random samples, central limit theorem and sampling distributions and their applications will be discussed. Topics include estimation and hypothesis testing on one or two populations and simple regression. Introduction to multiple regression and the use of computer software.

IMEN 402
Work Measurement
Four Credits

Three hours of lecture and one two-hour laboratory per week. The course is an introduction to motion and time study, including work design, job analysis, and the techniques of setting time standards.

IMEN 403
Work System Design
Three Credits

Three hours of lecture per week. The course is an introduction to ergonomic principles and work environments applied to workplace design.

IMEN 404
Industrial Safety and Health Management
Three Credits

Three hours of lecture per week. The course is an introduction to concepts and techniques of safety and health management, based on a modern perspective on compliance with mandatory standards for workplace safety and health.

IMEN 405
Statistical Quality Control
Four Credits

Five hours of lecture/laboratory per week. The course centers on the application of engineering statistics to the control and improvement of manufacturing and service processes with an emphasis on quality.

IMEN 406
Operations Research
Three Credits

Three hours of lecture per week. The course is an introduction to the operations research modeling approach with emphasis on linear programming and extensions, the simplex method and its applications.

IMEN 407
Production Planning and Control
Three Credits

Three hours of lecture per week. The course centers on theoretical and practical aspects of production systems, problem solving, forecasting, aggregate planning, inventory, materials requirements planning, scheduling, integrated production planning and control. The course aims to demonstrate how these can be applied in practice.

IMEN 408
Facility Layout
Three Credits

Three hours of lecture per week. This course provides the students analytical methods for designing production and service facilities.

IMEN 409
Design Project
Three Credits

Three hours of lecture per week. Analysis, development of alternatives, and presentation of a design project of a company.

IMEN 411
Systems Analysis and Design
Three Credits

Three hours of lecture per week. This is a basic course on the analysis and design of computer based information systems, including system requirements analysis and documentation, logical and physical modeling, system architecture, and interface design. The course follows a model-driven approach to system analysis and design, and covers various methodologies for data, process, and object-oriented modeling and design.

IMEN 413
Probabilistic Models in Operations Research
Three Credits

Three hours of lecture per week. The course is an introduction to theory and use of stochastic models to represent and improve industrial and service systems. It includes Markov Chains, Queuing Models and Decision Analysis.

IMEN 414
Systems Simulation
Three Credits

Three hours of lecture/laboratory per week. This is a basic course on the application of discrete event-based simulation to the design, analysis, and improvement of production, logistics, and service systems. The course includes techniques and methodologies for the generation of random numbers and variates, data collection and analysis, model building using Pro-Model, model verification and analysis, and output analysis.

IMEN 416
Design of Industrial Experiments
Three Credits

Three hours of lecture per week. The course centers on fundamental concepts of experimentation-factors, responses, levels, randomization, replication, random error, and blocking. It emphasizes the use of statistical software.

IMEN 420
Models in Facility Planning & Material Handling
Three Credits

This is a computer-based course that uses models such as forecasting, project control, master schedule, production planning, and inventory control.

IMEN 421
Engineering Project Management
Three Credits

Three hours of lecture-discussion per week. The course centers on the theoretical and practical aspects of project planning, organizing, scheduling and resources management. Emphasis is on identifying the main components and life cycle of project management and showing how they may be applied in practice, e.g., capacity increase, new production lines, software development, and enterprise start-ups. The course includes application of project management software.

IMEN 425
Enterprise Continuous Improvement
Three Credits

Three hours of lecture per week. Fundamental concepts of Lean Manufacturing, Six Sigma and other contemporary performance improvement methodologies or quality management systems.

IMEN 495, 496, 497
Special Topics
One, Two and Three Credits respectively

Special topics in industrial and management engineering. Format will depend on course topic.

IMEN 498
Undergraduate Research I
Three Credits

Three hours of seminar per week. This course introduces basic undergraduate research on specific industrial and management engineering topics.

IMEN 499
Undergraduate Research II
Three Credits

Three hours of seminar per week. This course expands the undergraduate research experience on specific industrial and management engineering topics.

INNO 300
Sustainable Innovation
Three Credits

Three hours of lecture per week. This course examines the innovation process using a trans-disciplinary approach to provide a holistic view of innovation. It borrows on perspectives from the business, human sciences, design and art, as well as from the technical domains while trying to answer two fundamental questions: How innovation happens and how the process can be sustained and sustainable.

MAET 201
Fundamentals of Manufacturing
Three Credits

Three hours of lecture per week. This course covers the basic concepts of manufacturing, its areas, processes and applied technologies. Different manufacturing industries will be discussed and different materials and equipment used for product development will be identified.

MEEN 312
Kinematics of Mechanisms
Three Credits

Three hours of lecture per week. Introduction to the kinematics principles of inversion, transmission of motion, and mobility. It includes the analysis of mechanism components such as four-bar linkages, cams, spur gears, and gear trains; synthesis of plane kinematics mechanisms. One or more design projects require the application of course topics.

MEEN 320
Thermodynamics I
Three Credits

Three hours of lecture per week. The course centers on the first and second laws of thermodynamics, as well as; properties, equations of state and thermodynamic relations.

MEEN 340
Computer Aided Design
Three Credits

Three hours of lecture/studio per week. The course is an introduction to Computer Aided Design. It includes an introduction to Finite Element Analysis. Other topics are finite element modeling using Cosmos Works software, and an introduction to dynamic analysis using the Working Model software.

MEEN 401
Manufacturing Processes
Three Credits

Three hours of lecture per week. The course is an introduction to manufacturing. Topics discussed include materials in manufacturing, an overview of casting, bulk deformation, and metal removal processes. Manufacturing process of plastics and composites will also be discussed.

MEEN 418
Experimental Methods
Two Credits

One hour of lecture and one three-hour laboratory per week. The course centers on principles of measurement. Topics include operational characteristics and limitations of various transducers, error analysis, an introduction to Labview and computer data acquisition.

MEEN 420
Heat Transfer
Three Credits

Three hours of lecture per week. The course deals with basic principles and applications of the three heat transfer modes: conduction, convection, and radiation, in steady and unsteady states.

MEEN 421
Thermodynamics II
Three Credits

Three hours of lecture per week. The course centers on extensions and applications of the first and second laws of thermodynamics including: real gases, psychrometrics, power and refrigeration cycles, and combustion processes.

MEEN 425
Design of Machine Elements
Three Credits

Three hours of lecture per week. The course deals with static and fatigue failure theories. Topics include design of mechanical elements such as springs, threaded fasteners, bearings, gears, shafts, clutches, and brakes.

MEEN 451
Process and Product Design
Three Credits

Three hours of lecture per week. The course centers on the dynamics of converting ideas to marketable products. Topics include the role of visual and written communications in market definition and product promotion; impact of new product decisions on the factory; cross-cultural problems in introducing new products overseas; facility layout, material flow, handling systems, design and analysis of work systems.

MEEN 460
Control of Dynamic Systems
Three Credits

Three hours of lecture per week. This course introduces fundamental concepts of classical control theory. Topics include dynamical system modeling, the Laplace Transform, representation of systems by means of block diagrams, variables of states, stability of system and control system characteristics, components of feedback control systems, performance of feedback systems, robustness, and stability. Design techniques such as the root locus method and Bode plots are also presented. The course is enriched by extensive use of computer software to design and simulate complex systems.

MEEN 461
Controls Laboratory
One Credit

One three-hour laboratory session per week. The course centers on the application and practice of control systems. Topics include PLC Programming, MATLAB programming, and Simulink Programming. Students explore concepts in feedback control systems through laboratory experiments (modeling, identification, and servomechanism control) and open-ended projects.

MEEN 464
Mechanical Vibrations
Three Credits

Three hours of lecture per week. The course is an introduction to vibration of mechanical systems. Topics include free vibration of undamped and damped systems, response to harmonic excitation of undamped and damped systems, vibration instrumentation, design and for vibration suppression, as well as free and forced vibration of two degree of freedom system.

MEEN 465
Vehicle Dynamics Fundamentals
Three Credits

Three hours of lecture per week. The course centers on fundamentals of vehicle dynamics. Topics include acceleration and braking performance, road loads and ride, suspension, steering, rollover and tires.

MEEN 474
Finite Element Analysis with Applications
Three Credits

Three hours of lecture/studio per week. The course is an immersion into the use of finite element analysis to solve complex, real-world heat transfer and structural analysis problems. Theoretical knowledge of fundamental finite

element concepts are presented. The emphasis is on applications using commercial finite element software.

MEEN 475

**Multidisciplinary Experience in Industry
One Credit**

Four hours of lectures/workshops per week. The course is a multidisciplinary experience in industry for senior students through projects with local manufacturing industries. Design content highly dependent on current availability of projects in industry. The course includes seminars on project planning, ethics, communication, value engineering, and job-hunting skills.

MEEN 477

**Solar Technologies
Three Credits**

Three hours of lecture per week. The course centers on fundamentals of solar energy; spectral distribution, availability of solar energy, thermal energy storage, concentrators, and receivers. Solar-only and solar-hybrid systems, as well as; solar subsystems are discussed.

MEEN 481

**Mechanical Systems Design
Three Credits**

Three hours of lecture per week. The course consists of major experience in the design experience of an engineering system, including completion of a semester-length design project, engineering design techniques and methodology.

MEEN 482

**Failure of Materials in Mechanical Design
Three Credits**

Three hours of lecture per week. The course centers on the design of structures to prevent mechanical failure. Topics include modes and theories of failure, as well as stress, strain, deformation, and their relationships. Fracture and fatigue analysis and prevention are also discussed, as are design against creep, fretting, wear, and corrosion failures.

MEEN 484

**Corrosion in Metals
Three Credits**

Three hours of lecture per week. The course is an introduction to fundamental principles of corrosion; eight forms of corrosion. Topics includes; electromechanical test methods; corrosion environments; corrosion control methods; failure analysis and economics.

MEEN 485

**Thermal Systems Design
Three Credits**

Three hours of lecture per week. The course centers on the analysis and design of energy systems. Design content emphasizes sizing of components. Topics include piping networks, heat exchangers, prime movers, and solutions using numerical methods.

MEEN 489

**Air Conditioning
Three Credits**

Three hours of lecture per week. The course centers on the analysis and design of air conditioning and refrigeration systems.

MEEN 495, 496, 497

**Special Problems
One, Two and Three Credits respectively**

Course credit and format will depend on the specific problem. Special design problems will be offered by the engineering faculty.

MEEN 498

**Undergraduate Research I
Three Credits**

Three hours of seminar per week. This course introduces basic undergraduate research on specific mechanical engineering topics. The subjects covered in class are described in terms of experimental and/or numerical or analytical analysis.

MEEN 499

**Undergraduate Research II
Three Credits**

Three hours of seminar per week. This course expands the undergraduate research experience on specific mechanical engineering topics. The proposed subjects covered in class are related to experimental and numerical methods.

METE 220

**CAD/CAM Technology
Four Credits**

Three hours of lecture and one three-hour laboratory per week. The course is an introduction to CAD/CAM. Students generate working drawings of machine parts and/or products. They learn to create 3-D models of mechanical parts using Solid Works surfacing and solid modeling commands.

METE 222**Properties of Materials****Four Credits**

Three hours of lecture and one three-hour laboratory per week. The course covers the basics required for successful design of machine members, parts and connections. Topics include the selection of materials according to their strength and function, based on testing and design.

METE 224**Manufacturing Process Technology****Four Credits**

Three hours of lecture and one three-hour laboratory per week. The course is an introduction to manufacturing processes and provides an overview of casting, forming, and metal removal processes. Manufacturing processes of plastics will also be discussed.

METE 226**Air Conditioning & Refrigeration Technology****Four Credits**

Three hours of lecture and one three-hour laboratory per week. Refrigeration and air conditioning systems are covered in detail, along with the safe handling of refrigerants. Students will also study fans, fan laws, duct layout and sizing, as they pertain to air conditioning systems. Techniques for designing air conditioning and refrigeration systems for buildings will also be discussed.

METE 228**Mechanical Measurements Technology****Four Credits**

Three hours of lecture and one three-hour of laboratory per week. The course centers on the study of measurement technology, coordinate measuring machines, surface finish measurements, machine vision, and particle measurement in a clean environment. The monitoring of processes and operations, automatic control and data analysis will also be discussed.

METE 230**Principles of Pneumatic and Hydraulic Systems****Four Credits**

Two hours of lecture and one three-hour of laboratory per week. This course covers the theoretical and practical principles of hydraulics and pneumatics systems. The student acquires knowledge of the design, installation and repair components such as valves, compressors, actuators, regulators and other associated components. Skills in blueprint reading and schematics related with industrial hydraulics and pneumatics field are also developed.

METE 233**Fundamentals of Refrigeration and Air Conditioning****Three Credits**

In this refrigeration and air conditioning course, the student will develop knowledge about the following topics: characteristics of refrigerants, temperature, pressure, tools and equipment, welding, system components, compressors, evaporators, and metering devices. Students will also study the burden and evaluation of systems and leak detection. They will also explore basic system maintenance, the use and care of oils and additives, and troubleshooting of small commercial systems.

METE 233L**Laboratory of Fundamentals of Refrigeration and Air Conditioning****One Credit**

In this laboratory course students will apply the theoretical knowledge acquired in METE 240, Fundamentals of Refrigeration and Air conditioning. The student will learn techniques for leak detection, evacuation, refrigerant charge and the recovery of refrigeration and air conditioning. The course also includes flowcharts, various thermodynamics appendices, conversion factors, coolant pressure and analysis of heating by pressure. The student will also apply the laws of thermodynamics in the course.

METE 235**Fundamentals of Properties of Materials****Three Credits**

The course centers on the fundamental principles of structure and properties of materials utilized in the practice of technology engineering. Properties of materials are related to atomic, molecular, and crystalline structures. Topics include metals, ceramics, multiphase systems, and polymeric materials. The relationship between structure and electrical, mechanical, thermal, and chemical properties will also be discussed.

METE 235L**Laboratory of Fundamentals of Properties of Materials****One Credit**

In this laboratory course the theoretical knowledge acquired in the course METE 235 Fundamentals of Properties of Materials will be applied. The student will have the opportunity to develop different types of tests for metals, plastics and wood. Equipment used in the course includes microscopes and hardness equipment, among others. In this course students will also apply all safety rules established for the Mechanical Engineering Laboratory.

METE 245
Fundamentals of Manufacturing Processes
Technology
Three Credits

In this course the students learn the fundamentals of manufacturing processes, including interrelationships between the properties of the material, the manufacturing process and the design of components. Topics include an overview of casting, forming, and metal removal processes. Manufacturing processes of plastics and wood will be discussed. Emphasis will be on process selection for optimum design.

METE 245L
Laboratory of Fundamentals of Manufacturing
Processes Technology
One Credit

In this laboratory course students will apply the theoretical knowledge acquired in METE-245 Principles of Manufacturing Processes Technology. Students will have the opportunity to acquire technical skills in the development of mechanical components. Equipment used includes lathes, milling machines, drills and other specialized equipment for the design industrial parts. Safety rules and procedures will be applied in the laboratory.

METE 247L
Laboratory of Fundamentals of Welding
One Credit

In this course the student will acquire knowledge and skills related to the field of welding. The materials, techniques and procedures relating to . The student will have the opportunity to practice oxy-acetylene soldering, shielded metal arc, gas metal and plasma cutting and more. Students will follow all the safety rules that govern this field, as well as the procedure used for the management and use of gas.

METE 250
Principles of Pneumatics and Hydraulics
Four Credits

This course covers the theoretical and practical principles of hydraulic and pneumatic systems. The student will acquire knowledge of the design, installation and repair components such as valves, compressors, actuators regulators and other associated components. Skills in blueprint reading and schematics related to the field of industrial hydraulics and pneumatics are developed. The student will apply safety rules and procedures in the laboratory.

METE 251
Introduction to Industrial Mechanics
Three Credits

The course provides basic mechanical skills and repair techniques common to most fields of industrial maintenance. Topics discussed include precision measuring instruments and general safety rules common in industry, including lock-out/tag-out. This is a hands-on course and includes troubleshooting and overhaul of mechanical systems such as pumps, assembly lines, conveyors, and associated industrial machinery.

PHSC 120
Technical Science
Three Credits

Three hours of lecture and one three-hour lab per week. This is a course designed for technicians who require a working knowledge of the basic principles of physics. The course provides students with an introduction to the basic principles and applications of mechanics, the concepts of rotation, simple harmonic motion, properties of materials, fluids, heat and temperature, and electricity.

QETE 230
Quality Management Principles
Three Credits

Three hours of lecture per week. The course focuses on the organizational goal of producing a quality product or service. Topics discussed include the significance and benefits of quality, the cost of quality and problem solving tools for continuous improvement. Other topics discussed are: an overview of quality philosophy, principles of quality, commitment to continuous improvement, customer focus and paradigm shift, understanding process variation and employee involvement.

QETE 232
Quality Improvement Tools
Three Credits

Three hours of lecture per week. The course centers on the tools that provide the basics for examining processes and systems and making data-based decisions to improve work processes and systems. The course covers the 7-step improvement process and includes flow-charting, Pareto charts and cause-effect diagrams.

QETE 234
Statistical Process Control and Metrology
Four Credits

Three hours of lecture and one three-hour lab per week. The course centers on the basic concepts and applications of Statistical Process Control (SPC). The course covers control charts, including setting scales, charting, interpreting, and analyzing process capability. Problem-solving techniques are

emphasized and laboratory exercises are linked to the implementation of SPC in the workplace.

QETE 236

Process Validation Three Credits

Three hours of lecture per week. The course covers validation approaches for characterizing processes, process intermediates and final products. Cost effectiveness is emphasized while determining what levels of validation are required for different phases of development and process improvement. The course includes topics such as validation of water systems, cleaning validation, computer systems validation, equipment validation and recent trends in process validation.

QETE 237

Industrial Regulations and Validations Four Credits

Five hours lecture per week. This course covers the study of current Good Manufacturing Practices (CGMP's) and the series of international quality standards known as ISO 9000 through 9004, ISO 10011, 10012, and ISO 14000. The validation for characterizing processes, process intermediates and final products. Cost effectiveness is emphasized while determining what levels of validation are required for different phases of development and process improvement also. The course also includes discussions of topics such as validation of water systems, cleaning validation, computer systems validation, equipment validation and recent trends in process validation.

QETE 238

GMP and ISO Standards Three Credits

Three hours of lecture per week. The course centers on the study of Good Manufacturing Practices (GMPs) and the series of international quality standards known as ISO 9000 through 9004, ISO 10011, 10012, and ISO 14000. Emphasis is placed on providing students with an understanding of documentation system for validation of equipment, utilities, analytical methods and processes in a medical manufacturing environment.

QETE 240

Quality Management Principles and Improvement Tools

Three Credits

This course focuses on the organizational goal of producing a quality product or service. Topics include the meaning and benefits of quality, the cost of quality, and problem-solving tools for continuous improvement. The course also includes an overview of quality philosophies, principles of quality, commitment to continuous improvement, customer focus

and paradigm shift, understanding process variation and employee involvement. Other topics discussed are quality tools that provide the basics for examining processes and systems and making data-based decisions to improve work processes and systems. The course covers the 7-step improvement process, including flow-charting, Pareto charts and cause and effect diagrams.

TCOM 300

Introduction to Telecommunications Four Credits

Three hours of lecture and one three-hour lab per week. Key concepts of telecommunications and networking. The course provides a solid introduction to networking fundamentals including key acronyms, protocols, and components that are essential to understanding how networks operate today. It covers the basic concepts of telecommunications such as analog/digital communications, basic encoding, bandwidth and capacity and serves as a foundation for in-depth study of networking. Upon completion, the participant will have a solid understanding of how information travels from a source computer to a destination computer across a complex network.

TCOM 320

Telecommunication and Data Networks Four Credits

Three hours of lecture and one three-hour lab per week. This course covers the key concepts of telecommunications and networking. It provides a solid introduction to networking fundamentals, including key acronyms, protocols, and components that are essential to understanding how networks operate today. It covers the basic concepts of telecommunications, such as analog/digital communications, basic encoding, bandwidth and capacity and serves as a solid foundation for in-depth study of networking. It identifies the types of communications networks that have evolved based on the various technological configurations and the internetworking process behind data communications. Upon completion of the course, the participant will have a solid understanding of how information travels from a computer to another computer across a network.

TCOM 330

Network Infrastructure Management Four Credits

Three hours of lecture and one 3- hour lab per week. This course concentrates on the Windows/2000 infrastructure management protocol, which is the largest in use on a global scale. Procedures for planning and servicing network infrastructure are discussed. The course covers areas such as protocols, services requiring calculation in the light of the organization needs, packet exchange and sequential packet

exchange IPX/SPX, integration with Novell NetWare, TCP/IP. NetBIOS, WINS, DHCP and DNS maintenance and configuration issues. Routing, remote access and VPNs are also covered from an infrastructure and management perspective.

TDBE 110

Technical Drawing and Blueprint Reading for Electricians

Two Credits

Four hours lecture - lab per week. This course introduces the student to terminology and applications used at different levels of the electricity industry. Students will review the basic drawing tools and then acquire skills in the development of views, plans and specifications. In addition, they will learn about the types of views in a set of construction drawings and produce clear explanations of their relationships with various electrical installations. The course offers comprehensive and applicable content in the field of electrical drawing.

The School of Health Sciences is the place where excellent health professionals are prepared. Our students are prepared to serve with high integrity and professional ethics, patients of all ages and different conditions in the health areas. With academic offers that cover all academic levels and a variety of educational areas, the School is positioned as the first option for studies in health in Puerto Rico and the Caribbean. The School offers a balanced and unique combination between the academy, research, and clinical services.

VISION

Being a school recognized for excellence in its academic programs, its specialized accreditations, their contributions to research, and high standards in community services framed within an entrepreneurship, interdisciplinary, and international perspective.

MISSION

The School of Health Sciences prepares professionals with specialized curriculums that are regulated by specialized accreditation agencies standards. Our graduates are entrepreneurs leaders committed to prevention, holistic health, and research; prepared to serve Puerto Rico and other countries and to perform their duties with strong ethical and moral principles from an interdisciplinary and global perspective.

OBJECTIVES

Our main objectives are:

1. To respond to the needs of health professionals in our catchment area.
2. To establish a continuous improvement system in our programs to ensure their relevance and applicability to our society.
3. To develop health professionals capable of working in Puerto Rico, as well as in other Spanish-speaking and English-speaking communities.
4. To contribute significantly to the development of students with high humanistic values.
5. To establish academic offerings with the participation of customers, students, health services providers, and accreditation agencies to ensure an effective professional practice that responds to the needs of the community.
6. To effectively implement technology integration in all of our programs.

7. To maximize the relevance of our academic offerings utilizing innovative strategies that will facilitate the transfer of knowledge to the practice of health professions and promote the acquisition of an integrated body of knowledge to be used in solving problems.
8. To establish local and international strategic alliances with health care institutions that can provide practice settings for faculty development and for exchange of resources in the areas of teaching and research.
9. To establish local and international alliances with other universities to increase our students' opportunities to participate in exchange programs that will broaden their vision of the health professional role.
10. To develop basic and applied research projects in the area of health, geared to the improvement of the quality of life in Puerto Rico and other communities.

GOALS

1. Respond to the health needs of our communities within a global perspective.
2. Provide an educational setting with balanced efforts among academic offerings, clinical services, and research endeavors.
3. Establish a system of continuous improvement in our programs to ensure their relevance and applicability.
4. Develop highly trained health professionals prepared to serve individuals and groups from diverse cultural, social and economical backgrounds.
5. Develop health professionals with high humanistic values.
6. Integrate technology in all of our administrative, academic, research and clinical activities.
7. Facilitate transference of scientific knowledge to the practice of the health professions.
8. Establish national and international alliances for faculty development, exchange of resources, and student exchange programs.
9. Foster a high degree of professionalism as health care providers within an interdisciplinary perspective.
10. Establish innovative programs prepared with the collaboration of community stakeholders, students, patients and accreditation agencies.
11. Promote an evidence-based practice setting.
12. Utilize service learning as the primary educational methodology for all academic programs.

SPECIALIZED ACCREDITATIONS

Speech-Language Pathology

Accredited by the Council on Academic Accreditation in Audiology and Speech-Language Pathology of the American Speech-Language-Hearing Association, 2200 Research Boulevard #310, Rockville, Maryland 20850, 800-498-2071 or 301-296-5700.

Nursing Programs: Graduate and Undergraduate

Accredited by the Commission on Collegiate Nursing Education (CCNE) from the American Association of Colleges of Nursing. One Dupont Circle, NW Suite 530 Washington, DC 20036.

Accreditation Council for Education in Nutrition and Dietetics

Nutrition and Dietetics

Accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) from the Academy of Nutrition and Dietetics. 120 South Riverside Plaza, Suite 2000 Chicago, Illinois 60606-6995.

Council on Naturopathic Medical Education (CNME)

Naturopathic Medicine

Authorized for a candidacy evaluation site visit by the Council on Naturopathic Medical Education (CNME). PO Box 178, Great Barrington, MA 01230.

Technology Veterinary

Initial accreditation by the AVMA Committee on Veterinary Technician Education and Activities (CVTEA) since 2018 (Main Campus)

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN VETERINARY TECHNOLOGY

Graduates of the program will be able to work as veterinary technicians to serve small and large animal hospitals, clinics, research facilities, educational institutions, animal shelters, and commercial, police and military facilities,. Our program emphasizes the development of professional and ethical attitudes, as well as interpersonal skills that should have all health professionals.

BACHELOR'S DEGREE IN FOOD AND NUTRITION MANAGEMENT

Upon completion of this innovative program, graduates will have acquired knowledge of nutrition concepts and leadership, managerial and entrepreneurship skills to compete in the work force in the food service sector or other nutrition related programs. Graduates will have a wide range of career opportunities such as food service managers or directors at hospitals, long term care facilities, schools, and corporate food service operations. Other opportunities include catering management, food marketing, distribution, and nutrition related programs in the private or public sector.

Objectives

1. Provide students with the opportunity to demonstrate knowledge of nutritional concepts to promote health and wellness among the general population.
2. Implement strategies to effectively manage and improve food service operations.
3. Develop managerial and entrepreneurship skills for successful self-employment.
4. Demonstrate knowledge of proper food procurement in large quantities including sustainable and safe practices.

BACHELOR'S DEGREE IN NURSING SCIENCES

This innovative nursing program with emphasis on community health promotion and interventions is the first program offered by the School of Health Sciences. It was especially designed for qualified students and registered nurses who aim to possess a bachelor's degree in nursing. Our graduates will be able to perform their professional nurse generalist role as providers of health care services in primary, secondary and tertiary settings.

Our students have the opportunity to practice in hospital and community settings within an interdisciplinary environment. Innovations and new technological advances are integrated into the training of future nurses according to the new skills and roles for holistic care. Our nursing program expects to provide the leadership and vision required for nursing in the 21st Century.

Objectives:

The students in the bachelor's degree program in nursing sciences will:

Develop critical thinking and problem-solving skills.

1. Integrate basic concepts of the behavioral, biological and natural sciences to better understand themselves and others.
2. Interpret and use scientific data in nursing interventions through collaborative research work.
3. Apply knowledge related to social politics, culture, economics and history in the analysis of society and social problems.
4. Communicate effectively in verbal and written forms in English and Spanish.
5. Develop healthy working relationships.
6. Understand, appreciate and respect cultural differences.
7. Understand the variables that affect the health of Hispanic populations.
8. Understand the nature of health professions.
9. Acquire and apply the technical skills necessary to offer excellent nursing care.
10. Integrate strategies for the promotion and maintenance of health, risk reduction and disease prevention across the lifespan.
11. Discuss the evolution and treatment of the disease process.
12. Integrate healthcare informatics into professional practice.

13. Develop ethical values that influence the decision-making process in nursing practice and inter-personal relationships.
14. Understand the environment and the organizations in which health services are provided.
15. Recognize the importance of continuing education and identify the values of the profession.
16. Recognize the importance of professional nursing associations in the establishment of public policy in healthcare and in professional improvement.

BACHELOR'S DEGREE IN NUTRITION AND DIETETICS

In response to the great need in Puerto Rico for professionals in the area of nutrition and dietetics, the School of Health Sciences at Universidad Ana G. Méndez-Recinto de Gurabo provides an integrated education through an undergraduate academic offering of a bachelor of science degree in nutrition and dietetics.

The Coordinated Program in Dietetics (CPD) provides the required nutrition and dietetics coursework and more than 1,200 hours of supervised practice within an academic program leading to a bachelor's degree. Graduates who successfully complete all course and supervised practice requirements will be eligible to take the national exam to become a Registered Dietitian as well as the Puerto Rico Board Exam.

Objectives

1. Prepare competent entry-level dietitians who can work in a variety of settings.
2. Develop professional dietitians committed to community service and interdisciplinary work.
3. Develop professionals capable of participating in nutrition and dietetic research-related activities.

Practice Settings

Students will be placed in a variety of supervised practice settings throughout the Island of Puerto Rico. Rotation placements are not limited to the geographic region surrounding Gurabo. Students are responsible for all costs related to the supervised practice including but not limited to medical examinations and vaccines, proof of medical insurance, housing and transportation.

BACHELOR'S DEGREE IN SPEECH LANGUAGE THERAPY

Our goal is to prepare speech-language therapy professionals with the knowledge, skills, and attitudes that are necessary to serve as therapists in the areas of counseling, prevention, and intervention of persons with communication impairments. The teaching/training process will be characterized by ample participation in the clinical processes, freedom to question and express ideas, and the principle of liberty of individuals' rights.

Objectives

The Program will accommodate for students' needs, interests, and abilities to accomplish the following objectives:

1. Contribute to the expansion of health services programs to respond the needs of Puerto Rican society.
2. Prepare students in the area of speech-language therapy to serve the needs of children and youths with speech, language, and hearing impairments.
3. Prepare a graduate to work effectively with other health team professionals for the well being of handicapped children and youths.
4. Promote a humanistic view in the provision of speech-language therapy services.
5. Promote among students the search for truth through the intense and scientific analysis of facts or of circumstances they will encounter in their professional life.
6. Prepare a graduate skilled in the use of technology as a therapeutic tool through a practice-clinic learning experience.

-------------------------	--------------------

BACHELOR'S DEGREE IN VETERINARY TECHNOLOGY

Graduates will apply knowledge and skills to the care and handling of small and large animals during clinical laboratory procedures, the management of illness, animal nutrition, pharmacology, parasitology, anesthesia and medical and surgical assistance of animals and to the prevention of diseases, hygiene, and cleanliness of the work area and to the management of a veterinary facility. Graduates of the program will be able to work as veterinary technologists with animals in veterinary hospitals, clinics, research facilities at the industry or the academy, at educational institutions, animal shelters, sanctuaries and commercial, police, and military facilities among other settings.

Objectives

1. Train in the student with the competences and methodologies to serve as a professional liaison between veterinarians, scientists and biomedical researchers and their clients.
2. Provide the student with the skills that guarantee an effective response in the support tasks that will be carried out as part of their professional responsibilities.
3. Provide the student with all the techniques, knowledge and experience to perform as a veterinary technologist in a variety of work settings.
4. Develop in the student the understanding of the managerial and organizational environment that frames the veterinary services.

BVET 410	Clinical Practice II	3

COURSE DESCRIPTIONS

(Courses marked with @ could be offered in both modalities, traditional or on-line.)

AVET 101 Veterinary Math

Three Credits

Review of basic math concepts that are carried out daily in the practice of the profession. The concepts of ratio and proportion, estimation and significant figures, as well as the method for augmentation and reduction of formulas, preparations, expressed to the percent, dilution and concentration are discussed. Emphasis on the International System of Units, the English System and equivalents that are used to convert between them. Basic mathematical operations are performed and their application to quantitative problem solving as part of the professional roles for the veterinary technician.

AVET 110 Introduction to Veterinary Sciences

Three Credits

In this course the roles and responsibilities of the veterinary technician and alternatives of study, work and professional organizations are described. It includes safety rules, ethics and laws that apply in the exercise of their profession and animal welfare in Puerto Rico. Also in this course medical terms and basics of the management of the veterinary hospital and veterinary clinics, as well as communication with clients and colleagues are described. Major breeds of domestic animals are identified and concepts of behavior, restraint, and security are defined. In addition, basic physical examination techniques, sampling and vaccination protocols are demonstrated.

AVET 120 Anatomy and Physiology of Domestic Animals

Four Credits

Histological, anatomical, and physiological study of the skeletal, muscular, epithelial, respiratory, cardiovascular, urinary, endocrine, nervous and immune systems. Emphasizes in the interrelation between the systems for normal body functioning. Studies the terminology related to anatomy and animal physiology. The course is modeled after the dog and compared with other domestic animals using skeletons, models, audiovisual dissection specimens and laboratory experiences.

AVET 120L
Anatomy and Physiology of Domestic Animals
Laboratory
Four Credits

Practical application of the concepts developed in the AVET 120 course. Anatomy and Physiology of Domestic Animals Laboratory is based on the study of comparative anatomy, using canine anatomy as a basis for comparison of anatomy of other animals. Live animals, small animal carcasses and preserved specimens will be used for the practice and teaching. The use and application of veterinary anatomical and physiological terms is emphasized.

AVET 130
Veterinary Nursing
Three Credits

Course that covers the care of small and large animals, of all ages, sick or healthy, in all the contexts and includes health promotion, disease prevention and care for sick animals. Issues related to medical and surgical nursing of small animals, equine and food animals are discussed.

AVET 221
Common Diseases and Parasitology in Domestic
Animals
Three Credits

This course exposes students to the pathophysiological processes of common infectious and non-infectious diseases. Relates the respective clinical symptoms with the main forms of diagnosis and therapy in large clinical scenarios. It will focus on practical concepts of immunity and prevention of infectious diseases in domestic animals, besides familiarizing students with the prevention and diagnosis of zoonotic diseases. A systematic study of the morphology, lifecycles and epidemiology of the main parasites, with emphasis on those affecting domestic and food animals is also presented.

AVET 230
Techniques and Protocols of Veterinary Technology I
Three Credits

The course presents the clinical laboratory techniques and procedures commonly use on hematology, urinalysis, clinical chemistry and veterinary cytology. It emphasizes the techniques and methods, rather than its interpretation. In addition, it reviews and summaries the quality control systems and the laboratory instrumentation needed for the analysis of clinical chemistries and hematology. Possible errors in the sample taking and handling that might complicate the interpretation of laboratory data are discussed. Anemia diagnostic tests and its treatment; as well as methods and tests for pregnancy diagnosis and ocular diagnostic test (including tonometry, fluorescein stains and tear production tests- Schirmer tear test) are discussed, too.

AVET 230L
Techniques and Protocols of Veterinary Technology
Laboratory I
Three Credits

Practical application of the concepts developed in the AVET 230 course. The course presents the techniques and clinical laboratory procedures commonly used in hematology, urinalysis, clinical chemistry and veterinary cytology. Techniques and methods for the evaluation of samples are emphasized, and analysis of results interpretation. Quality control systems and laboratory instrumentation required for the analysis of clinical chemistry and hematology are summarized and reviewed. Possible errors in the taking and handling of samples that may complicate the interpretation of laboratory data are discussed. Also, pregnancy and ocular diagnostic tests are presented (including tonometry, fluorescein staining, and tear production test - Schirmer tear test).

AVET 231
Techniques and Protocols of Veterinary Technology II
Three Credits

Course with a broad content in which issues related to neonatal and geriatric pet care, emergency nursing, anesthesia and toxicology protocols are discussed. A broad view of issues relating to euthanasia and necropsy is also presented. In addition, the handling of exotic species and small mammals is reviewed and emphasis is made on the study of laboratory animal diseases and medicine.

AVET 231L
Techniques and Protocols of Veterinary Technology
Laboratory II
Three Credits

Practical application of the concepts developed in the AVET 231 course. Discussion and application of techniques and protocols for medical emergencies, poisonings, intensive care, and basic necropsy techniques and procedures. Presentation and demonstration of effective and safe patient management in all phases of anesthetic procedures, including the handling of laboratory animals, exotic birds, and small mammals. Integration of simulators and live and dead animals to enhance the ability and skill in veterinary technology techniques.

AVET 240
Animal Pharmacology and Toxicology
Three Credits

This course provides students the opportunity to develop critical thinking concepts related to pharmacology applied to veterinary medicine. Describes the pharmacological principles of prescription drugs in the field of veterinary medicine. Students will understand the veterinary products and the latest drug developments. Trains the student in the

various techniques of drug administration and dosage for patients in veterinary care.

AVET 245

Basic Radiology in Domestic Animals

Three Credits

This course relates the student with the basics of radiological sciences and their usefulness in the field of veterinary medicine. The students become related to terminology and develop the skills to produce a diagnostic quality radiographic image. Radiation safety topics are discussed.

AVET 245L

Basic Radiology in Domestic Animals Laboratory

Three Credits

Practical application of the concepts developed in the AVET 245 course. This course relates the student with the basic concepts of the radiological sciences and their usefulness in the field of veterinary medicine. The student will develop the skills needed to produce a diagnostic quality radiographic image and will apply the recommended radiation safety rules.

AVET 250

Grooming and Veterinary Psychology

Three Credits

Description of the domestic animal characteristics and their respective grooming styles for the most common breeds. Discussion of the different ways of categorizing domestic animals (size, colour, characteristics, coat type). Review of grooming subjects including equipment, techniques, cares, preparation, bath, drying and clipping.

AVET 260

Management, Practice and Farm Animal Disease

Three Credits

This course discusses the husbandry of farm animals including breeds, behavior, reproduction, nutrition and restraint. It discusses the best practices for proper management of farm animals. Demonstrates medical and surgical nursing for large species. It also discusses techniques in necropsy, dentistry and assisted reproduction for farm animals.

BVET 310

Veterinary Anesthesiology and Surgical Assisting

Three Credits

The course will focus on the clinical skills necessary for safe and effective anesthesia and surgery of companion animal patients (dogs and cats). Discussion about intravenous catheter placement, proper endotracheal intubation, patient and surgical site preparation, and patient monitoring under general anesthesia. Also, will be covered the use and side effects of sedatives, analgesics and anesthetics.

BVET 310L

Veterinary Anesthesiology and Surgical Assisting Laboratory

Three Credits

Practical course in which the concepts related to the clinical skills needed for the safe and effective administration of anesthesia on companion animals (dogs and cats) surgery are applied. Emphasis is made on the identification and use of general and orthopedic surgery instruments and components of the anesthesia machine, intravenous catheterization, surgery room, staff and patient preparation, and assistance in the performing of common surgical procedures in a small animal veterinary clinic. This course will represent 25% of the BVET 310 course grade, which will be taken concurrently.

BVET 350

Veterinary Dentistry for Veterinary Technicians

Three Credits

Study of dental anatomy, common dental disease, basic dental procedures and equipment and instruments most used as part of the veterinary dentistry for veterinary technicians. Topics will include dental charting, routine periodontal care, anesthesia, patient monitoring, analgesia, post-operating cares, and home care.

BVET 350L

Veterinary Dentistry Laboratory for Veterinary Technicians

Three Credits

Practical course in which are applied the concepts related to the role of the veterinary technologist in the handling of veterinary dentistry cases. Emphasis is made on the identification and maintenance of commonly used dental instruments and equipment, the monitoring of the anesthetized patient and the performance of common dental procedures in veterinary practice. This course will represent 25% of the BVET 350 course grade, which will be taken concurrently.

BVET 360

Animal Nutrition

Three Credits

Discussion of basic concepts of animal nutrition and feeding. Topics included are: anatomy and physiology of digestive system in ruminants, avians, rabbits, equines and companion animals. It will be described the digestion, absorption and utilization of nutrients. In addition, the students will learn about problems caused by nutrient deficiencies and common metabolic disorders in animals. Also will be discussed methods of feedstuff evaluation and formulation of basic rations for animals.

BVET 370**Veterinary Office Management Fundamentals****Three Credits**

Study about the management of veterinary offices and veterinary service facilities. Emphasis is placed on office management and procedures, client relations, taking patient histories, medical records maintenance, pet nutrition and behavior counseling, medical emergency management, euthanasia and bereavement.

BVET 380**Critical Care and Veterinary Emergency Fundamentals****Three Credits**

Discussion of the theoretical and practical aspects of assisting the veterinarian in the management of medical and traumatic emergencies, the recognition and assessment of cardiovascular shock, respiratory crisis, gastrointestinal emergency, musculoskeletal trauma, the principles and techniques of fluid therapy and administration of emergency drugs. Also, this course presents themes related to the application of treatment protocols for shock, cardiopulmonary arrest, gastrointestinal crisis, wounds and fractures, toxicoses, and dystocia, as well as the nutrition of critical care patients, and maintenance of emergency medical equipment and supplies.

BVET 380L**Critical Care and Veterinary Emergency Fundamentals Laboratory****Three Credits**

Practical course in which the concepts related to the management of medical and traumatic emergencies, the recognition and evaluation of cardiovascular shock, respiratory arrest, gastrointestinal emergencies, musculoskeletal traumas, principles and techniques of fluid therapy and emergency drug administration are applied. Emphasis is made on the identification and use of drugs, the required equipment and the techniques commonly used to handle a veterinary emergency. Anatomical models will be used to simulate some situations. This course will represent 25% of the BVET 380 course grade, which will be taken concurrently.

BVET 385**Veterinary Nursing in Alternate Medicine****Three Credits**

Study of principles and basic concepts of veterinary nursing in the modalities of alternative medicine. Discussion of the following alternative and complementary modalities: herbal medicine, homeopathy, homotoxicology and flower essence, applied kinesiology and acupuncture. Also, the discussion will include physical modalities such as chiropractic, massage, rehabilitation and miscellaneous therapies, applied to veterinary nursing.

BVET 390**Integrative Seminar****Three Credits**

Review of the content of the veterinary technician/technologist occupation related courses for integration of learning concepts. Discussion of the minimum skills required to practice in a variety of situations safely and effectively. Prepares students to take their professional board test.

BVET 400**Clinical Practice I****Three Credits**

This course and lab integrate the acquired knowledge by placing students in practice ruled centers. Students will be working directly with a veterinarian and/or a licensed veterinary technologist, executing the procedures requested and needed to diagnose and treat small animals. Students will be monitored and evaluated in carrying out their duties as future veterinary technicians. The veterinarian and/or veterinary technologist will be serving as a supervisors, counselors and advisors. The clinical portion of the course will consist of a total of 120 hours.

BVET 410**Clinical Practice II****Three Credits**

This course and lab integrate the knowledge acquired by placing students in practice ruled centers. Students will be working directly with a licensed veterinarian and/or veterinary technologist, executing the procedures requested and needed to diagnose and treat farm animals. They will be monitored and evaluated in carrying out their duties as future veterinary technicians/technologists. The veterinarian and/or veterinary technologist will be serving as supervisors, counselors and advisors. The clinical portion of the course will consist of a total of 120 hours.

FSHS 105

Freshman Seminar in Health Sciences

Three Credits

The course focuses on strengthening basic knowledge and skills at the personal, intellectual and technological level necessary to succeed in academic activities, performance, and adjustment to university life. Each student will participate in mentorship activities that will continually build upon skills and knowledge base in the advancement of student development. Important emphasis is given to the integral development of humanistic fulfillment and academic success. Students are guided through a series of activities on the university campus, exposing them to services offered by the institution and the School of Health Sciences. The goal is to instill in students feelings of security and confidence in managing and solving personal and academic situations.

HESC 340

Health Sciences Research

Three Credits

This is a required core course for undergraduate students at the School of Health Sciences. Specific attention is given to the relationship between research outcomes and clinical practice. The course prepares students to analyze research literature in the health sciences critically. Students also have the opportunity to apply the scientific method to clinical research. Funding opportunities available to develop research studies in health sciences are presented and discussed.

HESC 350

Reconceptualizing Aging

Three Credits

This course is directed to undergraduate students who are interested in developing, strengthening and expanding their knowledge, attitudes and skills in the care of the older adult, and who also need to develop interdisciplinary work skills. The course is intended to serve as an elective for undergraduate programs in the health and behavioral sciences, which are disciplines that focus on the care and services to older adults, regardless of the clinical setting. These disciplines also, have direct contact with these older clients as a response to the nature of their professional services. Students will have the opportunity to clarify myths and stereotypes about aging, gain a new vision of the aging concept and become familiar with the socio-demographic profile of the elderly. The course also discusses social, biological and psychological changes in aging, their impact on services to the elderly and the uniqueness of older persons. The most prevalent conditions and problems that affect the functional status and fundamental concepts of interdisciplinary teamwork will be also addressed. Students will have the opportunity to interview older adults in the

home setting to estimate their functional status and carry out perform interdisciplinary teamwork.

HESC 360

Statistic Applied to Health Sciences

Three Credits

This is the third required core course for all students completing BS studies at the School of Health Sciences, with the exception of students of Speech Language Therapy and Dietetics and Nutrition, who are encouraged to take the course as an elective. The course provides a discussion of statistical methods applied to the health professions. In this course students expand on the knowledge introduced in HESC 340, Health Sciences Research. Emphasis is placed on qualitative and quantitative statistical analyses applied to clinical research, according to different research designs.

HESC 365 @

Health Sciences Research

Three Credits

This core course is required for undergraduate students at the School of Health Sciences. Specific attention is given to the relationship between research outcomes and clinical practice. This course prepares students to analyze research literature in the health sciences critically. Students also have the opportunity to apply the scientific method to clinical research. Funding opportunities available to develop research studies in health sciences are presented and discussed.

HESC 370

Transcultural Nursing

Three Credits

This course is offered at the undergraduate level to apply a transcultural nursing framework to guide nursing practice in diverse health care settings across the lifespan. Considering that nursing care requires effective communication skills, as well as a clear understanding of the cultural beliefs and preferences of clients, students are introduced to the development of cultural assessment skills. These, combined with critical thinking and decision-making abilities based on cultural knowledge, will provide the necessary competence on which to base transcultural nursing care. Using this approach, nurses will be able to provide culturally competent and contextually relevant care for clients-individuals, families, groups, communities, and institutions.

ICSE 360**Services in the Natural Environment and the Inclusion in Child Care and Pre-School Centers
Three Credits**

This course is oriented toward the development of competencies in the provision of services for infants and toddlers in their natural environment. The course includes discussions of the design and implementation of services for infants and toddlers, their families and caregivers through a relation of empowerment, capacitation and collaboration between the service provider, the family and the community.

ICSE 380**Facilitating the Participation, Learning and Development through Assistive Technology
Three Credits**

This course is designed to provide students the of basic skills in the use of the assistive technology. Students will acquire skills in the development of activities and strategies to promote the provision of equipment, adaptations, modifications and services that encourage the active participation, learning and development of infants and toddlers in their natural environment.

ICSE 390**Family Centered Services, Assessment and Service Planning
Three Credits**

The course centers on the recognition of the family as the major influence in the life of the infant/toddler. Emphasis is placed on strengths and needs. Respect of differences are essential components that will be discussed in this course. Students will knowledge in the course theories of family development, working with families and support strategies in the identification, implementation and evaluation of the outcomes.

ICSE 400**Practical Intervention Experience in the Field of Early Intervention
Three Credits**

This course is designed for students to practice the skills learned in the courses taken previously. Students will complete 30 hours of practical field intervention experiences (10 hours per credit). They will be provided with field experiences in natural environments and opportunities to participate in the identification, assessment, planning and service processes.

MSNT 540**Nutritional Problems; a global perspective
Three Credits**

The course will focus on nutrition issues and problems related to global health inequality. Students will explore the

nature and extent of global inequalities, in health and nutrition, as well as the implications of the health crisis that afflicts countries, Special attention will be given to problems such as food habits, malnutrition and food security. Discussio of ways to improve health and well-being to reduce observed disparities will also be included.

NURS 200**Introduction to Nursing: A New Community
Three Credits**

The focus of this course is to increase awareness of the nurse role as a professional in the community at large, the realities of the profession and opportunities it represents. This course emphasizes the basic concepts of nursing, health and illness, as well as the emotional, spiritual, psychosocial and physiological components of the human being. Students will participate in two nursing workshops related to basic procedures in addition becoming familiar with instruments and equipment in the skills laboratory. Through a series of activities the students are exposed to university life including aspects of the cultural and professional life of nurses.

NURS 201**Fundamentals of Nursing
Five Credits**

This theoretical and clinical course provides an introduction to the historical, sociopolitical, and legal concepts of the nursing profession in the U.S., Puerto Rico, and in other Hispanic communities. Emphasis is placed on the development of basic nursing skills, which are needed for promotion of health and maintenance of individuals, families and communities. The student is guided to consider the individual's motivation in seeking health care and how these problems interfere with the person's daily activities. Clinical practice provides opportunities for development of the skills needed in hospital and community settings to carry out the nursing role. Emphasis is placed on the client as a holistic being and on the use of critical thinking when intervening in health and illness with a variety of individuals from different cultural/social backgrounds and age groups.

NURS 202**Health and Physical Assessment
Four Credits**

This course focuses on concepts of health promotion and disease prevention in conducting physical examinations and health assessments. Multidisciplinary and interdisciplinary collaboration, cultural competence, and professional interpersonal skills are modeled in order to achieve the goals of Healthy People 2010. Practice in the skills laboratory provides an opportunity for the students to examine and implement the nursing process with individuals, families and communities throughout the life span health care as consumers and resources. The nursing diagnosis process, health screening, the referrals process, and physical

examination techniques are discussed, applied, and practiced in laboratory experiences.

NURS 203
Pharmacology
Four Credits

This course presents students with the opportunity to develop critical thinking related to pharmacology concepts applied to the nursing process. The content focuses on principles of pharmacology, drug classifications, administration routes, dosage calculations, therapeutic use, disinfection procedures, basic concepts of nontraditional medicine and drug interactions. Advantages and disadvantages of pharmacotherapy and the patient's well-being are discussed. In addition, the course includes content on bioterrorism agents, drugs for HIV/AIDS, medication errors and gene therapy.

NURS 204
Technical Skills Laboratory
Two Credits

This course develops student's the basic technical nursing skills required at the baccalaureate level. Students are expected to assess the client, formulate nursing diagnoses, perform different nursing procedures, evaluate patient outcomes, and document pertinent data following NANDA, NIC and NOC.

NURS 205
Pathophysiology
Three Credits

This course presents the basic concepts of human pathophysiology and explains the processes of specific diseases. The course is divided in two parts: the microsystem and the macrosystem. Part one reviews cellular responses to infection, environmental factors, genetics, diet, cancer, and stress. Part two is organized by body systems. Students are expected to have a basic knowledge of microbiology, chemistry, anatomy and physiology. Relevant case studies are discussed in class, and aspects such as risk factors pertinent to pediatrics, aging and women's health are presented.

NURS 209 @
Nutrition Essentials for Nursing Practice
Three Credits

This is a course offered to undergraduate nursing students (BSN) as an elective option. The course is designed to fill the need for clinical nutrition education for nursing students. It includes discussions of the fundamentals of nutritional care including nutritional assessment, identifying risk factors, determining nutrient requirements, and selecting appropriate interventions. Life cycle nutrition, functional elements of nutrition support, trends in nutritional care, and

nutritional considerations in specific disease states are also covered.

NURS 210
Nursing Informatics
Three Credits

This course assists students developing basic competencies in the use of computers, data management software, patient care technologies, electronic communication, and data gathering devices to deliver quality patient care. Issues and policies related to ethics and privacy regarding the treatment of patient information (HIPAA.) The impact of computing as it relates to data, technology, privacy, security and systems are also addressed.

NURS 212
Nursing Care of The Older Adult
Three Credits

This course focuses on the care of the older adult. It prepares undergraduate students to provide holistic, professional nursing care. Common problems in geriatric syndromes and their impact on the functional status of older adults are discussed, as well as effective strategies for care by interdisciplinary teams. The focus is primarily on functional assessment, effective communication and nursing interventions to foster functionality and manage risk during the aging process.

NURS 301
Community Health I
Three Credits

In this course the student examines concepts related to the community, such as characteristics and development of the resources available to the social group. The community's physical and social environment is analyzed, including industries, organizations, schools, and health services. Emphasis is placed on leadership rights of members through active participation in the decision-making activities for the wellness of the population. Political issues and their influence on health policies are examined.

NURS 302
Community Health II
Three Credits

This is a second course examining aspects of community interventions. In this course students are exposed to specific knowledge needed for appropriate interventions as nurse generalists in community settings. Students also have the opportunity to gain skills for interventions with individuals, families and other community groups.

NURS 303**Medical Surgical Nursing****Five Credits**

This theoretical and clinical course prepares students to intervene with adult and elderly individuals who exhibit physiological alterations affecting their homeostasis. The focus is on the development of knowledge based on application of the nursing process, communication skills, critical thinking and therapeutic interventions, as essential to ensuring optimal care. The course includes theory, nursing skills laboratory, clinical experiences (hospitals and communities), and seminars. The hospitals used for clinical practice are at the secondary and tertiary levels of care.

NURS 304**Maternal and Child Nursing****Five Credits**

This theoretical and clinical course focuses on concepts of the childbearing patient, her infant and the impact on her family. The nursing process is presented as a guide for intervention with families during the normal human development process including: pregnancy, delivery, post partum, and care of the newborn. Health promotion is emphasized. Epidemiology, infectious, acute, and chronic diseases are discussed from a biopsychosocial perspective, taking into consideration maternal and newborn needs in community and hospital care settings. At the beginning of the course, specific maternal and childcare skills are practiced in a nursing skills laboratory. After this practice, students participate in different experiences within the clinical setting.

NURS 305**Nursing Care of Children and Adolescents****Five Credits**

This theoretical and clinical course focuses on the care of children and adolescents. The student is introduced to the concepts of nursing care from the first year of life through adolescence. Basic nursing skills are developed for the prevention of illness, health promotion, and health maintenance in this age group. Emphasis is placed on the client as a holistic being, on applying critical thinking, and on promoting the use of nursing diagnosis according to the North American Nursing Diagnosis Association (NANDA), with nursing interventions (NIC) and outcomes (NOC) adequate to this age group.

NURS 321**Primary Health I****Six Credits**

The course centers on the assessment of predictive factors of illness, analyzing the lifestyles, and nutritional factors that influence the levels of care in diverse community groups. Genetic and biosocial risks are considered. Proactive strategies for health promotion and illness reduction are

discussed. The individual's health history and assessment are considered as essential to set achievable goals for intervention.

NURS 322**Primary Health II****Six Credits**

The course centers on the implementation of risk reduction strategies applicable to individuals and groups. The course also incorporates knowledge and skills for the promotion, maintenance and prevention of illness throughout the developmental stages and the evolution of the life cycle. Emphasis is given to the importance of establishing community coalitions to identify and implement goals for quality of life, taking into consideration the difference in cultures, the concepts of health, and the political effects, within the provisions of health services systems.

NURS 401**Management of Normal, Acute & Chronic Crises Throughout the Life Span I****Five Credits**

The nursing process constitutes a basic guide for intervention with families during the normal human development process, which includes pregnancy, delivery, postpartum and care of the child until adolescence. Health promotion is emphasized. Epidemiology and infections, as well as acute and chronic diseases are discussed from a biopsychosocial perspective, as are maternal and child needs in community and hospital care settings. This course offers clinical experiences and theoretical content. At the beginning of the course, specific maternal and childcare skills are practiced in a nursing skills laboratory.

NURS 402**Management of Normal, Acute & Chronic Crisis Throughout the Life Span II****Five Credits**

This course prepares the student to manage adult and elderly populations with physiological alterations. Emphasis is placed on development of knowledge, based on application of the nursing process, communication skills, critical thinking, and therapeutic interventions essential to ensure optimal care. This course includes theory, nursing skills laboratory practice, clinical experiences (hospital and community), and seminars.

NURS 403**Community Health Nursing****Five Credits**

This theoretical and clinical course focuses on the study of principles and practices involved in community health nursing and the development of skills for health education in community settings. Students are familiarized with models, theories, concepts and skills related to community

interventions. Public Health concepts are discussed and applied to the health improvement of different communities. Community physical and social environments are analyzed, including the role of the different organizations. Emphasis is given to priorities for health promotion and maintenance according to Healthy People 2010, including health disparities and the essential role of the nursing professional.

NURS 404
Mental Health Nursing
Five Credits

The focus of this theoretical and clinical course is the promotion of health and provision of opportunities for clients to maximize their ability to live, work, socialize, and learn in the communities of their choice. The practice of mental health nursing is presented from the perspective of helping people manage difficulties, solve problems, decrease emotional pain, and promote growth, while respecting their rights to their own values, beliefs and decisions. Nursing students are encouraged to engage in self-analysis in order to increase their understanding and self-acceptance. This is important because nurses who are able to clarify their own beliefs and values are less likely to be judgmental or to impose their own values and beliefs on clients. Neurobiological, psychosocial, sociological, and spiritual theories are discussed, to help students understand clients and their experiences and to help them engage in the healing process. Emphasis is given to development of effective communications skills, application of the nursing process, community mental health, critical thinking and cultural diversity.

NURS 405
Nursing Leadership
Three Credits

The focus of this course is on the basic concepts of effective nursing leadership and management within today's dynamic health care system, where nursing roles are evolving. The impact of economics, information, technology, and politics on the health care system is discussed and analyzed. Problems and challenges are viewed as opportunities for growth and improvement for the health care team where nursing plays a key role. The student has the opportunity to critically analyze case studies in various health care settings. A variety of concepts and theories from research and literature are analyzed and applied to practice. Participation in local, national, and international nursing and non-nursing organizations is encouraged.

NURS 406
Practicum
Four Credits

In this course the student has the opportunity to integrate knowledge from previous courses with the purpose of promoting professional attitudes, internal motivation, development of responsibility, and accountability for practice. Emphasis is placed on the development of skills in the clinical area selected by the student in agreement with the professor. The goal is to increase clinical skills and apply critical thinking, using nursing diagnoses according to the North American Nursing Diagnosis Association (NANDA, NIC and NOC). In addition, students have the opportunity to practice the employer-employee relationship and leadership skills. In addition to the clinical experiences, the group meets once a week for two hours to discuss issues relevant to this stage of their professional development.

NURS 407
Knowledge Integration in Nursing
Three Credits

The focus of this course is integration of knowledge in preparation for local and/or national professional examination tests. Students have the opportunity to become familiar with the requirements for practicing the nursing profession in Puerto Rico and the National Council Licensure Examination (NCLEX). In addition, students will review and practice the basic components included in the examination test required by the Department of Health to practice the profession of Nursing and the NCLEX.

NURS 421
Interdisciplinary Seminar I
Six Credits

The course centers on experience in diverse health settings. Training is provided within the interdisciplinary health team that provides healthcare in a hospital setting. Emphasis is placed on managed care and advanced nursing practice, as well as on evaluation of the services being offered to meet health needs. Students apply the nursing process to individuals in acute care, those with chronic illnesses, and patients with terminal illnesses. The course includes technology of updated information related to clinical nursing.

NURS 422
Interdisciplinary Seminar II
Six Credits

The course allows students to apply critical thinking in the process of problem solving and to offer alternatives for health problems in the community, by means of an interdisciplinary healthcare team. Concepts of environmental health, epidemiology, empowerment, and nursing process are emphasized. The community setting is

utilized, with intensive practice in the application of the nursing process.

NUTR 201

Introductory Nutrition

Three Credits

The course covers fundamentals of nutrition, such as the study of food nutrients, digestion, absorption, metabolism, and excretion. Problems associated with deficiency and excess are discussed. Students will have the opportunity to evaluate their food intake in terms of caloric content, and nutrients, and compare it with the established recommendations for individual needs.

NUTR 202

Food Science

Three Credits

The course centers on evaluation of chemical, physical, functional and nutritional changes in food. Topics include evaluation of changes that take place during selection, preparation, processing, and storage of food, with attention given to the quality and retention of nutrients. The course includes an experimental laboratory with techniques to examine the chemical and physical properties in food. The necessary characteristics of food preparation and conservation of nutrients are determined, including adequate food appearance.

NUTR 203

Nutrigenomics-Nutrigenetics

Three Credits

Students will discuss the effects of ingested nutrients and other food components on gene expression and gene regulation. They will also have the opportunity to identify human genetic variations that are the cause of differences in phenotypic responses to diets.

NUTR 204

Vegetarian Nutrition

Two Credits

The course covers the theory and basic concepts of vegetarian nutrition. Topics include the need for essential nutrients and the health consequences in humans following a vegetarian diet. Emphasis is given to trends in the use of vegetarian diets, fallacies, and risk factors. Topics include composition, planning, and selection of vegetarian nutrition and how to satisfy body needs at different stages of life.

NUTR 205

Nutrition in Sports and Exercise

Two Credits

The course covers basic concepts of the interaction of nutrition, sports and exercise. Emphasis is given to the athlete, his/her physical condition, nutritional needs, and other specific needs.

NUTR 206

Nutrition in Alternative-Complementary Medicine

Two Credits

The course covers theory, culture, and application of alternative-complementary medicine in nutrition. Experiences are directed towards obtaining knowledge about the use of herbs. A scientific base is provided by, utilizing and analyzing available literature and by identifying the most commonly used herbs with their generic and common names.

NUTR 305

Socio-Cultural Aspects in Nutrition

Two Credits

The course explores and analyzes socio-cultural factors associated with the decision-making process related to food intake and its effects on individual nutrition and health. Students will have the opportunity to evaluate controversies related to food and its effects on nutrition. The purpose is the formation of professionals who can participate in public policy related to food and nutrition in Puerto Rico.

NUTR 310

Food Service System Management

Three Credits

The course covers principles of marketing, financial management, and human resources applied to food service facilities. Topics include discussion of hypothetical situations for analysis and recommendations. Food services laws and regulations at the national and international levels are also discussed. Emphasis is given to leadership skills and the skills needed to influence change and improve quality.

NUTR 320

Food Service Facility Design and Equipment

Three Credits

This course centers on the importance of appropriate planning in food service facility settings. Topics include discussion of elements in the design, maintenance and operation of institutional equipment, safety, and sanitation to ensure quality of services. Students will have the opportunity to visit food service facilities and view the institutional equipment used.

NUTR 321

Institutional Menu-Planning

Three Credits

The course centers on theory, techniques, and practice in the design, preparation, analysis and servicing of an institutional menu. The course also provides experience in basic administration of food servicing which provide nutritional meals adequate to the served population. These experiences are focused on the following: knowledge and skills of time and money management, costs per recipe,

recipe standardization, portion control, food preparation, and meal management. Recent studies, trends in the food industry, consumer patterns, and general population patterns are discussed. Computer programs are included as part of the experiences in menu design and analysis.

NUTR 403

Advanced Nutrition and Metabolism

Three Credits

The course centers on evaluation of the biochemical and physiological aspects that interact in the utilization of nutrients by the human body. Health problems associated with nutritional excess or deficiencies, such as obesity, anemia, osteoporosis, and other nutritional disorders are examined.

NUTR 405

Nutrition Throughout The Life Cycle

Three Credits

This course studies the physiological and developmental changes throughout the stages of the life cycle of humans and the nutritional needs related to those stages. Psychosocial and environmental conditions that impact nutrition status at each stage of life are also examined.

NUTR 420

Nutritional Assessment

Two Credits

This course includes in-depth study of nutritional analysis methods, including dietary intake, as well as anthropometric, biochemical, and clinical measures. Students have the opportunity to practice nutritional analysis methods at individual and family levels. Students are also exposed to nutritional evaluation studies.

NUTR 425

Community Nutrition

Three Credits

The course analyzes the predominant health problems in Puerto Rico and other cultures, such as the USA. The students will become familiarized with important epidemiologic studies and government initiatives in response to the current nutritional situation and related services at public and private levels. Special attention will be given to the development and impact of government public policy in the field of nutrition. Students have at least one community field experience; the course includes a special project.

NUTR 430

Senior Professional Development Seminar

Three Credits

This course provides students with the necessary tools to assist them in the transition from the academic to the professional workplace setting. Emphasis will be placed in professionalism in the search for employment and in the workplace. Experiential learning activities will be coordinated by the professor and may include observations, shadowing or field trips.

NUTR 435

Educational Strategies in Nutrition

Two Credits

The course covers social aspects that interact with the acquisition of alimentary patterns. Students analyze the human behavior theories most utilized in the nutrition field and their application to nutritional counseling. The course also explores different educational strategies in nutrition, including communication techniques through mass media, group teaching, and individual teaching. The student will plan, practice and apply this knowledge during educational activities related with nutrition.

NUTR 436

Food Service Supervised Practice Experience

N/A Credits

The course covers the application of theory, functions and principles of management through supervised practice in healthcare facilities. Emphasis is placed on personnel and financial management, problem analysis, and quality assurance.

NUTR 438

Weight Management

Three Credits

This course is designed to present the scientific principles of weight management with an emphasis on lifestyle modification for improving health. The content includes the discussion of the trends of obesity, risk factors associated with being overweight, and chronic disease patterns. Also, the course includes the discussion of strategies for proper weight management and strategies used to assist in reversing the obesity epidemic.

NUTR 440

Medical Nutrition Therapy I

Three Credits

This course covers the use of nutrition as a component of treating disease. Relevant biochemistry and physiology are integrated into a medical nutrition therapy plan. The course is organized by body organ system and disease. Topics covered from a medical nutritional perspective include acid

base, fluid and electrolyte balance; renal, cardiovascular, gastrointestinal, hepatic, and pancreatic diseases. Special nutrition therapies are discussed. The course also introduces students to nutritional genomics, food-drug interactions, enteral and parenteral support, and medical terminology. Material is illustrated by case studies.

NUTR 441

Medical Nutrition Therapy II

Three Credits

This course continues covering the use of nutrition as a component of treating disease. Relevant biochemistry and physiology are integrated into a medical nutrition therapy plan. The course is organized by body organ system and disease. Topics covered from a medical nutritional perspective include acid base, fluid and electrolyte balance; renal, cardiovascular, gastrointestinal hepatic, pancreatic diseases. Special nutrition therapies are discussed. Material is illustrated by case studies.

NUTR 442

Medical Nutrition Therapy Supervised Practice

Experience

N/A Credits

The course covers the application of principles of clinical nutrition in specific disease conditions during supervised practice in healthcare facilities.

NUTR 450

Community Practice Supervised Experience

N/A Credits

This course provides experiences that include nutrition assessment, counseling, and delivery of nutrition services to the community.

NUTR 451

Nutritional Research Methods

Two Credits

This course presents the principal methods of human nutrition research, and focuses on the role of the nutritionist as part of a research team. Qualitative and quantitative research, research ethics, quality control, selection of dietary assessment methodology, and sources of funding are discussed. A research study is conducted as part of this course and results are shared with other students and faculty members. The students will have the opportunity to analyze research articles from well-recognized journals in the area of nutrition.

NUTR 455

Integration Seminar and Fundamental Aspects in the Nutrition-Dietetics Profession

Three Credits

The course covers the requirements to practice the profession of dietetics in Puerto Rico. It includes review and practice of the basic components included in the examination test required by the Department of Health and Commission on Dietetic Registration to practice the profession of Nutritionist and Dietitian. The course also includes an introduction to careers in nutrition, dietetics, and food service administration, job responsibilities; interests, abilities, skills, education and experience required for the job; and job market for similar positions.

NUTR 460

Purchasing and Preparation of Quantity Food Service

Three Credits

The course centers on manager/supervisor responsibilities for food purchasing and preparation in large quantity food service systems. The course includes planning, purchasing, preparation, and service of nutritionally balanced, safe meals, in accordance with established budgets. Time to practice the concepts learned in class will be provided.

NUTR 460L

Purchasing and Preparation of Quantity Food Service Lab

One Credits

This laboratory course is designed to allow students to practice the concepts learned in NUTR 460 Purchasing and Preparation of Quantity Food Service. The laboratory experience will allow students to evaluate quality of products, participate in a mock formal bidding process, write specifications and practice calculations used in the purchasing and preparation processes.

PHAR 100

Pharmacology

Two Credits

The course presents introductory concepts related to pharmacology, including administration routes, therapeutic use, aseptic procedures, basic concepts of non-traditional medicine, and drug interactions. The course also provides students with the opportunity to increase their knowledge related to advantages and disadvantages of pharmacotherapy treatment in overall human wellbeing.

SPTH 202
Introduction to Professions in Communication
Sciences and Disorders
Three Credits

This course provides basic information to students considering a career in the professions of Speech-Language Therapy, Speech-Language Pathology or Audiology. This course will describe the scope of practice of the professions of Speech-Language Therapy, Speech-Language Pathology or Audiology according to the applicable laws and codes of ethics. A general vision is presented of communication disorder areas as they occur across the lifespan and in relation to different etiologies. Fundamental elements are discussed regarding service delivery, including ethical, clinical, and administrative aspects. Characteristics of communication disorders are discussed, with particular emphasis on the impact to individuals and their families.

SPTH 205
Anatomy and Physiology of Speech and Language
Three Credits

The course centers on the study of primary and secondary functions of human body structures involved in the reception and production of language and speech. Normal and abnormal anatomy and physiology will be studied. The impact on speech, language, and communication of abnormal body structures and their functioning will be analyzed.

SPTH 255
Language Development: Normal and Pathological
Processes
Three Credits

Through the course the student will participate in interactive experiences with infants, children and adolescents with and without language disorders. Language development from the first words through adolescence will be covered and simultaneously contrasted with pathological indicators. Controlled laboratory experiences will be offered including the management of didactic materials.

SPTH 257
Intervention with Infants and Children with
Auditory Dysfunction
Three Credits

The course centers on the study of key clinical aspects for the delivery of aural habilitative and rehabilitative services to infants and children with hearing loss. The different types of hearing loss diagnosed in infants and in regular and special education students will be discussed. Strategies and methods for aural habilitation and auditory training will be discussed.

SPTH 300
Speech and Hearing Sciences
Three Credits

The course is an introduction to the acoustical nature of speech and an orientation to basic instrumentation used in measurement and analysis. Information and theories regarding normal processes of speech and hearing and how to relate those processes to various communication disorders are discussed. Students will be introduced to the science of speech-language pathology and audiology as precursors to evidence-based practice.

SPTH 310
Technology in Communication Science & Disorders
Three Credits

The most common technologies for the Speech-Language Therapist for the execution of clinical and administrative tasks will be discussed and integrated. Practical experiences with computer applications and commercial and free software will be provided. Students will assess computer programs and applications to adapt them to their patients needs. Provision of distance services through the use of technology and its possible impact in confidentiality will be evaluated. Social network use in professional practice will be studied along with the behavior codes developed to this end. Ways that technological equipment helps people with disabilities to have independence within the society will also be discussed.

SPTH 353
Phonetics
Three Credits

The course focuses on the manner, place, sound, and features of the production of Spanish sounds in normal and disordered speech. It will emphasize the Caribbean Spanish dialect. The course will present the International Phonetic Alphabet (IPA) and apply the IPA symbols for the transcription of normal and disordered speech. The changes in meaning that occur as a result of the incorrect positioning of the articulators or the use of a redundant feature will be analyzed. The geometry of distinctive features will be discussed as it applies to possible changes in the selection of the phoneme. There will be intensive transcription of speech samples using the IPA symbols.

SPTH 355
Speech Development: Normal and Pathological Processes
Three Credits

The course centers on the study of normal, delayed, and deviant phonological and articulatory systems in Spanish speaking children. The course will discuss the most relevant theories of phonological development. Intervention methods for treatment of articulation and phonological disorders will be studied and analyzed. Articulation and phonology screening processes will be presented and applied.

SPTH 357
Early Intervention
Three Credits

The course is an in-depth study of early communication development that occurs during the first years of life, starting with normal and pathological sensory development and continuing all the way through pre-intentional behaviors. Clinical observations at day care centers, Pediatric Centers of the Puerto Rico Department of Health, laboratory exercises, and small group discussions will be provided. Exposure to the service delivery system of Puerto Rico Early Intervention Program, Avanzando Juntos, will be provided.

SPTH 375
Fluency
Three Credits

This course centers on the study of fluency disorders and their characteristics in children and adolescents. Normal versus abnormal fluency development will be examined. Different theories of the etiology of fluency disorders will be compared. A central focus will be placed on the design and application of appropriate treatment programs for young children, school-aged children and adolescent who stutter. This will include knowledge in related areas necessary to treat this multidimensional disorder holistically, i.e. motor skills re-training, family involvement, and counseling.

SPTH 395
Voice
Three Credits

The course centers on the normal aspects of voice in children and adolescents. Voice disorders, including diagnostic implications and remediation approaches, will also be studied. The course includes a detailed analysis of phonation problems and their characteristics, causes, and maintenance factors including organic, functional, and emotional aspects. Intervention strategies for voice disorders will be studied and applied in controlled clinical experiences.

SPTH 402
Treatment in CSD: Basics concepts, legal and ethical aspects
Three Credits

The course provides students exposure to current issues in the professions of speech pathology, audiology, speech therapy, and other related fields. Public Law 77, which is the Law that regulates the profession of speech therapy in Puerto Rico, and other related laws will be discussed. The vision of professional organizations in Puerto Rico and the United States will be presented. Peripheral aspects that frame the therapy situation will also be studied. The course includes the examination of the most basic and important aspects that should be considered when planning therapies including interviews, report writing, record keeping and staffing.

SPTH 404
Treatment in CSD: Related and Severe Conditions
Three Credits

The course centers on the study of the theories and practical knowledge needed to provide therapeutic services to children with conditions associated with problems of communication, diagnosed in infancy, childhood or adolescence (DSM IV). These conditions include: Attention Deficit Disorder with or without hyperactivity, Specific Language Learning Disabilities, Autism and Pervasive Developmental Disorders. Students will analyze of the skills required to manage clients with severe disabilities. Also included is the study of clinical strategies that will enable students to develop functional communication skills. Participants will also develop skills and attitudes needed to work with a team of professionals serving students with conditions that cause problems of communication.

SPTH 406
Language Disorders
Three Credits

This course is directed to further investigate the characteristics of language disorders in children and adolescents. Students will gain an understanding of the impact of interactive primary conditions, such as psychological disorders, syndromes and health conditions throughout the development of children and adolescents. Special attention will be placed on applicable intervention approaches, materials selection and drafting of goals and treatment plans aimed towards language areas.

SPTH 440
Knowledge Integration in Speech-Language Therapy
Three credits

The course presents a compendium of all relevant material presented in the specialty courses in order to better qualify

students for the successful completion of the speech-language therapists board exam.

SPTH 450

Clinical Practice I

Two Credits

Students will practice clinical skills previously learned in the pathology courses. During the course students will practice in at least two clinical settings and will deliver speech and language therapy services to clients from 0 through 21 years of age.

SPTH 451

Clinical Practice II

Three Credits

Students will refine the clinical skills acquired in Clinical Practice I, Treatment II, III and IV. During the course students will practice in at least two different clinical settings that serve populations with attention deficit, learning disabilities, severe language delays, and pervasive disorders. Screening techniques and procedures will be applied in clinical settings.

INTERNATIONAL SCHOOL OF DESIGN AND ARCHITECTURE

The International School of Design (ISD) at the Universidad Ana G. Méndez-Recinto de Gurabo initiated its operation as an administrative unit in 2006. The first two degrees that it will offer are the Bachelor's Degree in Design with concentration in Industrial Design (BDes) and the Associate Degree in Fashion Design (AFD). The School has become the seventh academic unit of the institution, and the Dean will be the Chief Officer of the School. Initially the School will have an administrative director; later, it will hire a secretary and a student affairs coordinator. The ISD faculty will report to the Dean, who reports to the Vice-Chancellor.

MISSION

Prepare leaders and professionals in the design field who are competitive and focused toward an international academic perception, critical, multidisciplinary, committed to debate, investigation, cultural content and to the technological merits of the designed object and its production technology.

VISION

To be known in Puerto Rico and internationally as leaders in the development of professionals in design with international and multidisciplinary perspectives, oriented toward the needs of the contemporary human being.

GOALS

The proposed program relates to the Institutional mission. The program's goals are:

- Promote ethical and cultural values to enable students to make better use of their judgment, rights, and obligations.
- Establish international collaborations.
- Graduate well prepared students in the area of design
- Promote the uses of technology for design and production
- Establish collaborative relationships between the University and the external community by promoting research, and industrial relationships
- Fulfill the institutional mission through these goals.

SPECIALIZED ACCREDITATION

Candidate status was granted in January 2016 for the Master Degree in Architecture by the National Architectural Accrediting Board (NAAB).

FACULTY

Members of the faculty will be carefully chosen educators and practitioners with academic preparation and practical experience in the discipline. These faculty members will be chosen from design professionals with preparation and practice in the area.

Ana Cristina Quiñones/ Instructor
MA, University of the Arts London, London, UK

Ana Rebecca Campos / Instructor
MA Domus Academy, Italy

Aurorisa Mateo / Associate Professor

MLArch, Universidad Politécnica de Puerto Rico

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN FASHION DESIGN (AFD)

The Associate degree in Fashion Design will train students to take part as professionals in all aspects of the garment industry, ranging from children's apparel to men's ready-to-wear and including couture. Particular attention will be placed on the history of fashion and its recurring interpretations. Students will be asked to see fashion and its recurring interpretations as a reflection and as a component in a continuum that includes ethical practice, manufacturing, marketing, promotion, accessorizing, and disposal. Students will not only be instructed in the areas of fashion concept development, but in the business aspects of the rapidly growing clothing industry. Students may also focus on make-up and costume design for theater, television and film.

The program has several distinct areas of focus:

- General education component
- Core curriculum in design
- Business courses
- Practical experiences in different settings
- Concentration courses
- Close student-faculty interaction, and academic counseling
- Distinguished faculty who are has experience as practitioners in the field

GENERAL OBJECTIVES OF ASSOCIATE DEGREE IN FASHION DESIGN PROGRAM

The goals of the Associate Degree in Fashion Design are:

- To provide students with the knowledge to develop their skills and contribute to our society.
- To capacitate designers for a variety of settings.

SPECIFIC OBJECTIVES OF ASSOCIATE DEGREE IN FASHION DESIGN PROGRAM

To develop designers capable of designing innovative garments.

To fulfill the needs of local industry.

To provide designers capable of developing their own businesses and are sensitive to ethical and integrity issues.

Graduation Requirements

Undergraduate students of the Universidad Ana G. Méndez-Recinto de Gurabo will be eligible to receive the academic degree after meeting the requirements and procedures established by the institution and the following:

- Completion and approval of a Portfolio.

ASSOCIATE DEGREE IN FASHION DESIGN ALUMNI PROFILE

Graduates from the Associate Degree in Fashion Design will:

- Apply the ethical principles that rule the profession.
- Have the competence to select and create the appropriate design for the clients' needs.
- Have the knowledge to develop their own business.
- Have sensibility for ethnological diversities and needs.

ASSOCIATE DEGREE IN WEB DESIGN

The goal is to become a Web Designer, an expert qualified to deal with the Internet's continuous string of advances, who has the training and skills to define, create, and design them. A web designer configures telecommunications systems to ease people's access to content and audiovisual information.

ISD Web Design program graduates are qualified to work as:

- Web Designer
- Web Art Director
- Web Creative Director
- Multimedia Designer
- Web Specialist
- Web Information Architect

ASSOCIATE DEGREE IN ARCHITECTURAL DRAFTING

With the Architectural Drafting degree, the student will be trained to manage architectural, mechanical, electrical, civil, structural and products technical drawings. In addition, the student will be prepared for the examination administered by the Puerto Rico Drafting Accreditation Board. Graduates of our program in Architectural Drafting will be qualified to prepare paper and digital drawings, as well as plans, in 2D and 3D, using CAD software from a sketch.

Graduates will be qualified to work as:

- Architectural Drafter
- Surveyor Drafter
- Engineer Drafter
- Industrial Design Drafter
- 3D Modeler
- 2D and 3D Render

BACHELOR'S DEGREE IN DESIGN WITH CONCENTRATION IN INDUSTRIAL DESIGN (BDes)

The Bachelor's program in Industrial Design will focus on the design of objects that are used to assist us in daily activities, improve the quality of our lives, and bring pleasure, creativity and meaning to the world we see and the things we do. Students will be focused on multiple productions, from limited editions to mass market. Each student, based upon his or her general interests, will focus on the design of a range of products from furniture, appliances, wearable technology, electronics, lighting, table top items, and hardware tools to toys, human powered vehicles, devices for the elderly or disabled, to name a few areas. Particular attention will be placed on the issues of affordability, social justice, sustainability and environmental impact, and the relationship of those factors to export trade, tourism, and emerging markets.

The academic and professional orientation of the program enables students to learn different techniques in order to apply them to a diversity of clients. It also offers practical experience and business courses in order to prepare students to work in different industries or develop their own project.

The program has several distinct areas:

- General education component
- Core curriculum in design
- Business courses
- Environmental courses
- Practical experiences in different settings
- Concentration courses
- A close student-faculty interaction and academic counseling
- A distinguished faculty with experience as practitioners in the field

Program General Objectives of Bachelor's Degree in Design with Concentration in Industrial Design

The goals of the Bachelor's Degree in Design with Concentration in Industrial Design are:

- To provide students the knowledge to develop the skills to contribute to our society.
- To capacitate designers for a variety of settings.

Program Specific Objectives of Bachelor's Degree in Design with Concentration in Industrial Design

- To capacitate designers capable of developing their own industry.
- To develop designers capable of designing innovative products.
- To fulfill the needs of local industry.

- To provide designers capable of developing their own businesses and sensitive to ethical and integrity issues.
- To create design appropriate to clients' needs.

ALUMNI PROFILE

Graduates of the Bachelor's Degree in Design with Concentration in Industrial Design will:

- Have competence skills and knowledge in industrial design.
- Be capable of working in a diversity of industries.
- Apply the ethical principles that rule the profession.
- Apply the environmental principles that rule the profession.
- Have the competence to select and create the appropriate design for the clients' needs.
- Be able to conduct research in the field.
- Have the knowledge to develop their own industry
- Be sensible to ethnological diversities and needs.

CURRICULUM

BACHELOR'S DEGREE IN DESIGN WITH CONCENTRATION IN INDUSTRIAL DESIGN (BDes)

The Industrial Designer has the skills to design objects that improve people's quality of life. Industrial designers complement people's everyday life activities. With an ISDA Bachelor's degree in Industrial Design, you could be a: Furniture Designer, Toy Designer, Medical Equipment Designer, Package Designer, Prototype Designer, Scenic Designer/Stage Designer and Design-Production Director.

BACHELOR'S DEGREE IN DESIGN WITH CONCENTRATION IN GRAPHIC DESIGN (BDes)

The graphic designer masters the language of design, in both its visual and non-visual dimensions, and faces new physical, technological, social, and cultural worlds. Graduates of the ISDA Graphic Design bachelor's program will be trained to judge appropriately the quality and effectiveness of design projects through the rigorous use of current thought in the field of design. As a Graphic Designer you can be a: Creative Director, Package Designer, Textile Designer, Corporate Identity Designer, Trademark Designer, Advertising Designer, Art Director and Printing Press Director.

BACHELOR'S DEGREE IN DESIGN WITH CONCENTRATION IN INTERIOR DESIGN (BDes)

The interior designer plans, designs, and furnishes interiors of residential, commercial, or industrial buildings. The designer formulates design that is practical, aesthetic, and conducive to intended purposes, such as raising productivity, selling merchandise, and/or improving life style. The ISDA Interior Design Program includes manual and CAD drafting and design, space planning, design history, furniture design, lighting calculations, ergonomics and business practices. With an ISDA Bachelor's degree in Interior Design, you could be a: Residential Interior Designer, Commercial Interior Designer, Industrial Interior Designer, Project Manager, Store Window Designer, Space Planner, Trend Researcher, Material Specialist, Furniture Designer, Stage Designer and Interior Design Publication Editor or Critic.

Elective Courses (3 credits)

**BACHELOR'S DEGREE IN SCIENCE WITH CONCENTRATION
IN LANDSCAPE ARCHITECTURE (BSLA)**

The Landscape Architect designs, preserves, maintains and improves the natural surroundings in a sustainable and balanced form. The ISDA Science in Landscape Architecture Program includes studies and analysis from small-scale garden projects to regional and urban forest planning projects. The curriculum includes studies in history and theory, natural systems including principles of sustainability, site analysis and design, systems technologies, materials and methods, plant assessment, construction documentation, codes, ethics, regulations and professional practice. With an ISDA Bachelor's Degree in Science in Landscape Architecture, you could be a: Landscape Developer, Garden Designer, Landscape Contractor, Tourism Consultant, Planning Consultant, or a Recreational and Park Designer.

Elective Course (3 credits)

BACHELOR'S DEGREE IN DESIGN WITH CONCENTRATION IN FASHION DESIGN (BDES)

The Bachelor degree in Design with concentration in Fashion Design will train students to take part as professionals in all aspects of the garment industry, ranging from children's apparel to men's ready to wear to couture. Particular attention will be placed on the history of fashion and its recurring interpretations. Students will be asked to see fashion and its recurring interpretations as a reflection and as a component in a continuum that includes, ethical practice, manufacturing, marketing, promotion, accessorizing, and disposal. Students will not only be instructed in the areas of fashion concept development, but also in the technical aspects of the rapidly growing clothing industry.

DESCRIPTION OF COURSES

(Courses marked with @ could be offered in both modalities, traditional or on-line.)

ADID 111 **Technical Drawing I** **Six Credits**

This course introduces to the student to the profession of architectural drafting, the basic principles of drawings, laws and regulations. It includes the identification and use of the drawing instruments, alphabet of letters, lines, measurement and scales, applied geometry, orthographic projections, sectionals, isometric views oblique, perspective, auxiliary views, raised hand sketching and sizing. Students will complete their work on a drawing table.

ADID 121 **Computer Aided Drawing I** **Three Credits**

This is an introductory course in the use of AutoCAD computer-aided drafting software. Students will learn the advantages and disadvantages of using computer graphics, as well as fundamental capabilities of AutoCAD such as how to draw and edit entities (lines, circles, arcs, etc.). In addition the students will learn more advanced concepts such as how to work with layers and how to write text and dimension drawings. The course concludes with a final project that consists of drawing the floor plan, sections, and elevations of a two-bedroom residence.

ADID 122 **Technical Drawing II** **Six Credits**

This course is a continuation of ADID 111 and emphasizes the elements of the architectural sketch such as learning how to draw floor plans, dimensions, elevations (facades) and architectural sections. The symbols and nomenclature will be used in detail. The details in drawings of kitchens, bathrooms, bedrooms and dining rooms will also be discussed. Site and location, plans and other field elements will be examined.

ADID 223 **Methods and Construction Materials** **Three Credits**

This course introduces students to the basic principles of the methods and materials used in construction, including the final estimated cost of work. Students will learn about the different government agencies and private associations that govern construction. They will also learn about the different types of materials used to produce the various works, emphasizing concrete and steel, which are very common. The range of information provided will give the student the opportunity to become a versatile draftsman and be useful

in drafting the different ideas of professionals with whom he interacts.

ADID 231 **Computer Aided Drawing II** **Three Credits**

This course addresses the advanced AutoCAD technique of creating symbol libraries and working with isometric drawings. The emphasis of the course is on preparing students to produce civil (structural), mechanical (plumbing) and electrical drawings. Students will prepare their own symbol libraries to represent valves, pump, electrical outlets, etc. In addition, students will learn how to use the symbol libraries already created for AutoCAD. The course concludes with a final project, which consists of drawing the structural, plumbing, and electrical drawings of two-bedroom residence. This residence is the same one for which the architectural drawings were prepared in DRAF121 AutoCAD I.

ADID 232 **Technical Drawing III** **Six Credits**

This course examines the particular requirements to create civil (structural), mechanical (plumbing and HVAC), and electrical drawings. The emphasis is on familiarizing the students with the nomenclature and organization of the drawings. Fundamental principles for each of the subjects will be briefly presented as background. The course concentrates on examining and analyzing several construction drawings donated to engineering professor Juan C. Morales for educational purposes. Students will practice the concepts learned in class during the laboratory session. The laboratory session will include both drafting with instruments and drafting with the computer using AutoCAD.

ADID 240 **Mechanical Drawing** **Three Credits**

The course introduces students to the fundamentals of mechanical and industrial design through study and analysis of the physical description of the objects. This course includes topics such as: assembly drawing, welding drawing, structural delineation, industrial pipe drawing, flat air conditioning ducts and introduction to the civil drawing (typography). By using the table and drawing instruments, students develop the manipulative skills required in the plans.

ADID 241 **Computer Aided Drawing III** **Three Credits**

This course addresses the advanced AutoCAD technique of creating symbol libraries and working with isometric drawings. The emphasis of the course is in preparing civil

(structural), mechanical (plumbing) and electrical outlets, etc. In addition, students will learn how to use the symbol libraries already created for AutoCAD. The course concludes with a final project which consists of drawing the structural, plumbing, and electrical drawings of a two-bedroom residence. The residence is the same for which the architectural drawings were prepared in course DRAF 231 AutoCAD II.

ADID 242
Technical Drawing IV
Three Credits

This course prepares the student in the facet of foundations, situations plan and localization, topographic maps reading and additional topics on surveying like transversal, and card calculation. All work is done in a drawing table. The class concludes with a final project where the student draws the localization of a residential in a level according to the zonification zones.

ADID 250
Portfolio Studio
Three Credits

This studio will focus on the preparation and refinement of a portfolio that encompasses the student's work within the program and any other distinguishing activity. The goal will be the production of a refined, multifaceted presentation of the student goals and creative vision and his or her ability to engage in professional practice.

ADID 270
Internship
Three Credits

All students will be required to take part in a professional internship that employs a wide range of skills and knowledge developed in this degree program. Each student will work with a department advisor to fully realize the potential of this experience in an Architectural Drafting industry or giving professional services to an industry in drawing realization.

ANDE 100
Design Studio I- 2D and 3D Animation (Analog)
Three Credits

This course covers the fundamentals of animation and explores handmade animation techniques and processes. Also, in this course will be focused in understanding the relationship of bones and muscles at rest and in movement to be able to translate this to creating and maintaining correct volumes in anatomy drawing. Studying human, species and animal movement through sequential drawings, faces, gesture and poses drawing. Also in this course will show the technique called Stop-Motion. The students will create characters from different materials and manipulate them frame-by-frame to bring them to life. In this class the student will be asked to develop two dimensional characters

that are both personally and culturally resonant and imaginative. Particular emphasis will be placed on the expressive power of abstract forms and color. Research, thorough craftsmanship, and strong sophisticated designing will be stressed.

ANDE 150
Design Studio II – 2D Animation (Computer)
Three Credits

This course introduces the student to the creative experience while they learn the potential of this very dynamic form of expression in a computer based medium. Through studio projects, students will be introduced to the basic principles of 2D animation, including timing, movement for animation, and basic editing. The class focuses on process rather than the finished product. Individuality and experimentation will be emphasized. Class exercises will be filmed with digital video cameras, computer edited, and output to DVD.

CTEC 200
Computers and Peripherals
Four Credits

This course covers all components and ancillary systems comprising a PC. It provides an introduction to every component and analyses its functionalities and weaknesses. It analyses the role of each component in supporting an application and the user functional goal. It presents the PC as a package of matched components and dissects all of its internals individually and integrally. Some of the components covered are the CPU, RAM, display apparatus, ROM, Fixed Disk, USB, Network Adapter, CD-ROM, CDR's, DVD's, Floppy disk, Serial and Parallel ports, Mouse, Keyboard and others. It also covers the most critical peripherals such as, Printers, Scanners, Digital Imagery equipment, Modems and others.

CTEC 210
Operating Systems, Installation and Configuration
Three Credits

This course covers all software components comprising a PC. It provides an introduction to every component and analyses its functionalities and weaknesses. It analyses the role of each component in supporting an application and the user functional goal. It presents the PC as a package of matched components and dissects all of its internals individually and integrally. Some of the software components covered are: the operating system and its sub-components, data communications software components, DOS components, peripheral administration components, Windows Systems architecture, disk operating software, essential user applications, memory management software, and software upgrades management. The course covers in detail the diagnosis, procedures and resolution of software problems. It also deals with the Virus problem and the most effective

software solutions. Finally, it covers Networking from a software perspective.

CTEC 340

Programming for the Web

Three Credits

This course provides the student with a basic understanding and skills to program for Web Sites. It covers the basics of Data Base manipulation techniques using MySQL and PERL. It covers matters such as configuration for DBA systems on the Web, Perl scripts, performance, and error handling. Finally, the students are presented with a live example of a simple Web Based DBA control application. The course then focuses on one of today's most important development in suite/environment, the Macromedia Dreamweaver/Flash environment. It covers the complete development cycle using these tools, from plan to publishing and maintenance. Matters such as Dreamweaver graphics, formatting for the Web, style sheets, cascading sheets, dimensional tables, forms, frames, templates, layers, animation and others are covered. It also covers Fireworks image and text manipulations, working with objects, effects, creating buttons, backgrounds, hotspots, sliced images, rollovers, integrating Fireworks images with HTML applications and finally, auditing and publishing a Web Site and post-publishing practices.

DESI 121

Drawing I

Three Credits

This studio course provides students with instruction in fundamental freehand drawing skills. Students will be working with models and other live subjects. The importance of sketching as a means of recording and demonstrating concepts and processes will be emphasized. The development of fundamental drawing skills will be stressed, and standard manual product illustration skills will be introduced. Pencil, charcoal, ink, pastels and watercolors will be used to render figures and objects. Developing an ability to convey volume, texture and form through line and gesture will be stressed.

DESI 131

Image Studio Color

Three Credits

This course builds upon the curriculum of Image Studio - Black & White and introduces color into rendering and representation skills. Digital color imaging and printing skills are introduced and students will be taught basic digital and film photographic documentation skills. In addition, students will learn traditional product illustration techniques including marker and colored pencil techniques.

DESI 200

Introduction to Screenprinting

Three Credits

This course covers the fundamentals of screenprinting as a reproduction medium for design in Puerto Rico. The method will be applicable to a various media, forms and shapes. The medium is based on permeability and ink deposit through fabric. Learning this technique will help students develop the creativity. Research, thorough craftsmanship, and strong sophisticated designing will be stressed.

DESI 255

Core Studio: Concept Development and Realization I

Four Credits

This is a core studio in this program. Students continue to develop their awareness of specific markets within fashion and increase their ability to target their individual styles to a specific market segment. Students create portfolios of original design lines within the categories of the couture and high-priced industry. They apply knowledge of the couture to design, drape, fit, and construct a mini collection for a particular target market. They develop styles and images through fabric sourcing, market research, and inspirational research. Emphasis is placed on continuity of style within design, presentation and trend analysis through the study of collections showing in London, Milan, Paris and New York. Students learn the principles of draping as a method of designing original garments in three-dimensional forms. Draping techniques and construction skills are developed for more advanced structured garments, along with an understanding of silhouette, proportion and current style trends. Students work on developing their strengths in design to ensure establishment of a defined and strong personal design philosophy.

This course expects innovative design solutions from the students that reach beyond popular forecasts. Personal interpretation and risk-taking are emphasized. The collection designed in this course will be basis for production in Construction Techniques I.

DESI 256**Core Studio: Concept Development and Realization II****Four Credits**

This is a core studio in this program. It is an introduction to swimwear and intimate apparel design. Students gain a broad working knowledge of swimsuits, intimate apparel and related apparel, such as cover-ups and beach accessories. Original designs are produced using flat pattern and draping techniques and industry specific construction methods and machinery. In this studio students will develop a collection of their own choosing. They will undertake research and develop a concept that they feel expresses their vision and strengths as a designer. These ideas will be applied in the development of a collection of a dozen looks. Working with specialized crafts studios will be stressed when appropriate. The collection designed in this course will be the basis for production in Construction Techniques II.

DESI 260**Technical Rendering: Measurement and documentation methods****Two Credits**

This course will focus on the mastery of manual technical rendering skills as the basis for an understanding of the physical specificity of a designed object. The topic is approached as a decision-making and communication process. Students will be taught not only the tradition of manual drafting but the meaning of the language it embodies and the way that language translates in computerized terms. Students will develop portfolios of renderings that express a range of design decisions and construction specifications involved in the evolution of objects.

DESI 285**Digital Photography****Two Credits**

This course develops students' creative vision of the photographic composition that is necessary for application in the design world, beginning with analog photography and ending with digital photography. Students will work with different formats for digital images. They will learn how to work with the most useful software in the digital images industry, as a tool for managing and manipulating digital images.

DESI 315**Ethic and Legislation in Design****Three Credits**

This course introduces students to legal and ethics issues that affect design. Topics examined include intellectual property, freedom of expression and contract law. The basic legal issues of contract and property law, within the creative context, will be examined: agreements, copyright, trademark, and patents. Students will learn how to protect their rights, and as importantly, how to lead the legal debate

with the identification of legal concepts and terms which apply to the practice of design. In addition, the course will approach other ethics issues: free speech, obscenity, pornography, libel, privacy and their damages. The course will introduce students the ability of distinguishing poor from good ethical justifications. Legal moral and ethical principles will also be examined.

FADE 100**Basic Sewing****Three Credits**

This course is designed to help the student become familiar with the basics of machine sewing, get confident handling a machine, and develop a range of related skills, like looking at different needles suitable for fabric types, practicing standard stitches, seaming straight, curved and gathered edges, learning most common seam types (as French seams and flat fell seams), etc.

FADE 125**Representing the Body****Three Credits**

This course focuses on the human form. Understanding human anatomy will be the point of departure for exercises that employ various media to represent the body in action and repose. In addition to developing research skills, students will focus on documenting the body through digital photography, drawing, collage and digital rendering, using Adobe Illustrator and various fashion Computer Aided Design programs.

FADE 131**Fashion Concept Development I****Three Credits**

This is a core studio in this program. Each student's primary goal is the development of new fashion concepts. In the first semester students will use their local environment as the site from which ideas will be culled. These ideas will be applied in the development of a collection of a dozen looks. Women's wear will be stressed. Clothing designed in this course will be basis for clothing production undertaken in the second semester's Studio Methods and Structures. This course will focus on the economics and production standards of the prêt-à-porter industry.

FADE 132**Fashion Concept Development II****Three Credits**

This is a core studio in this program. Each student's primary goal is the development of new fashion concepts. In the second semester, the research focus of this course will be on global trends in the sportswear and active wear industries and their niche markets. These ideas will be applied in the development of a collection of a dozen looks. Men's wear and children's apparel will be stressed. The collection

designed in this course will be the basis for production in Studio Methods and Structures. This course will focus on the economics and production standards of the prêt-à-porter industry.

FADE 140

Fashion Drawing Three Credits

In this studio students will continue to build upon skills developed in Representing the Body and will employ those skills in special assignments related to the development and production of a collection of poses and bodies. Textiles illustration will be addressed. The primary work of this class will be drawing from the live clothed model to develop industry-standard fashion illustration skills. The maintenance of a sketchbook and the production of sketch drawing will be stressed.

FADE 150

Studio Methods & Structures Three Credits

The basis of work in this course will be traditional tailoring techniques, from draping to the technology of using various materials. The creation of forms that interact with the human body will be explored. Experimental approaches suggested by students' designs produced in Fashion Concept Development I will also be explored. This course is a hands-on clothing construction studio. Sewing skills will be stressed and patternmaking skills will be introduced.

FADE 200

Patternmaking Three Credits

Traditional patternmaking skills will be the focus of this course. The instructor will take students through a series of exercises that develop these skills. Primary focus will be placed on the development of patterns for designs created by the students as part of program coursework.

FADE 210

Construction Techniques I Three Credits

The work of this course will be linked to designs developed in Core Studio Concept Development and Realization I. Students will continue to develop their sewing, patternmaking and construction skills with a particular focus on collaboration with other technicians and craftspeople. This course will introduce the students to the sewing techniques practiced in the finest haute couture ateliers around the world and provide the basis for understanding couture. Students will learn couture techniques in cutting, hand stitching, seam and hem finishes, pocket construction, pressing, and finishing.

FADE 215

Digital Fashion Design Three Credits

This course will focus on the range of digital technologies used in the fashion industry. With a primary focus on Computer-Aided-Design software, students will learn flat pattern drafting, and fashion illustration technologies that will enhance the accuracy of their construction skill and increase their ability to visualize color and other potential variations in their designs.

FADE 220

Introduction to Costume Design Three Credits

In this studio the students will be introduced to the costume design world of the theater, film and television. The course includes a historical analysis of clothing and textiles, a research phase and an evaluation phase, leading the student to the design of the graphic project. This design is supported by the laboratory, which is the practical portion of the course. In addition to historical costumes, other costumes will be created according to the student's inclinations, through the personal interpretation of various themes. Encounters with experts from the field of theater, film and television are also included in this course.

FADE 240

Portfolio Studio Three Credits

This studio will focus on the preparation and refinement of a portfolio that encompasses the student's work in the program and any other distinguishing activity. The goal will be the production of a refined, multifaceted presentation of the student's goals and creative vision, and his or her ability to engage in professional practice.

FADE 255

Core Studio: Concepts and Realization I Three Credits

This studio is a core studio in this program. Students continue to develop their awareness of specific markets within fashion and increase their ability to target their individual styles to a specific market segment. Students create portfolios of original design lines within the categories of the couture and high-priced industry. They apply knowledge of the couture to design, drape, fit, and construct a mini collection for a particular target market. Students also develop styles and images through fabric sourcing, market research, and inspirational research. Emphasis is placed on continuity of style within design, presentation and trend analysis through the study of collections showing in London, Milan, Paris and New York. Students learn the principles of draping as a method of designing original garments in three dimensional forms. Draping techniques and construction skills are developed for more advanced structured garments along

with an understanding of silhouette, proportion and current style trends. Students work on developing their strengths in design to ensure establishment of a defined and strong personal design philosophy. This course expects students to produce innovative design solutions that reach beyond popular forecasts. Personal interpretation and risk-taking are emphasized. The collection designed in this course will be basis for production in Construction Techniques I.

FADE 256

Core Studio: Concepts and Realization II

Six Credits

This studio is a core studio in this program. The course is an introduction to the design of swimwear and intimate apparel. Students gain a broad working knowledge of swimsuits, intimate apparel and related apparel such as cover-ups and beach accessories. Original designs are produced using flat pattern and draping techniques and industry specific construction methods and machinery. In this studio students will develop a collection of their own choosing. They will undertake research and develop a concept that they feel expresses their vision and strengths as a designer. These ideas will be applied in the development of a collection of a dozen looks. Working with specialized crafts studios will be stressed when appropriate. The collection designed in this course will be basis for production in Construction Techniques II.

FADE 260

Concept Presentation

Two Credits

Presentation is essential to understanding and marketing fashion. In this course students will address the marketing of their designs. They will develop branding for themselves as unique designers that will include marketing strategies and the production of a runway show. This show will be a by-invitation event designed to introduce the designer to the general public.

FADE 270

Internship

Three Credits

All students will be required to take part in a professional internship that employs a wide range of skills and the knowledge developed in this degree program. Each student will work with a department advisor to fully realize the potential of this experience in a fashion design industrial company or by giving professional services to a company involved in fashion realization.

FADE 310

Core Studio: Concept and Realization III

Three Credits

This is a core studio in this program. Each student's primary goal is the development of new fashion concepts. In this third

Core Studio, the research focus of the course will be on experimental and conceptual designs: creation of original and unique silhouette and construction details will be the main goal for the student. These ideas will be applied in the development of a women's collection of a dozen looks: two of these looks will be realized during lab sessions.

FADE 315

Construction Techniques II

Three Credits

Student will continue to develop his/her sewing, patternmaking and construction skills, focusing on the realization of one pair of pants, a vest and a child's dress. The whole production process will be analyzed: pattern realization (by draping and/or patternmaking), fabric cutting, sewing and grading.

FADE 320

Construction Techniques III

Three Credits

Student will continue to develop his/her sewing, patternmaking and construction skills. In this course the student will learn the sewing techniques practiced in the finest haute couture ateliers around the world. The whole process needed for garment construction will be analyzed for the realization of classic and casual jackets and coats: from draping and patternmaking to fitting, cutting, sewing, hand stitching, pressing, finishing and size grading.

FADE 330

Digital Patternmaking

Three Credits

This course focuses on the use of computers and specialized software for the production of fashion patterns, according to fashion industry standards. Students will learn how to draft, manipulate and grade digital pattern for industrial production.

FADE 400

Senior Design Project I

Six Credits

Students will engage in a two-semester long process, based upon professional practices, that will result in the development of an interior design project. Students are required to develop and submit a programmatic project proposal with the approval and guidance of the Senior Design Project Committee and faculty. Emphasis is placed on a high degree of complexity and challenge within the design project.

FADE 401

Senior Design Project II

Six Credits

This course is a continuation of the work begun in FADE 400. Students continue the process, based upon professional

practices, that will result in the development of a fashion design project. Design processes employed in earlier courses will be applied in the ideation, research, design documentation, and completion of a fashion design proposal. Investigation of design trends and market research will be undertaken as students work toward innovation in their designs.

FADE 405

Digital Fashion Design II

Three Credits

Students will improve their skills in using digital technology: fashion collections will be designed completely through the use of software for Computer Aided Design (CAD), such as "Adobe Photoshop" and "Adobe Illustrator". Students will also learn basic concepts of graphic design.

FSDE 100

Freshman Seminar

Three Credits

This course will provide the student activities, techniques and academic experiences in terms of design discipline. The student will be able to identify and develop personal and academic skills to improve their performance.

FSDE 105

Freshman Seminar

Three Credits

This course will provide the student activities, techniques and academic experiences in terms of design discipline. The student will be able to identify and develop personal and academic skills to improve their performance.

GEDE 300

Globalism and Cultural Integrity

Three Credits

This course focuses on the role of a global economy, ecology, and political circumstances in the designers' ability to effect change in various cultural contexts. Beginning with discussion of artisan traditions and designing to cultural specificity, this course proceeds through investigations of notions in universal design, inclusive design, social entrepreneurship, cultural supremacy, technology and the impact of outsourcing and other shifts in global economies on the physical culture of the 21st Century.

GRAD 105

Typography I

Three Credits

Students will learn about the history of typography. Topics include classification, anatomy, and different types of typography. Students will study the different typographical expressions. They will analyze optical effects of typography, as well as the typographical measuring system. They will also learn to work with typographic composition and start to

design their own typographies. Students will study the development of digital typography, from analog to digital processes and they will learn to convert these into vector images, using Bézier curves to create each character. Then using a conversion program, students will pass to True Type (TT), changing to a digital font. Students will learn about different international organizations that work in the development and study of typography.

GRAD 130

Image Studio Black and White

Three Credits

The objectives of this course include the introduction of digital image making and graphic design software; the development of image research skills; the development of narrative presentation skills; and a cross-cultural introduction of information organization systems. These skills will be applied in various forms required of industrial designers including, simple instruction manuals, research documents, user scenarios, and various forms of presentation boards. Particular attention will be placed on typography and photographic imagery.

GRAD 131

Image Studio – Color

Three Credits

This course builds upon the curriculum of Image Studio - Black & White and introduces color into rendering and representation skills. Digital color imaging and printing skills are introduced and students will be taught basic digital and film photographic documentation skills. In addition, they will learn traditional product illustration techniques including marker and colored pencil techniques.

GRAD 145
Communication Studio
Three Credits

This course introduces designers to skills necessary for the organization of information and for giving live presentations. The focuses on the publishing and graphic design skills employed in the development of documents and presentation materials, ranging from business cards and announcements to booklets, research documents, concept presentations and exhibition materials. In addition, significant attention will be paid to students live presentation skills. These presentations will be coached, scripted, videotaped and critiqued. For this course Apple computers and a video recording studio are required.

GRAD 201
Graphic Communication Media
Three Credits

This is an introductory course on the fundamentals and concepts of the media of graphic communication. Students study the different graphic communications media, such as digital video for multimedia work, graphic design and typography, effective communication for printing, design and composition of pages, and illustrations, as well as the fundamentals of design. Students must stay current and study the aspects and new developments in the publishing industry. They also analyze technological development and its relationship with traditional operations and with emerging demands in methods and creations of design, management, programming and distribution..

GRAD 202
Graphic Design Studio I
Six Credits

The objective of the course is to provide students with basic knowledge about the history and evolution of graphic design up to the digital era. Students will learn how to work with design elements: image and typography. They will begin to differentiate between vector image and raster image. Students will use software to manage both types of images. They will also design simple publications, such as stationery, brochures, posters, shoppers, creative resumés, and newspaper advertisements. They will learn to select the suitable image format for the importation and exportation images among software in use.

GRAD 210
Graphic Design Studio 2
Six Credits

Students will learn to diagram a publication of multiple pages. They will study the entire component of a publication in books, magazines, newspapers, shoppers, and brochures. Importation and management of digital images to all types of publications will he taught. Topics include the design of

master pages, layers, typographic styles, columns and other elements of a digital publication. Students will also study and create grids.

GRAD 215
Typography II
Three Credits

In this course students will learn how to manage fonts in different platforms. Students will begin to recognize the various digital fonts in existence and how they are developed. They will learn how to manage these fonts in the different media available and to integrate typography as a design element and as an image. They will transport the text to the different software and learn all the specifications considered necessary to complete the task. Students will begin to create their own fonts library and use the internet as a searching tool to select fonts which are suitable for their design.

GRAD 310
Graphic Design Studio 3
Six Credits

In this course students will obtain knowledge in the area of interface design, beginning with the creation of a nonlinear conceptualization in the graphic design area. They will work with dynamic design principles. Students' previous courses had a static basis; this course has a dynamic basis. Students will begin to work with the design of button, menus, bars, links and graphics in movement, while applying basic knowledge of design to a multimedia protect.

GRAD 315
Ethics and Legislation in Design
Three Credits

This course introduces students to legal and ethical issues that affect design. Topics examined include intellectual property, freedom of expression and contract law. Students will learn how to protect their rights, and equally importantly, how to lead the legal debate with the identification of legal concepts and terms that apply to the practice of design. Basic legal issues of contract and property law within the creative context will be examined. Among the topics explored will be the work for hire agreement, the consignment agreement and the agency agreement. Copyright law, trademarks, and patents will also be explored. Issues such as registering a copyright, copyright infringement, registering a trademark and patents will be examined from the perspective of the designer in analog and digital design.

GRAD 320
Packaging Design
Three Credits

In this course students learn components and principles of packaging design. Topics include the history of the package

and the importance of design elements (image and typography) on the packaging design. Students will recognize the importance of art as a design element, as are color, space, shape, texture, and lines. They will obtain knowledge of managing the different materials available for the creation of a package that can be designed and created by students. They will also study some of the rules and regulations established for package design, and will learn the different classifications that condition transportation and storage of packages.

GRAD 325
Video Editing
Six Credits

Students will begin to study the bases for linear and nonlinear video edition. Students will learn about the RGB color mode used in computer monitors and commercial television. They will learn logistics and techniques for video recording and the appropriate techniques for video editing. Students will learn how to integrate text on the video screen and how to work with programs for digital video editing. Finally, they student will learn how to select from different system memories, storage systems, as well as the appropriate format for the project.

GRAD 410
Senior Design Project I
Six Credits

In this course, students begin a process based on professional practices that will result in the development and completion of a graphic design proposal. Design processes employed in earlier courses will be applied in the ideation, research, design documentation, and prototyping of the new product. Investigation of design trends and market research will be undertaken as students work toward innovation in their designs.

GRAD 420
Senior Design Project II
Six Credits

This course is a continuation of work begun in the first semester. Students continue a process based upon professional practices that will result in the development and completion of a graphic design proposal. Design processes employed in earlier courses will be applied in the ideation, research, design documentation, and completion of a graphic design proposal. Investigation of design trends and market research will be undertaken as students work toward innovation in their designs.

GRAD 430
Portfolio Studio
Three Credits

This studio will focus on the preparation and refinement of a portfolio that encompasses the student's work within the program and in any other distinguishing activity. The goal will be the production of a refined, multifaceted presentation of the student's goals and creative vision, as manifestation of his or her ability to engage in professional practice.

GRAD 440
Internship
Three Credits

All students will be required to take part in a professional internship that employs a wide range of skills and knowledge developed in this degree program. Each student will work with a department advisor to realize the potential of this experience fully, either in a graphic design company or by giving professional services to a graphic artist in a product realization.

GRDE 130
Typography I
Three Credits

In this course students will acquire knowledge about the history of typography. Topics include classification, anatomy and the differentiation of types. Students will learn about different expressions on typography and will analyze optical effects of typography. Students will learn about typography measure systems and their composition. Students will start designing there own typography. Later, they will also be studying digital typography in order to convert analog designs to digital designs and, from paper to vectors. Bezier Curves will be taught as a means to create a character. Students will also explore the True Type (TT) digital conversion. International typographers organizations will be studied and aknowledged.

HIDE 100 @
History of Art
Three Credits

This course surveys the history of the representation of the human body as a record of the social, technological, environmental, and political circumstances of a period. The goal of this course is to establish among young designers an understanding of art as an expression of the desires, aspirations, needs, esthetics, and available resources of subjects/users throughout history. Human beings and their representations of the environment will be examined, from the earliest representations of humans, through current film and digital media that envision the future,.

HIDE 105**Fashion History****Three Credits**

This seminar course traces the development of fashion and body adornment in Asia, Africa, Europe, Greece and Roman Empire through the establishment of Paris, Milan, New York and Latin America as distinct fashion capitals, as well as the establishment of independent fashion centers across the globe. Economic, political, technological, environmental and cultural history will be discussed in relation to fashion's evolution.

HIDE 106 @**Dwellings: The constructed environments,****Prehistory to 1500****Three Credits**

This course examines the evolution of architecture and design as a production of human imagination. Through lectures, tutorials and research projects the students will understand the way in which architecture and design is always dominated by the exigencies of time and location and developed as a consequence of forces of economy, trade, war, political situations, religion, or the exchange of knowledge.

HIDE 110 @**Representing Culture: Art and Artifact 1500-1850****Three Credits**

This course will study the history of art and objects in the contexts of one another, economics, industry and technology, culture, politics and sociology. Beginning in 1500, the migration of ideas around the globe will be explored in relationship to the evolution of design and art. Particular attention will be paid to moments when cultures intersect and the impact of those moments on the course of ideas and material culture.

HIDE 115**Landscape Design History and Theory: Natural & Constructed Environment from 1500 - Today.****Three Credits**

This course offers a study of the history and theory of Architecture, Landscape Architecture and Urban Design since 1500. The course emphasizes the relationship between design of the natural and built environment and will pay close attention to socio-cultural, technological, aesthetics and environmental factors.

HIDE 200 @**History of Design 1800-1945****Three Credits**

Through lectures, tutorials and research projects students will be introduced to the history of design, from the industrial revolution through the innovations of WWII.

Relationships between design, art, industry, environment, and culture will be discussed as factors in the development of design. The rise of urbanism, history, politics and technological advances will be examined as pivotal influences in design.

HIDE 300**Design Since 1945****Three Credits**

This course surveys the history of design from 1945 up to today. Students will discuss design in both the industrialized Western world and the Far East. Topics introduced include the global who's who of designers, architects, cultural and national design organizations, and corporate icons. Design components, such as modernism, consumerism, reconstruction after World War II; nostalgia and heritage; social responsibility, and their influence on design will be researched. Industrial design as a powerful marketing tool that has captured the international consumer through culture, socioeconomics, politics, and technology will be examined.

INDI 140**Industrial Design Studio 1****Three Credits**

This course focuses on the development of 3-dimensional forms. Issues of materiality, ergonomics, and user interface will be introduced through exercises that result in iterations of a series of familiar typologies. Masses, volumes, containers, shells, and skins will be explored in various materials, alone and in combination. Particular attention will be placed upon the history of form as a manifestation of culture, environment and technology.

INDI 150**Industrial Design Studio 2****Three Credits**

In this design studio students will be introduced to design methodologies that will form the basis of their training as industrial designers. Through a series of design projects and exercises students will be introduced to issues of accessibility in relationship to ability, physical and psychological development, gender, culture and environment. Ergonomics will also be treated. An on-line component will tie studio work to related literature, historical precedents and research methodology. Furniture design will be developed.

INDI 160**Technical Rendering and Product Illustration****Three Credits**

This course will focus on the mastery of manual technical rendering skills as the basis for an understanding of the physical specificity of a designed object. Approached as a decision-making and communication process, students will be taught not only the tradition of manual drafting, but also

the meaning of the language it embodies and the way that language translates in computerized terms. Students will develop portfolios of renderings that express a range of design decisions and construction specifications involved in the evolution of objects.

INDI 250
Industrial Design Studio 3

Six Credits

Through lectures, design exercises, individual and group projects, and other activities, students will delve further into the processes involved in the practice of industrial design. Students will be taught by means of professional methodologies as well as through pin-ups and desk critiques. This course is particularly focused on the development of user scenarios, ideation, and concept presentation through the design of hand tools and other simple objects. Students will also treat user interfaces and ergonomics. Design, art and social history will be referenced throughout the course and students will be expected to complete significant research project that address these factors in the development of their own work.

INDI 251
Industrial Design Studio 4

Six Credits

This course builds on the work done in DESI 250 - Industrial Design 3: Core Studio: Concept and Realization I, and further explores user-centered design, ergonomics, and legible interfaces, within the context of inclusive design. In addition, students will undertake projects that involve the inclusion of engineered mechanisms and external power sources.

INDI 270
Models I
Three Credits

This course introduces model making as a vehicle for the development and realization of design concepts. The uses of various forms of representation will be taught and contextualized, from sketch models to scaled representation to full scale appearance models. Professional standards will be stressed. Students will be instructed in choice of materials, assembly, milling, sanding, priming, and the use of the lathe, vacuum former, bending machines, and the hot belt.

INDI 271
Models II
Three Credits

This course builds upon the knowledge and skills learned in INDI 270 - Models I. Students will incorporate those skills in the production of models and working prototypes. Complex, contextualized models will also be built. These projects will be executed both individually and in teams.

INDI 280
Introduction to CAD and CAID
Three Credits

Students will be introduced to industry standard computer-aided design and computer-aided industrial design software that will provide students with the ability to produce detailed two-dimensional renderings of objects for industrial production. Studio Tools, Alias, Rhinoceros, Solidworks, and Ashlar Graphite will be taught. Particular attention will be paid to the integration of skills taught in this class with manual drafting skills.

INDI 281
CAD and CAID
Three Credits

In CAD and CAID II, students will be taught either Alias, a 3-D modeling and rendering program using Silicon graphic workstation (SGI), the IRIX operating system and the Alias studio package, or Solidworks, a 3-D parametric modeling and surfacing program. Through sequences of tutorials, students will develop familiarity with these programs. Through the use of these programs in the execution of a studio project, they will have direct experience in their application within a design process.

INDI 300
Industrial Design Studio 5
Six Credits

This studio course draws upon all skills and knowledge that students have acquired in studio to date. Employing a design process taught in their sophomore year students will develop mass-produced products for use by individuals in private life. Projects will include furniture, lifestyle accessories and electronics, as well as industry-sponsored collaborations. In this class students will research new materials and technologies and apply them in their designs, which in turn must address issues of utility, market niches, trends, inclusive design, sustainability and functionality.

INDI 301
Industrial Design Studio 6
Six Credits

This studio course continues the efforts of INDI 300, drawing upon all the skills and knowledge that students have acquired in studio to date. Employing a design process taught in the sophomore year students will develop mass-produced products for use by individuals in private life. Projects will include furniture, lifestyle accessories and electronics, as well as industry-sponsored collaborations. In this class students will research new materials and technologies and apply them in their designs, which in turn must address issues of utility, market niches, trends, inclusive design, sustainability and functionality.

INDI 310**Contextual Research Methods****Three Credits**

This course is about understanding people, and understanding the culture in which design solutions exist. Students experience various contextual research methods, including Contextual Inquiry, Interviews, Focus Groups, and Questionnaires, and develop and practice unique and innovative user research methodologies. Through these techniques, they learn how to synthesize large quantities of user research, and allow research to drive design.

INDI 311**Rapid Prototyping II****Three Credits**

This course builds upon the curriculum of Rapid Prototyping and is an individualized studio-based course in which students will combine traditional construction and rapid prototyping. Each student will produce short runs of a product designed for mass production in the Core Studio.

INDI 315**Sustainable Practice****Three Credits**

This studio focuses on the goals and principles that frame a sustainable approach to design practice. From discussions, lectures and studio exercises, students will be introduced to the environmental issues raised in materials, production methods, distribution, use, and disposal involved in the products they design. In addition, human, business, institutional, political and cultural factors that pertain to the impact of design will be discussed.

INDI 316**Business Practices****Two Credits**

This course will focus on business practices that impact industrial design industries. Topics to be covered will include: team practices, organizational structures, market size, penetration and shares, competitive analysis, product line up, licensing, copyrights, patents, intellectual property, pricing and branding. Students will also be introduced to the development process and the uses and implementation of business plans.

INDI 400**Senior Design Project I****Six Credits**

Students will engage in a two-semester long process, based upon professional practices. The process will result in the development and prototyping of a complex, mass-produced product. Design processes employed in earlier courses will be applied in the ideation, research, design documentation, and prototyping of the new product. Investigation of design trends and market research will be undertaken as students work toward an innovation in their designs.

INDI 401**Senior Design Project II****Six Credits**

This course is a continuation of work begun in the first semester. Students continue a process, based upon professional practices that will result in the development and prototyping of a complex, mass-produced product. Design processes employed in earlier courses will be applied in the ideation, research, design documentation, and prototyping of the new product. Investigation of design trends and market research will be undertaken as student work toward an innovation in their designs.

INDI 410**Portfolio Studio****Three Credits**

This studio will focus on the preparation and refinement of a portfolio that encompasses the student's work within the program and any other distinguishing activity. The goal will be the production of a refined, multifaceted presentation of the student's goals and creative vision and his or her ability to engage in professional practice.

INDI 480**Internship****Three Credits**

All students will be required to take part in a professional internship that employs a wide range of skills and knowledge developed in this degree program. Each student will work with a department advisor to fully realize the potential of this experience.

INTE 110**Principles and Fundamentals of Design****Three Credits**

This is an introductory course that presents the basic elements and principles of design. Focusing on the study of human perception, dimension, and spatial activity requirements, students will work on problem identification, research methods and sources, and the parameter of appropriate design solutions.

INTE 115**Color Application Theory****Two Credits**

This course introduces the student to color theory and its relationship to graphic and tridimensional composition. A systematic approach to selecting interior color is offered. In addition, students will develop coloring techniques for visual representation, rendering, and illustration.

INTE 150**Interior Design Studio 1****Three Credits**

This studio course introduces students to the design process, problem solving, small-scale one-space spatial organization, anthropometrics, and presentation techniques. Through lectures and design exercises, students will develop concepts to achieve interior design goals and apply theoretical knowledge and technical skills to their interior design solutions as they work on a variety of professionally relevant interior design projects.

INTE 151**Interior Design Studio 2****Three Credits**

This studio course builds up the skills developed in Interior Design Studio I. To continue to develop these skills, students will be given a series of projects of increasing complexity, but at an elementary level. This course will also focus on the study of historical precedents and research methodology as fundamental parts of the design process.

INTE 210**Introduction to CAD and Computer Presentation****Three Credits**

This course will introduce the use of computer-aided design and other industry related software, as standard tools for interior design illustration, drafting, and design development. Students will develop the skills and technical knowledge for the development of two-dimensional drawing and three-dimensional modeling of building interiors.

INTE 220**Textiles, Interior Materials, Finishes and Specifications****Three Credits**

This course examines the functional and aesthetic properties of specific finishes for a given interior. It will also present materials in terms of history, uses and characteristics, ranging from wood, concrete, ceramics, metals, plastics, textiles and composites. Through lectures, demonstration, specific exercises and hands-on examination, students will be introduced to manufacturing techniques involved in the design and construction specifications of interior details and finishes.

INTE 225**Textiles Components and Standards****Two Credits**

The objective of this course is to introduce students to the types of textiles, fabrics and, their components, as well as to the nature of synthetic and natural fabrics and their characteristics. Content includes discussion of yarns, fabrics, finishes, design methods, aesthetic applications, specifications, and their compliance to building codes and regulations.

INTE 240**Plastics and Decorative Arts for Interior Design****Three Credits**

This course introduces students to the examination of current use of plastic and decorative arts in the interior environment. Students will be introduced not only to current trends in style, art objects, contemporary artists and expressions, but also to the relationships and interconnections between current trends and the development of "taste" over the last years.

INTE 250**Interior Design Studio 3****Three Credits**

Through lectures, design exercises, pin-ups, and desk critiques, students will continue to develop skills in the design process. Topics include programmatic concerns involved in residential, commercial, and institutional interior design projects. Students will develop projects at an intermediate level of complexity, emphasizing professional applications and the role of the interior designer as an environmental problem solver.

INTE 251**Interior Design Studio 4****Three Credits**

This studio course builds upon knowledge and skills learned in Interior Design Studio III. Students will incorporate the skills learned and will continue to develop them through design projects of increasing complexity. These projects will be carried out by students working individually and in teams.

INTE 310**Building Codes and Standards****Three Credits**

This course focuses on the study of physical requirements and code restrictions and how they form an integral part of the design criteria of every building project. Students will be introduced to the history of building regulations and learn how codes were developed, organized, and designed to secure uniformity and protect the public's interest, health, safety, and welfare.

INTE 320**Furniture Design****Three Credits**

This course introduces students to the design process as it applies to furniture, focusing on furniture ergonomics, materials, construction and manufacturing techniques, and design. Students will research selected topics and design seating, work-service pieces, and cabinetry. Emphasis will be placed on the design process, detailing, documentation, and presentation techniques.

INTE 330**Lighting Design Studio****Three Credits**

This course offers a comprehensive study of the possibilities of lighting as one of the primary elements of the interior environment. Students will be introduced to various topics that influence lighting design decisions, such as properties of materials as they relate to light, codes and laws, lighting technologies, electricity and electrical distribution systems, and their application in the execution of a studio project.

INTE 340**Building Systems and Construction Methods****Three Credits**

This course introduces students to structural principles and construction methods of buildings. Ranging from concrete construction, prefabricated modules, wood and metal structures, students will familiarize themselves with these systems in order to make design decisions for the creation of an interior environment. In addition, they will study mechanical systems, such as ventilation, air conditioning, plumbing, and electricity, and the integration of these systems as design elements.

INTE 350**Interior Design Studio 5****Six Credits**

This studio course draws upon all the skills and knowledge that students have amassed to date. Students will deal with advanced problems in interior design, developing designs to the highest level of detail, integrating building systems, lighting, interior finishes, and colors. Energy conservation, sustainable materials, the psychological impact of spaces, and the meaning of place are important issues in this course.

INTE 351**Interior Design Studio 6****Six Credits**

Built upon knowledge and skills acquired in Interior Design Studio 5, this course emphasizes individual competence in the total design process. Students will be encouraged to make knowledgeable decisions to produce solutions reflecting a high level of achievement.

INTE 400**Senior Design Project I****Six Credits**

Students will engage in a two-semester long process, based upon professional practices. The goal is the development of an interior design project. Students are required to develop and submit a programmatic project proposal, with the approval and guidance of the Senior Design Project Committee and faculty. Emphasis is placed on a high degree of complexity and challenge within the design project.

INTE 401**Senior Design Project II****Six Credits**

This studio serves as the second part of a two-studio sequence dedicated to the development and production of a major interior design project. Students continue the design project through the conventional phases of design development, documentation, and presentation. A written research component must accompany the drawings, as well as models and other presentation techniques.

INTE 410**Portfolio Studio****Three Credits**

This studio will focus on the preparation and refinement of a portfolio that encompasses the student's work within the program and any other distinguishing activity. The goal will be the production of a refined, multifaceted presentation of the student's goals and creative vision and his or her ability to engage in professional practice.

INTE 420**Internship****Three Credits**

All students will be required to take part in a professional internship that employs a wide range of skills and knowledge developed in this degree program. Each student will work with a department advisor to realize the potential of this experience fully.

LAND 100**Landscape Architecture Design I: Design Principles and Graphic and Visual Communication****Three Credits**

This course offers an introductory overview of design fundamentals and the elements that comprise the basic units of the visual image. The course aims to involve the student on creative two-dimensional and three-dimensional projects. It includes an introduction to techniques of landscape architectural diagrams, plans and sections, manual drafting and design drawing skills, with an emphasis on the development of basic drafting capacity and graphic presentation literacy. It also includes an introduction to three-dimensional drawing: axonometric, perspectives, plus the use of architectural models as design tools. In addition, it provides a basic approach to shades and shadows (black and white) as well as color rendering techniques.

LAND 101**Landscape Architecture Design II: Planting Design: Residential and Small Scale Projects****Three Credits**

This course treats topics of residential and small scale project design and master planning. It also includes a serious assessment of plant materials as well as architectural materials and graphic presentation.

LAND 110**Introduction to Landscape Architecture: Reading The Landscape****Three Credits**

The course is an introduction to the program as well as to information about recent topics related to the curriculum. It presents the discipline through the analysis of the built environment and ecological aspects, as well as through cultural and social issues. A variety of design issues are addressed through historical examples including the role of the Landscape Architect throughout history and how it has evolved. Topics related to the built environment and its effects on the natural systems are discussed including principles of sustainability, as well as land use plans, policies and strategies to improve urban concerns that impact quality of life. The course includes an approach to perception and how individuals construe and interpret the natural landscape. Topics include the landscape in art and literature, visual assessment techniques, use of maps, field sketching and photography.

LAND 150**Introduction to Site Analysis and System Technology****Three Credits**

The course centers on discussions and project-based investigations of site inventory and analysis of existing

conditions as well as grading, vegetation and drainage principles in landscape architecture projects.

LAND 200**Landscape Architecture Design III****Three Credits**

The course is a Landscape Architecture Design studio where the student is required to creatively develop recreational, institutional, commercial and/or residential facilities projects applying design principles learned and assessed in LAND 101.

LAND 201**Landscape Architecture Design IV****Six Credits**

This course prepares the students to extensively explore the design process through spatial solutions. This learning experience includes topics on natural systems, such as land forms, water, vegetation, wildlife, and soils, as well as climate and its interaction with grey infrastructure, such as roads, buildings and utilities. Commercial and institutional design, as well as planning resource analysis and planting design are also approached. Projects will emphasize the principles of sustainable design solutions.

LAND 210**Introduction to CAD for Landscape Architecture****Three Credits**

The course is an introduction to Computer-Aided-Design (CAD) as a drafting and representation technique. The students will learn how to create landscape architectural drawings; use layers, dimension, line types and color to display drawings for plotting; use commands to draw and edit objects; and develop a symbol library. They will be working on plans, sections, elevations and site contours.

LAND 211**CAD for Landscape Architecture****Three Credits**

In this course students will complete a typical design problem utilizing the Computer-Aided-Drawing (CAD) method and other software programs used in the landscape architecture industry. They will develop a two and three-dimensional set of drawings as part of a construction drawing set. In addition, they will be developing renderings and three-dimensional presentations.

LAND 250**Landscape Construction Materials and Methods****Three Credits**

The course is an introduction to the properties and production on man-made landscape building materials such as concrete, wood, and steel, among others. It includes an exploration of the performance of materials in exterior applications, construction detailing, recyclable materials, and its application in sustainable design.

LAND 251
Site Design
Three Credits

This course will study the aspects of land manipulation and consideration of earth bound natural and constructed elements in landscape design, contours, landform, grading design, hydrography, drainage principles and computations, as well as cut and fill calculations. Topics in site ecology and microclimate, and how these influence the design will be discussed. Plant material identification and assessment topics will also be discussed.

LAND 300
Landscape Architecture Design V
Six Credits

This course offers a study of mixed-use projects. It focuses on communities' issues and individual privacy. It also treats topics of town and city planning, neighborhoods, circulation patterns for public, private and pedestrian movement, family dwellings and open green spaces such as: parks, recreational facilities, squares and plazas, and green corridors. These projects are of regional significance; they emphasize green infrastructure solutions, taking into consideration the role of ecology.

LAND 301
Landscape Architecture Design VI: Urban Forest
Issues and Planning
Three Credits

The course centers on the design of large scale projects. Emphasis is on urban forest, large scale institutional, commercial or mixed use locations. The objective is to accentuate the benefits of the urban forest. The design and planning process focuses on how valuable and vital the urban forest and green spaces are for communities. The topics convey the beneficial attributes for health improvement, crime reduction, pollution related illnesses' and improvement of quality of life, as they are an inspirational validation.

LAND 340
Codes, Regulations, Ethics and Professional Practice
Three Credits

This course offers an overview of the regulations and legal aspects in the practice of landscape architecture. Issues of code compliance, standards, regulations, ethics, licensure, practice types, professional services, business development, contracts, and project management will be addressed. Students will explore different roles and responsibilities and develop a project as a landscape architecture firm.

LAND 350
Methods for Regional Landscape Design
Three Credits

This course focuses on the study of regional landscape design methods, their performance for sustainable design and the implementation of green infrastructure or green corridor. Topics emphasize the different alternatives in methods available. It also includes a detailed discussion of plants materials and how these are affected by different climates and environments.

LAND 351
Technology in Construction Documents
Three Credits

This course focuses on a detailed discussion and analysis of the development of the construction documents process through the study of simple structures pertinent to the landscape design. These include bridges, retaining walls and, pools, among other. The students will learn how to prepare detailed specification documents, working drawings, detailed drawings, and document layouts. The principles, theory and calculations of irrigation and lighting design are also studied. A portfolio of work is expected at the end of the semester.

LAND 400
Senior Design Project I
Six Credits

Based upon professional practices, students will begin a process, that will result in the development of a landscape architecture design. Design processes employed in earlier courses will be applied in the ideation, research, design documentation, and implementation of the landscape project. Investigation of design trends and market research will be undertaken as students work toward an innovation in their designs.

LAND 401
Senior Design Project II: Thesis Studio
Six Credits

This course is a continuation of the work begun in the previous semester (LAND 400). Based upon professional practices, students begin a process, based upon professional practices, that will result in the development of a landscape architecture design. Design processes employed in earlier courses will be applied in the ideation, research, design documentation, and implementation of the landscape. Investigation of design trends and market research will be undertaken as students work toward an innovation in their designs. A written report is required at the end of the semester.

LAND 410
Portfolio
Three Credits

This studio will focus on the preparation and refinement of a portfolio that encompasses the student's work with in the program and any other distinguishing activity. The goal will be the production of a refined, multifaceted presentation of the student goals and creative vision and his or her ability to engage in professional practice. The student will also learn to prepare a resumé, presentations, and a letter of preparation. The student is presented and coached on interview techniques, preparation of design competition packages and a preview of the licensing exams.

LAND 440
Internship: Practicum
Three Credits

All students will be required to take part in a professional internship that employs a wide range of skills and knowledge developed in this degree program. The course centers on off-campus professional practice under the supervision of a licensed landscape architect or related practitioner. A minimum of twelve weeks-part-time supervised employment is required. Each student will work with a department advisor to fully realize the potential of this experience, either in a landscape architecture industry or firm, or giving landscape architecture professional services in a product realization.

SEDE 200
Material Survey and Properties I
Three Credits

This seminar course will introduce students to the history, uses, and characteristics of materials ranging from woods, metals, and ceramics, to plastics, industrial textiles and composites. Through research assignments, selection exercises, lecture demonstrations, and hands-on examination, students will be introduced to the world's material culture, its history, application, and impact.

SEDE 300
Material Survey and Properties II
Three Credits

This course builds on the curriculum of Material Survey and Properties I, and provides more in-depth analysis of material properties and their uses. Through lectures and research projects student will deepen their knowledge of material, paying particular attention to the way they behave when utilized with various material processes.

WEDE 100
Introduction to the Internet and XHTML
Three Credits

In this course, a number of topics are discussed in detail: computers versus software, performance issues, types of Internet connections, safety, security troubleshooting, composing effective mail, net etiquette, organizing information, introduction to e-commerce, customizing tools, chat and online synchronous communications, forums, and blogs. Also covered are: basic design publishing languages, such HTML and XHTML. Web design and publishing concepts will be introduced.

WEDE 200
Web Design and Graphics
Three Credits

This course focuses on the principles of Web usability, client purpose and needs as key elements in successful Web Design. Simplicity of design is introduced as a practical web design principle. Some of the topics covered are age loading time, graphics design for the Internet, writing for the web, document size and readability, fonts for the web, color schemes and visual impact, and site architecture vs. content. Students will be introduced to some software tools and effective web site navigation strategies.

WEDE 250
Web Design and Graphics Studio 3
Three Credits

The student begins the course learning the fundamentals of digital imaging; audio is combined with Web technologies. This course will also introduce the student to interactive media authoring, video technology, learning programming and scripting techniques using Flash, JavaScript and ActionScrip for design, animation, and data handling. A study of 2D and 3D animation using computer modeling and animation software program as the primary tool. This course will emphasize the creation of animated sequences and GIF animation for multimedia applications.

WEDE 260
Web Design and Graphics Studio 4
Three Credits

This course will teach the student through the methods used in dynamic websites' integration. Will create content types and management, social media and mobile applications.

WEDE 270
Internship
Three Credits

All students will be required to take part in a professional internship that employs a wide range of skills and knowledge developed in this degree program. Each student will work with a program advisor to fully realize the potential of this experience in a web design industry.

WEDE 280
Portfolio Studio
Three Credits

This studio will focus on the preparation and refinement of a portfolio that encompasses the student's work with in the program and any other distinguishing activity. The goal will be the production of a refined, multifaceted presentation of the student goals and creative vision and his or her ability to engage in professional practice.

SCHOOL OF NATURAL SCIENCES AND TECHNOLOGY

The School of Science and Technology at Universidad Ana G. Méndez-Recinto de Gurabo responds to the educational needs of a society undergoing rapid economic growth and technological development. The School provides a rich learning environment in which students may pursue programs of higher education that will advance their career objectives, while at the same time instilling the motivation to continue to learn and grow intellectually throughout life

It is the mission of the School to foster liberal education, to encourage the generation of knowledge and to contribute to the well-being of the community. The School promotes lifelong learning, research, social and professional responsibility, and growth. To these ends the School challenges students to think critically and intuitively, recognize and value diverse perspectives, and to solve problems creatively and with perseverance.

Three majors in natural sciences are offered: general science, biology (with tracks in microbiology, medical sciences and biotechnology), and chemistry. Each major offers basic courses as well as specialized and advanced courses in biology, chemistry, physics, and mathematics. A variety of electives are offered to ensure a well-rounded and complete education.

The objectives of the School are to:

1. Develop within graduates a broad proficiency in scientific knowledge and professional competence.
2. Provide high quality academic and practical training that will enhance the learning experience.
3. Develop in graduates the ability to think and analyze solutions for contemporary scientific problems using the scientific method.
4. Promote and develop research at all levels.
5. Prepare students to use modern technology and instruments in their careers.
6. Establish joint research projects with other institutions, national laboratories and industries, promoting diversity among students and faculty.
7. Foster lifelong learning and intellectual growth.
8. Instill in graduates a sense of values, which will foster responsible participation in civil and public affairs.

SPECIALIZED ACCREDITATION

The bachelor's degree in Sciences with concentration in Chemistry is member of de American Chemical Association since September 2016.

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN BIOPHARMACEUTICAL TECHNOLOGY

The biopharmaceutical technology program enables our graduates to opt for jobs in both manufacturing and biotechnology companies, with an emphasis on industry trends and the latest technology available to develop advanced medicines that improve human health. The student receives extensive training in science and regulations applicable to the biotechnology and pharmaceutical process.

ASSOCIATE DEGREE IN SCIENCE IN FOOD TECHNOLOGY AND SAFETY

The Associate of Science program in Food Technology and Safety allows students to understand the processes, regulations and science related to the manufacturing of foods and food preservation. Alumni will be able to work in the food industry or in the government agencies and will be able to make decisions regarding the safety of food products. Students will apply their knowledge in their practicum.

BACHELOR DEGREE IN SCIENCE WITH CONCENTRATION IN BIOLOGY

This program prepares competent professionals with an integral education in which the student acquires fundamental knowledge in the natural sciences and specializes in biology. During his academic development, the student acquires skills that prepare him to integrate into the labor world, whether in industry, organizations or research; And to continue graduate studies. In addition, this curriculum prepares the student with the fundamental knowledge that a biologist must possess

BACHELOR'S DEGREE IN SCIENCE WITH CONCENTRATION IN CHEMISTRY

The chemistry program prepares students in the analysis and solution of chemical problems. Alumni receive training in the core areas of chemistry with emphasis in academic research. Courses are aligned to the requirements of the American Chemical Society (ACS). Alumni will be able to work at industry, research laboratories, governmental agencies, forensic laboratories and other chemistry-related scenarios.

**BACHELOR'S DEGREE IN SCIENCE WITH CONCENTRATION
IN BIOTECHNOLOGY**

This program allows our students to understand the natural world and obtain knowledge and skills in the different areas of biotechnology. It enables the student to face the challenges of the modern professional world of the country's emerging biotechnology industry. Our students will be able to work in agencies related to the environmental area, research laboratories, industries or school teachers.

BACHELOR'S DEGREE IN SCIENCE WITH CONCENTRATION IN MEDICAL TECHNOLOGY

The Bachelor of Science with a Major in Medical Technology and a Post Baccalaureate Certificate in Medical Technology is targeted to attract students interested in studying a career that will prepare them to help in the solution of health problems. Physicians base about 70 percent of their diagnosis and treatment decisions on the results of laboratory testing. Graduates from this program will be prepared to work in the clinical laboratories in hospitals and medical centers; pharmaceutical industry in quality control and microbiology labs, research and biotechnology; government crime labs, accreditation offices, environmental technology, veterinary medicine and lab information systems; humanitarian work in the Peace Corps, Project Hope and medical missionary workers. Many medical technology degree graduates assume positions as laboratory directors and healthcare supervisors.

Program Requirements:

- High School transcripts of credits with a grade point average of at least 2.50 on a 4.0 scale
- Results of the College Entrance Examination Board (CEEB).
- Students will be evaluated annually.
- Students must complete 109 credits of the first three years, according to the curriculum established by the school.

Medical Technology Professional Phase:

- After completing 109 credits (after three years of undergraduate education), students must apply for admission for the professional phase.
- The student must maintain a minimum 2.5 grade point average.
- Students must have passed with a grade of C the following courses: Biology I and II, Human Biology I and II, Microbiology, Immunology, Cellular Biology or Biochemistry, Parasitology, General Chemistry I and II, Analytical Chemistry, Pre-calculus, Calculus I, Physics I and II and Organic Chemistry I y II.
- Students must have a clean record.
- Students must submit the required documentation.
- Students will be responsible for dates and meetings which shall participate for admission to the professional phase.
- Oral interview and an essay to be performed during the evaluation process.
- Four letters of recommendation from science and/or math professors.
- Students will be admitted to the professional stage if they meet the pre-requirements and subject to the

assessment of the Evaluation Committee of the School of Natural Science and Technology.

- Whether a student meets the requirements does not guarantee admission to the program.
- Students not admitted to the professional phase, have the option of completing a degree in Biology. They must complete the required courses in the program.

BACHELOR'S DEGREE IN SCIENCE WITH CONCENTRATION IN MEDICAL TECHNOLOGY

Total Credits	155
General Education Courses	43
Core Courses	40
Required Courses in Biology	26
*Specialization Courses	26
Clinical Practice	20

*The student must have approved 1,040 hours

General Education Courses (43 credits)

ENGL 152	Fundamentals of Reading and Writing	3
ENGL 153	Advanced Communicative English	3
ENGL 231	Research and Writing	3
HUMA 111	Civilizations and Universal Culture I	3
HUMA 112	Civilizations and Universal Culture II	3
MATH 152	Pre-Calculus	4
MATH 152L	Pre-Calculus Lab	0
GESC 105	Freshman Seminar	3
GESC107	Introduction to Computers for Science Students	3
GESC 264	Introduction to Scientific Research	3
SOSC 111	Individual, Community, Government and Social Responsibility I	3
SOSC 112	Individual, Community, Government and Social Responsibility II	3
SPAN 152	Fundamentals of Reading and Writing	3
SPAN 250	Writing Techniques	3
SPAN 255	Research and Writing	3

Core Courses (40 credits)

BIOL 203	General Biology I	3
BIOL 203L	General Biology I Lab	1
BIOL 204	General Biology II	3
BIOL 204L	General Biology II Lab	1
PHSC 203	General Physics I	3
PHSC 203L	General Physics I Lab	1
PHSC 204	General Physics II	3
PHSC 204L	General Physics II Lab	1
CHEM 203	General Chemistry I	4
CHEM 203L	General Chemistry I Lab	0
CHEM 204	General Chemistry II	4
CHEM 204L	General Chemistry II Lab	0
CHEM 221	Analytical Chemistry	3
CHEM 221L	Analytical Chemistry Lab	0

CHEM 351	Organic Chemistry I	3
CHEM 351L	Organic Chemistry I Lab	1
CHEM 352	Organic Chemistry II	3
CHEM 352L	Organic Chemistry II Lab	1
MATH 221	Calculus I	4
MATH 221L	Calculus I Lab	0

Biology Courses (26 credits)

BIOL 303	Human Biology I	3
BIOL 303L	Human Biology I Lab	1
BIOL 304	Human Biology II	3
BIOL 304L	Human Biology II Lab	1
BIOL 318	Parasitology	3
BIOL 318L	Parasitology Lab	1
BIOL 320	Microbiology	3
BIOL 320L	Microbiology Lab	1
BIOL 322	Immunology	3
BIOL 340	General Genetics	3
BIOL 350	Biochemistry	3

Or

BIOL 355	Cellular and Molecular Biology	3
BIOL 355L	Cellular and Molecular Biology Lab	1

Academic Session (26 credits)

MTEC 400	Introduction to laboratory management, education and bioethics	2
MTEC 401	Clinical laboratory testing instruments and molecular clinical analysis	2
MTEC 402	Clinical Parasitology and Clinical Virology	2
MTEC 404	Clinical Mycology	1
MTEC 406	Clinical Hematology and Hemostasis	4
MTEC 406L	Clinical Hematology and Hemostasis Laboratory	0
MTEC 408	Immunology and Clinical Serology	3
MTEC 408L	Immunology and Clinical Serology Lab	0
MTEC 410	Clinical Chemistry	4
MTEC 412	Urine Analysis and Body Fluids	1
MTEC 414	Clinical Bacteriology	4
MTEC 414L	Clinical Bacteriology Lab	0
MTEC 417	Immunoematology	3
MTEC 417L	Immunoematology Lab	0

Clinical Practice Session (20 credits)

MTEC 407	Hematology Practice	4
MTEC 415	Blood Bank Practice	3
MTEC 405	Clinical Microbiology Practice	4
MTEC 403	Parasitology Practice	1
MTEC 411	Clinical Chemistry Practice	4
MTEC 413	Urinalysis Practice	1
MTEC 409	Serology Practice	2
MTEC 416	Seminar I	1

POST-BACCALAUREATE CERTIFICATE IN MEDICAL TECHNOLOGY

Students who have begun studies at other institutions need to complete the following requirements:

- Student must have earned a baccalaureate degree in Sciences with a grade point average of at least 2.50.
- Students must have passed with a grade of C the following courses: Biology I and II, Human Biology I and II, Microbiology, Immunology, Cellular Biology or Biochemistry, Parasitology, General Chemistry I and II, Analytical Chemistry, Pre-calculus, Calculus I, Physics I and II and Organic Chemistry I y II.
- Students must have a clean record.
- Students must submit the required documentation.
- Students will be responsible for dates and meetings which shall participate for admission to the professional phase.
- Oral interview and an essay to be performed during the evaluation process.
- Four letters of recommendation from science and/or math professors.
- Students will be admitted to the professional stage if they meet the pre-requirements and subject to the assessment of the Evaluation Committee of the School of Natural Science and Technology.
- Whether a student meets the requirements does not guarantee admission to the program.
- Medical Technology courses from other institutions will not be accepted.

Graduation Requirements for the Baccalaureate and the Post-Baccalaureate in Medical Technology

- Students must complete all the courses required for the baccalaureate degree or the post-baccalaureate certificate with a minimum grade point average of 2.50.
- Students should obtain a grade of C or more in core and major courses.

Total Credits	46
Academic Session	26
Clinical Practice	20

Academic Session (26 credits)

MTEC 400	Introduction to Clinical Laboratory Administration and Bioethics	2
MTEC 401	Clinical Laboratory Instrumentation , Methodologies and Molecular Techniques	2
MTEC 402	Clinical Parasitology and Clinical Virology	2
MTEC 404	Clinical Mycology	1
MTEC 406	Clinical Hematology and Hemostasis	4
MTEC 406L	Clinical Hematology and Clinical Hemostasis Laboratory	0

MTEC 408	Clinical Immunology and Clinical Serology	3
MTEC 408L	Clinical Immunology and Clinical Serology Laboratory	0
MTEC 410	Clinical Chemistry	4
MTEC 410L	Clinical Chemistry Lab	0

MTEC 414	Clinical Bacteriology	4
MTEC 414L	Clinical Bacteriology Lab	0
MTEC 417	Immunoematology	3
MTEC 417L	Immunoematology Lab	0

Clinical Practice Session (20 credits)

The student must have approved 800 hours.

MTEC 407	Clinical Laboratory Practice- Hematology	4
MTEC 415	Clinical Laboratory Practice – Bank of Blood	3
MTEC 405	Clinical Laboratory Practice - Microbiology	4
MTEC 403	Clinical Laboratory Practice- Parasitology	1
MTEC 411	Clinical Laboratory Practice -Clinical Chemistry	4
MTEC 413	Clinical Laboratory Practice -Body Fluids and Urine Analysis	1
MTEC 409	Clinical Laboratory Practice - Serology	2
MTEC 416	Seminar I	1

**INTEGRATED BACHELOR/MASTER IN SCIENCE IN FOOD
TECHNOLOGY AND SAFETY**

The joined BS/MS program in Food Technology and Safety allows students to understand the processes, regulations and science related to the manufacturing of foods and food preservation. Alumni will be able to work in the food industry or in the government as inspectors or analysts and will be able to make decisions regarding the safety of food products. Students will apply the best available technology in their graduate research to propose solutions to contemporary problems of public health concern.

COURSE DESCRIPTIONS

(Courses marked with @ could be offered in both modalities, traditional or on-line.)

BIOL 100

Applied Microbiology

Three Credits

The course emphasizes the fundamental principles of microbiology and the role of microorganisms in industrial processes. Topics to be included are the characteristics, structure, function, and identification, use of the microscope and staining techniques, isolation of bacteria in pure cultures, handling cultures of aerobic and anaerobic bacteria, biochemical tests, automatic and semi-automatic techniques to identify bacteria cultures.

BIOL 100L

Applied Microbiology Laboratory

One Credit

Laboratory course aimed at students of the associated degrees programs, in which basic concepts of microorganisms (bacteria, viruses, fungi and protozoa) from its structure and physiology to applications that are currently used will be explore. Students will learn and practice aseptic techniques to handle and manipulate microorganisms, including the use of different equipment such as a microscope, incubators, colony counters, and culture transferring tools. Students will perform staining and other basic techniques for the study of microorganisms at the structural and metabolic level. Also, environmental factors affecting growth and development of microbial populations will be study. All activities are designed taking into account the safety of students and the environment and respecting ethical principles in the handling of microbial cultures.

BIOL 101 (for non-majors)

Introduction to Biological Science I

Three Credits

Study of the basic biological principles, using the levels of biological organization. The course studies the chemical context of life, the structure and function of macromolecules, the cell functionality and the principal metabolic process. The study of the human anatomy and physiology of circulatory, respiratory, digestive and urinary systems are covered.

BIOL 102 (for non-majors)

Introduction to Biological Science II

Three Credits

Second part of the Biological Science course, the study of the human anatomy and physiology of nervous, endocrine and reproductive systems. Also, an overview of animal reproduction and development. The study of Mendelian

inheritance and the molecular basis of inheritance. Finally an introduction to ecology, taxonomy and evolution.

BIOL 103 @

Survey of Biological Sciences

Three Credits

Science course that prepares the student to acquire the fundamental concepts of the Biology Science such as: matter characteristics, the cell, introduction to Physiology, Human Anatomy and introduction to genetics. Said course is offered to the Health Science students.

BIOL 200

Principles of Human Anatomy

Three Credits

The course is an introduction to the study of nervous, muscular, and osteoarticular systems. Emphasis is placed on the relationship of these systems to the development of language and speech.

BIOL 203

General Biology I

Three Credits

An introductory survey of current biological concepts for students majoring in the sciences. Emphasis will be placed on topics which include characteristics of living things, scientific method, biologically important compounds and molecules, cells, energy and metabolism, genetics, evolution and ethical aspects related to technology and scientific research.

BIOL 203L

General Biology I Laboratory

One Credit

Laboratory course to accompany BIOL 203. The course is a hands-on experience that enhance the lecture course. Topics studied are the scientific method, organic macromolecules, cytology, cell membrane transport processes, cell cycle, cellular metabolism: photosynthesis, cellular respiration, meiosis, mendelian genetics, molecular genetics and evolution.

BIOL 204

General Biology II

Three Credits

General biology course for natural sciences students. Include the following topics: biodiversity, basic concepts of anatomy and physiology of plants and animals, ecology and ethical aspects related to technology and scientific research.

BIOL 204 L
General Biology II Laboratory
One Credit

Laboratory course to accompany BIOL 204. The course is a hands-on experience that enhance the lecture course. Topics studied are: biodiversity, sistematics, compared anatomy and phisiology and ecology.

BIOL 230
Fungi and Mankind
Three Credits

The course covers fungi characteristics, diversity, and their impact on humanity. The main focus will be on the importance of fungi for humans and for ecosystems. In addition, concepts related to the fields of medicine and industry will be discussed.

BIOL 300
Microbiology for Health Sciences Students
Four Credits

The course of Microbiology for Health Sciences Students offers an overview of the world of microorganisms and the techniques to study them and focus on the relationship of microorganisms with human beings from the medical perspective. Course topics include the discussion of the basic features of microorganisms (e.g. fungi, algae, bacteria and viruses) and the fundamental concepts of microbiology areas such as: Bacteriology, Mycology, Virology, Parasitology and Immunology. The course emphasizes on pathogenic microorganisms and the diagnosis of infectious diseases. Also ethical issues are discusses and analyzed regarding the management, manipulation of microorganisms and the application of modern techniques to study them and health consequences.

BIOL 301
Introduction to Food Microbiology
Three Credits

Introductory microbiology course for students; interested in careers related to human health and the food industry. The course is aimed at students who do not possess a prior course of microbiology. The itinerary begins with the basics in Microbiology (diversity, classification, microbial growth). Be studied also issues aimed at understanding the interaction pathogen-host as: microorganisms with pathogenic potential, normal microflora, epidemiology, immunology and diseases. The course will be study issues related to the microorganisms of importance in the food (food spoilage, fermented foods and other products of microbial origin), regulations, practical problems and bioethics of the food industry. The course will analyze how microorganisms impact human health and the quality of the food using a practical approach with application to daily life and to the future profession of the student.

BIOL303
Human Biology I
Three Credits

The course integrates the study of the structure of the human organism, its development and histology, with the function of organs and systems. Also, issues related to health are discussed. Study of cellular concepts, histological structures, and of osteoarticular, muscle and nerve systems; emphasizing the value of life, human dignity, respect, integrity, justice and responsibility of every human being.

BIOL 303 L
Human Biology Laboratory I
One Credit

The laboratory experiments were design to enable students to learn human anatomy and physiology in a whole manner. Each laboratory experience and other activities were chosen to encourage students to think for themselves, take iniative and be responsible in their work. Focus in the ethics principles involoved in the study of human biology.

BIOL 304
Human Biology II
Three Credits

The course integrates the study of the structure of the human organism, its development and histology, with the function of organs and systems. Also, issues related to health are discussed.Emphasis in sensorial organs and endocrine,cardiovascular,limphatic,respiratory,digestive,uri nary and reproductor system.; emphasizing the value of life, human dignity, respect, integrity, justice and responsibility of every human being.

BIOL 304 L
Human Biology Laboratory II
One Credit

The laboratory experiments were design to enable students to learn human anatomy and physiology in a whole manner. Each laboratory experience and other activities were chosen to encourage students to think for themselves, take iniative and be responsible in their work. Focus in the ethics principles involoved in the study of human biology.

BIOL 307
Neurobiology
Three Credits

This course is an introduction to the organization and function of the nervous system. Focuses on neuroanatomy, cellular organization and the basic organization of the brain into neural systems.

BIOL 310
Introduction to Animal Behavior
Three Credits

Introduction to animal behavior, emphasizing the evolution, neurophysiology, genetic, ecology, behavioral development, as well as behavioral patterns, mechanisms, functions and learning processes related to behavior and human ethology. It will discuss some aspects of the correct scientific and ethical use of experimental animals.

BIOL 312
Zoology
Three Credits

Study of different animals groups with emphasis on taxonomy, morphology, physiology, ecology, evolution and an integrated ethical vision.

BIOL 312 L
Zoology Laboratory
One Credit

Laboratory exercises will consist of an overview of animal characteristics, surveys of diversity within animal groups and dissections of representatives of the major animal groups.

BIOL 313
Human Anatomy and Physiology
Three Credits

The course integrates the study of the structure of the human organism, its development and histology, with the function of organs and systems. Also, issues related to health are discussed. Study of cellular concepts, histological structures, and osteoarticular, muscle and nerve systems; emphasizing the value of life, human dignity, respect, integrity, justice and responsibility of every human being. This course is designed primarily for students majoring in natural sciences professions, pre medical, pre odontology etc.

BIOL 313L
Human Anatomy and Physiology Lab
Three Credits

The laboratory provides the opportunity to learn the structure of the human body, its development and histology, besides the functioning of organs and systems. The laboratory will provide an enriching experience and a valuable opportunity to reinforce the knowledge that will implement in a professional level. Upon completion students will understand how the anatomy and physiology of the human body work together. Besides the laboratory course focuses students in Human Biology I to value life, human dignity, respect, integrity, justice and responsibility of every human being.

BIOL 314
Human Anatomy and Physiology II
Three Credits

The course integrates the study of the structure of the human organism, its development and histology with the function of organs and systems and how they work together. Health-related issues are discussed. Endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary and reproductive systems are discussed, emphasizing the importance to value life, human dignity, respect, integrity, justice and responsibility of every human being. This course is designed primarily for students majoring in natural sciences professions, pre medical, pre odontology etc.

BIOL 314L
Human Anatomy and Physiology II Lab
One Credits

This laboratory course provides experiences that allow students to understand the concepts of human anatomy and physiology of the various systems such as the endocrine, cardiovascular, respiratory, digestive, urinary and reproductive. Includes histology and dissection of components of each system. Laboratory exercises allow the development of skills in the use of equipment, interpretation of results and show the relationship between anatomy and human physiology. Laboratory work includes observation, dissection, microscopy and experimental demonstrations of concepts discussed in class. Focuses students to value life, human dignity, respect, integrity, justice and responsibility of every human being.

BIOL 315
Biostatistics
Three Credits

Introduction to the study of data collection, data grouping, data analyses and interpretation of biological data. Understanding of basic probability concepts and probabilistic distribution. Understanding of fundamental statistical tools for the construction of graphs and tables. Understanding of key concepts such as central tendency parameters, dispersion parameters, hypothesis development, types of hypotheses, types of error in hypothesis decision, hypothesis testing.

BIOL 317
Bioinformatics
Three Credits

A practical "hands-on" course in Bioinformatics that will emphasize how to use computers and the web, as tools to analyze and represent large collections of biological sequence and structure data.

BIOL 318**Parasitology****Four Credits**

Introduction to parasitology studying aspects of taxonomy, ecology, evolution, clinical and epidemiology of parasites important to humans. The course pretends to cover general parasitology, but taking into special account those parasites prevalent in the Caribbean, most specifically in Puerto Rico and to the ethical principles that guide the technical practices for the study of parasites.

BIOL 320**Microbiology****Three Credits**

General microbiology course is aimed at students of biology and General Science interested in learning about the microbial world. In this introductory course students will study the morphology, taxonomy, ecology and the fundamental characteristics of microorganisms (e.g. bacteria, fungi, algae, protozoa and viruses) physiology. It also explores the basic techniques of enrichment, selection, isolation, enumeration and identification of microorganisms. The course not only discusses the ability of microorganisms to cause diseases, but also highlights its role in research, the ecosystem and the economy. Also, ethical issues will be discussed and analyzed regarding the management, handling of microorganisms and the application of modern techniques and their impact on health, the environment and the economy. Three hours of lecture and four hours of laboratory per week.

BIOL 320L**Microbiology Laboratory****One Credit**

Laboratory experiences which address topics including sterile technique, microscopy, identification of microorganisms, microbial metabolism.

BIOL 321**Food Microbiology****Three Credits**

The course discusses the physical and chemical factors affecting the microbiology of food such as pH, activity of water, oxidation-reduction potential and nutrients. The course studies the different groups of microorganisms such as: fungi, bacteria and viruses and the interaction of these with food (e.g. grain, red meat, beef and chicken, seafood, vegetables and dairy products). Selected topics of the course are aimed to understand how pathogens cause disease, how food poisoning is transmitted and how can it be controlled. The course emphasized the industrial aspect and the role of microorganisms in the manufacture of foods such as bread, dairy products, alcoholic beverages, etc. Current food microbial issues related to food preservation and safety regulations are discussed in the course. During the course

students will explore and analyze ethical issues related to the management and manipulation of microorganisms with a special interest in the manufacture of food, public health, microbiological sanitation and future challenges.

BIOL 321L**Laboratory of Food Microbiology****One Credits**

The laboratory of food microbiology is designed for biology students interested in microbiology and the food industry. The student must have basic knowledge of microbiology, metabolism and organic chemistry. In conjunction the class and the laboratory course will allow the student becomes familiar with the microbiology from a practical point of view related to their professional interests. All activities are designed to develop to the fullest the capabilities of the student in: the use of the scientific method to solve problems, work in group, ethics, organization, interpretation and analysis of the obtained data. The laboratory experiments will arouse the interest of the students in this branch of Microbiology discussing: basic techniques in Microbiology (microscopy, isolation and manipulation of microorganisms), identification of microorganisms, chemical and physical parameters affecting microbial growth, description of metabolic capabilities, food spoilage, preparation of foods and fermented beverages, distinction between microorganisms with pathogenic capacity, isolation of microorganisms from different food products.

BIOL 322**Immunology****Four Credits**

In the Immunology course fundamental concepts are discussed in which historical, evolutionary, cytological, anatomical, physiological and clinical aspects of immunology are explore. The course examines how the body responds and what are the immunological mechanisms employed against the infections by bacteria, viruses, and other foreign materials. Also, aspects about cellular mediating immunity in health and diseases are discussed. The topics in the course cover fundamental aspects of molecular and cellular immunology areas and present applications and technologies used in modern medicine. The course raises ethical issues related to the implementation and development of technologies for the control of infections and invasions of hazardous biological agents and other foreign materials.

BIOL 323
Industrial Microbiology
Four Credits

This course deals with the use of microorganisms in industry, particularly in the manufacture and quality control of different pharmaceutical products. It also provides the student with an introduction to bioprocess, regulations, GMP, and GLP.

BIOL 325
Botany
Three Credits

The General Botany course presents basic concepts of plant biology focusing on the structure, function, reproduction and evolution of plants. Issues related to the role of plants in the environment and human activities will also be discussed. During the course students will discuss issues and current ideas on plants and agriculture, horticulture, medicine, biotechnology, ecology, conservation and environmental issues. Students will identify and analyze ethical concerns about the consequences of scientific research, the protection of plant diversity and its habitats in the development of life and the environment.

BIOL 325 L
Botany Laboratory
One Credit

Observation and study of cyanobacteria, algae, fungi and plants with emphasis in angiosperms.

BIOL 329
General Ecology
Four Credits

This course provides a comprehensive introduction to the contemporary science of ecology - the study of the relationships between organisms and their biotic and abiotic environments. The course provides students with experience in research study design, data collection and analysis and addresses theoretical and applied questions central to contemporary ecology at the level of the individual, population, community and ecosystem, with interpretation through an evolutionary perspective. Additional emphasis is placed on the ecological habitats of Puerto Rico and contemporary issues in conservation biology locally and world-wide.

BIOL 329 L
General Ecology Laboratory
One Credit

The course addresses theoretical and applied questions central to contemporary ecology through a combination of laboratory and field studies, at the level of the individual, population, community and ecosystem, with interpretation through an evolutionary perspective. Additional emphasis is

placed on the ecological habitats of Puerto Rico and contemporary issues in conservation biology locally and world-wide. Duration of the course is approximately fifteen weeks (45 hours). Three hours of laboratory and/or field exercises per week will address the factors influencing the abundance and distribution of living organisms.

BIOL 331
Developmental Biology
Three Credits

The study of the organismal, cellular and molecular aspects of animal and plant development.

BIOL 331L
Developmental Biology Laboratory
One Credit

A hands-on approach study of animal and plant development that will help students to remember and to understand the theory and principles taught in the lecture course.

BIOL 332
Human Embryology
Three Credits

Study of pre-natal normal development from the fertilized egg to a multicellular entity. Also includes the origin and causes of embryo malformations.

BIOL 332L
Human Embryology Laboratory
One Credit

A hands-on approach study of animal and plant development will help students to remember and to understand the theory and principles taught in the lecture course.

BIOL 333
Introduction to Marine Biology
Four Credits

Study of the biology of marine plants and animals, and the relationship with the environment. Introduction to the study of marine provinces and coastal ecosystems of Puerto Rico and the world, promoting the ethical principles. Three hours of lecture and a three-hour laboratory per week.

BIOL 333L
Marine Biology Laboratory
One Credit

Study of the biology of marine plants and animals, and the relationship with the environment. Introduction to the study of marine provinces and coastal ecosystems of Puerto Rico and the world.

BIOL 335**Biodiversity and Conservation****Three Credits**

The course examines the genetic and ecological principles and the concepts of island biogeography as they relate to endangered species conservation, the management of small populations and the value of protected areas. Strong emphasis is placed on sociological, economic and political components of species conservation.

BIOL 336**Tropical Ecosystem Management****Three Credits**

Fundamental concepts about natural resources conservation and management within the scenario of the ecosystems of Puerto Rico. The course will emphasize environmental problems associated to pollution, urban sprawling, energy provision, and collective indolence. The sustainable development paradigm will be analyzed.

BIOL 340**Genetics****Four Credits**

The course deals with principles of heredity with emphasis on structure of genetic material, mechanism of transmission, cytonetics, evolution, and population genetics.

BIOL 345**Evolution****Three Credits**

Introduction of living things evolution, focusing on genetic basis of evolution, genetic variation, reconstruction of phylogeny, natural selection, origin of species, geological history, human, cultural and future evolution and intervention of modern technologies in the evolutionary processes. Discussion of present and future ethical conflicts in the evolution direction.

BIOL 347**Diagnosis and Control of Food Plant Diseases****Four Credits**

The course centers on the study of methods and techniques used in the diagnosis and control of diseases of tropical food plants. The identification to genera and sometimes to species of plant pathogens will be conducted using symptoms and signs under field conditions, as well as through microscopic observations and the use of taxonomic keys in the laboratory. Special attention will be devoted to control measures for important plant diseases. One hour of lecture and six hours of laboratory per week.

BIOL 349**Pathology of Food Plants****Four Credits**

The course centers on the study of diseases of food plants. Emphasis will be placed on diseases of tropical food plants; their hosts, symptomatology, etiology, disease cycle, epiphytology, distribution, economic importance and control. Three hours of lecture and three hours of laboratory per week.

BIOL 350**Biochemistry****Three Credits**

The course covers the chemistry and metabolism of organic molecules and their relation to the regulation and processes of organisms, cells, and sub-cellular components.

BIOL 351**Practical Internship in Biology I****Three Credits**

The course is a practical internship in another university institution, private industry, or government agency. A minimum of sixty (60) hours is required.

BIOL 352**Practical Internship in Biology II****Three Credits**

The course is a practical internship in another university institution, private industry or government agency. A minimum of sixty (60) hours in required.

BIOL 355**Cellular and Molecular Biology****Three Credits**

The basic properties of cells, organelles and molecules that determine their structures and functions are discussed. Also examines the properties of the system of differentiated cells and tissues. Students are introduced to important issues related to cell biology, microbiology, biochemistry, genetics and biotechnology. During the course students will identify and analyze ethical problems related to research and application of modern techniques in molecular and cellular biology.

BIOL 355L**Cellular and Molecular Biology Laboratory****One Credit**

Students will be introduced to current molecular and cellular biology procedures in a hands-on environment. Each laboratory experience and other activities have been chosen to encourage students to think for themselves, take initiative and be responsible in their work as part of ethical principles. Emphasis will be placed on developing good laboratory practices, including critical thinking, proper technique, data

record-keeping, and scientific writing. Different practical approaches such as cellular growth, plasmid DNA isolation, and restriction digest analysis, proteins analysis, DNA cloning, and DNA fingerprinting using the polymerase chain reaction (PCR) will be explored.

BIOL 357

Special Topics in Biology

Three Credits

The course centers on discussion of topics in modern biology. A topic will be discussed each semester, using recent scientific publications. Topics may include Biotechnology, Conservation Biology, Biodiversity, Applied Microbiology, and Applied Ecology, among others.

BIOL 365

Undergraduate Research in Biology I

Three Credits

During the course of Undergraduate Research students will learn the basic concepts of biology research using the scientific method. The course provides the opportunity for the students to play an active role in developing a project plan, gathering relevant information, organizing and synthesizing information to answer the research questions posed, interpreting the implications of the information generated by the research, applying generated information in practice and disseminating results. These activities will be undertaken through the learning of basic laboratory techniques, as well as the compilation and analysis of scientific information. During the course students may address ethical issues that are aimed to create a responsible conduct in research. The work schedule should last one semester, and should not exceed nine (9) hours per week.

BIOL 366

Undergraduate Research in Biology II

Three Credits

The course is a continuation of scientific laboratory and/or field research. The weekly schedule will be agreed upon by each student and the professor chosen to supervise the research. The work schedule should not exceed nine (9) hours per week and should last one semester.

BIOL 367

Basic Biostatistics

Three Credits

The course is a study of biological data collection, grouping, analysis, and interpretation. Students will understand fundamental statistics techniques for table and graph presentations, measures of central tendency and dispersion, probability distribution, experimental design hypothesis testing, linear regression and contingency test. They will also practice the application of a computer package to perform

analyses. Each student will be required to select and analyze real life science data for a project.

BIOL 410

Introduction to Biotechnology

Three Credits

The course is intended primarily for senior undergraduate students. It provides an overview of industrial biotechnology and will include lab safety, ethical aspects, and documentation.

BIOL 430

Biology of Birds (Ornithology)

Three Credits

The biology of birds, including their functional morphology, physiology, behavior, ecology, biogeography, evolution, taxonomy, natural history and conservation, with emphasis on New World families, including the study of bird internal anatomy and external morphology, ecology and behavior, as well as taxonomy and field identification. Independent projects emphasize research skills.

BIOL 430L

Biology of Birds (Ornithology) Lab

One Credits

Laboratory and field component for the study of the biology of birds, including their functional morphology, physiology, behavior, ecology, biogeography, evolution, taxonomy, natural history and conservation, with emphasis on New World families. The laboratory includes examination of bird internal anatomy and external morphology, ecology and behavior, as well as taxonomy and field identification. Independent projects emphasize research skills.

BIOL 460

Techniques in Biotechnology

Three Credits

The course will provide the students with general concepts and procedures employed in a Biotechnology laboratory. Emphasis in the procedures and equipment used to separate, purify and quantify biological molecules (proteins, lipids, and nucleic acids) using hands-on experiences. Some of the techniques are: spectrophotometry, electrophoresis, chromatography, PCR, cloning, ELISA, and sequencing.

BIOL 482**Biodiversity and conservation****Three Credits**

The course examines the genetic and ecological principles and the concepts of island biogeography as they relate to endangered species conservation, the management of small populations and the value of protected areas. Strong emphasis is placed on sociological, economic and political components of species conservation.

BIOT 101**Introduction to Biotechnology Industry****Three Credits**

This course provides an overview of industrial biotechnology, pharmaceutical technology, agro-technology and chemical processes. In addition, the course will include laboratory safety and documentation.

BIOT 103**Cell and Molecular Biology for Biotechnology****Three Credits**

Basic course in the Biotechnology specialization that prepares the students with the basic knowledge in cell and molecular biology. The course studies from the structure of important organic and inorganic molecules found in living organisms to the types of cells and their metabolic functions. The student will be trained in the laboratory with the necessary skills and techniques to study biology.

BIOT 103L**Cell and Molecular Biology for Biotechnology Lab****One Credit**

The student will be trained in the laboratory with the necessary skills and techniques to study cell and molecular biology, applied to biotechnology.

BIOT 210**Regulations And Good Manufacturing Practices****Three Credits**

This course covers in general the current regulations that apply to Puerto Rico including overview of OSHA, PROSHA, and EPA/EQB with major focus on FDA rules and regulations. Course emphasis will be on Good Manufacturing Practices (cGMP's), quality awareness, record integrity, safety, recall cases, liabilities and basics in auditing documentation, 483's, business impact in dollars and jobs.

BIOT 231**General Manufacturing Biotechnology I****Three Credits**

This course covers the basic principles and experiences related to cell culture, sterilization, media preparation and recovery.

BIOT 231L**General Manufacturing Biotechnology I Lab****One Credit**

This laboratory is a practical complement of the course General Manufacturing Biotechnology I where experiences in the manipulation of cell cultures are presented, the growth-influencing factors, quality control measures in the manufacturing processes, cleaning protocols, hygiene and sterilization, documentation and practical applications of bioinformatics. Activities will be conducted in a weekly three hours period.

BIOT 240**Validation****Three Credits**

The course provides an introduction to the topics of installation qualification, operational qualification, performance qualification, process qualification, cleaning validation, sterilizing filter validation, SPC and continuous process validation, validation testing, preventive maintenance and principles of metrology. Laboratory validation project is included in the course.

BIOT 250**General Manufacturing Biotechnology II****Three Credits**

This course covers the basic principles and experiences related to cell culture, microbes, fermentation, production, recovery, and packaging.

BIOT 250L**Manufacturing Biotechnology Laboratory II****One Credit**

The course complements the General Manufacturing Biotechnology II course where experiences in the management of cell cultures will be presented, factors that affect their growth, quality control measures in manufacturing, cleaning protocols, hygiene and sterilization, document management and bioinformatics applications. Activities will be done using 3 hours periods of laboratory work per week.

BIOT 365
Research in Biotechnology I
Three Credits

The course provides the opportunity for the students to play an active role in developing a project plan, gathering relevant information, organizing and synthesizing information to answer the research questions posed, interpreting the implications of the information generated by the research, applying generated information in practice and disseminating results. These activities will be undertaken through the learning of basic laboratory techniques, as well as the compilation and analysis of scientific information. During the course students may address ethical issues that are aimed to create a responsible conduct in research.

BIOT 366
Research in Biotechnology II
Three Credits

The course emphasizes in an independent research supervised by a mentor.

BIOT 410
Introduction to Biotechnology
Three Credits

This course is designed to introduce students to methodologies and approaches in the biotechnology industry. The course focuses on the scientific principles and the applications of microbiology, cell biology, immunology, and molecular biology in the medical, pharmaceutical, chemical, and agricultural industries.

BIOT 450
Bioprocess Engineering
Three Credits

Topics to be covered include: basic instruction in plant design and support equipment in industrial biotechnology, general building design, water systems, HVAC, steam generators for sterilization, and biowaste decontamination systems.

BIOT 460
Biotechnology Techniques
One Credit

The course will provide the students with general concepts and procedures employed in a Biotechnology laboratory. Emphasis in the procedures and equipment used to separate, purify and quantify biological molecules (proteins, lipids, and nucleic acids) using hands-on experiences. Some of the techniques are: spectrophotometry, electrophoresis, chromatography, PCR, cloning, ELISA, and sequencing.

CHEM 101
Applied Chemistry
Four Credits

The class is designed to provide students with a general knowledge of matter, chemical compounds and molecules, gases and solutions, preparation of solutions and dilutions, solubility, density, colligative properties, acids and bases and in general the main inorganic and organic chemical processes used in industry. This course will complement the student's knowledge by using modern laboratory techniques including measurements of pH and conductivity, UV-visible and fluorescence spectroscopy.

CHEM 101L
Applied Chemistry Lab
One Credit

Introductory laboratory to chemistry where the following topics are covered: matter, pure substances, mixtures, periodic table, chemical separations, chemical reactions, calorimetry, kinetics, physical and chemical properties, states of matter. The laboratory will strengthen the basic volumetric, measurement and use of basic equipment techniques and skills, as long as safety rules.

CHEM 203
General Chemistry I
Four Credits

Emphasis in this course is aimed to the study of the states of the matter, atomic and molecular structures, and nomenclature of inorganic compounds, classification of elements in the periodic table, chemical bond, chemical equations and reactions, stoichiometry. In the laboratory students are trained in the use of basic laboratory techniques such as the use of volumetric equipment, titration and qualitative analysis. Students are taught to keep a good laboratory notebook and safety on the laboratory.

CHEM 203L
General Chemistry I Laboratory
Zero Credits

General Chemistry Laboratory I with emphasis on the phenomenological description of matter, properties and changes of pure substances and mixtures, solutions, calorimetry, gases and chemical reactivity. Filtration and titration techniques are studied. Also, the laboratory works with dimensional analysis, chemical nomenclature and proper ethical scientific documentation.

CHEM 204
General Chemistry II
Four Credits

Emphasis in this course is aimed to the study of intermolecular forces, properties of solids and liquids, solutions: types and properties, way to express concentration of solutions, chemical kinetics, chemical equilibrium, acid-base reactions, thermodynamics and electrochemistry including discussion of oxidation-reduction reactions. In the laboratory students are trained in the use of basic laboratory techniques such as the use of volumetric equipment, titration and qualitative analysis. Students are taught to keep a good laboratory notebook and safety on the laboratory.

CHEM 204L
General Chemistry II Laboratory
Zero Credits

This course provides to the student a complement for general overview of the basic concepts of General Chemistry at experimental level. As a continuation course, the material here discussed is within the context of the conference course General Chemistry II. The laboratory presents to the student the opportunity for analyzing periodical relationships on the main groups chemical elements, activity series of metals, molecular structures (Lewis structures) and relate them with the concept of molecular geometry. The students will have also hands on manipulation of the concept of chemical solutions, concentration units, colligative properties of solutions, volumetric and potentiometric titrations, studying the kinetics of a chemical reaction, the concept of chemical equilibrium (Le Chatelier's Principle), solubility product, electrochemical cells, and Nerst's equation.

CHEM 221
Analytical Chemistry
Three Credits

Principles of quantitative analysis. Material presented includes gravimetric, volumetric, spectrophotometric and electrochemical methods of analysis. Separation techniques including chromatography are discussed. Statistical analysis of data is discussed. Theoretical explanations of neutralization (acid-base), solubility of precipitates, reactions of complex formations, oxi-reduction reactions, spectroscopy, and graphical methods to visualize the chemistry involved are emphasized.

CHEM 221L
Analytical Chemistry Laboratory
One Credit

Principles of experimental analysis. Material presented includes the methods most widely used in gravimetry, volumetry, spectrophotometry and electrochemistry. Separation techniques including chromatography are used

along this course. Statistical analysis of data is also used and applied in the different chemical reactions studied (neutralization, solubility of precipitates, reactions of complex formation, oxi-reduction reactions and spectroscopy).

CHEM 224
Fundamentals of General Chemistry
Three Credits

Study of the principles of General Chemistry designed for students of health related professions. The course includes topics about measurement systems, matter and energy, chemical reactions, atomic and molecular structure, chemical bonds, radioactivity, stoichiometry, solutions, liquid and gas states, chemical equilibrium, chemical kinetics, acids and bases.

CHEM 224L
Laboratory of Fundamentals of General Chemistry
One Credit

The knowledge of this course contribute to that the student interprets and verifies the main definitions, laws and theories of the general chemistry (matter, properties of matter, elements and compounds, chemical reactions, solutions, acids and bases, and radiations) and in its practical application. Also to dominate the main experimental techniques and the work with the measuring instruments and to develop experimental skills that allows him to acquire new knowledge.

CHEM 225
Fundamentals of Organic and Biological Chemistry
Three Credits

Study of the principles of Organic and Biological Chemistry designed for students of health related professions. The course includes topics about structure and reactions of saturated organic compounds: alkanes, cycloalkanes and haloalkanes. Structure and reactions of unsaturated compounds: alkenes, alkynes and dienes. Stereochemistry. Structure and reactions of aromatic compounds. Structure and reactions of organic compounds containing oxygen, nitrogen and sulfur: alcohols, ethers, aldehydes and ketones, carboxylic acids, amines, amides, sulfur compounds and thiols. Structure and functions of lipids, aminoacids, proteins, enzymes and nucleic acids. Metabolic pathways and energy production.

CHEM 225L
Laboratory of Fundamentals of Organic and Biological Chemistry
One Credit

This course provides to the student a complement for general overview of the basic concepts of organic molecules at structural level, general physical and chemical properties of organic molecules are observed and compared with

properties of inorganic compounds. The chemical and physical properties of organic molecules possessing different functional groups are discussed at experimental level; these functional groups include alkanes, alkenes, alcohols, carbonyl compounds, and some biomolecules containing these functional groups such as carbohydrates and lipids. The concept of chemical synthesis is introduced through the preparation of the common analgesic acetylsalicylic acid (aspirin), and the preparation of soap using several triacylglycerides.

CHEM 311

Descriptive Inorganic Chemistry

Three Credits

Study of the chemistry of all of the elements and their compounds, based on the discussion of their structures. The formation of the different types of bondings is discussed from the point of view of the Molecular Orbital and Valence Shell theories. The concept of symmetry and point group are introduced and applied to the molecular geometry, and vibrational spectra of inorganic compounds. The physical and chemical properties associated with the electronic configuration of atoms and molecules are studied. The elements and their compounds are described by families, generalizing and explaining their periodic tendencies. The electronic structure, bonding, as well as the spectroscopical and magnetic properties of the transition elements are discussed, along with their applications to other systems.

CHEM 311L

Inorganic Chemistry Laboratory

One Credit

This course provides to the student a complement for general overview of the fundamentals concepts of Inorganic Chemistry at experimental level. The knowledge of this course contribute to that the student interprets and verifies the main definitions, laws and theories of the inorganic chemistry providing him with laboratory experiences in which the use of modern techniques for the synthesis of inorganic materials, the separation and purification techniques, as well as the instrumental techniques more commonly used in inorganic chemistry are introduced. It also allows students to dominate the main experimental techniques and the work with the measuring instruments and to develop experimental skills that allow him to acquire new knowledge.

CHEM 351

Organic Chemistry I

Three Credits

The Organic chemistry course studies the carbon and hydrogen compounds and its derivatives with others heteroatom such as: halogens, oxygen, nitrogen, sulfur, phosphorus and some metals. This course discusses the nomenclature and physical properties of the different

families of organic compounds. The synthetic methods and the reactions of the alkanes, alkenes, cycloalkanes, alkynes, dienes, alkyl halides, aromatic compounds, and derivatives are also presented. Emphasis is done the reactions mechanisms, specially: SN1, SN2, E-1, E-2, double and triple bonds additions, electrophilic aromatic substitutions in benzene and its derivatives, alcohols dehydration, aldol condensation, Cannizzaro reaction, epoxidation of alkenes, Sandmeyer reaction and Cope and Hofmann amines elimination.

CHEM 351L

Organic Chemistry I Laboratory

One Credit

This course will teach the student the basic technique use in an organic laboratory, such as purification, separation and characterization of organic compounds using their physical constants. The student will be trained in the correct use of the different equipments and glassware use in an organic chemistry laboratory. He will also carry out the synthesis of organic compounds with a variety of functional groups related to those discuss in the chemistry 351 class session.

CHEM 352

Organic Chemistry II

Three Credits

The Organic chemistry course studies the carbon and hydrogen compounds and its derivatives with others heteroatom such as: halogens, oxygen, nitrogen, sulfur, phosphorus and some metals. This course discusses the nomenclature and physical properties of the different families of organic compounds. The synthetic methods and the reactions of the alkanes, alkenes, cycloalkanes, alkynes, dienes, alkyl halides, aromatic compounds, and derivatives are also presented. Emphasis is done the reactions mechanisms, specially: SN1, SN2, E-1, E-2, double and triple bonds additions, electrophilic aromatic substitutions in benzene and its derivatives, alcohols dehydration, aldol condensation, Cannizzaro reaction, epoxidation of alkenes, Sandmeyer reaction and Cope and Hofmann amines elimination. With respect to the compound structure, the course discusses the structural, geometrical and optical isomerism, emphasizing the conditions that have to be fulfilled for them to exist. The spectroscopic method of analysis and identification of functional group and structure assignment are discussed. Specifically IR, UV, NMR and MS spectroscopy.

CHEM 352L**Organic Chemistry II Laboratory****One Credit**

This laboratory course emphasizes the synthesis of different functional groups discussed in the Organic Chemistry course 352. Through these reactions the student can understand better the reactions discussed in class and the specific reagents and conditions required in each case. In this laboratory session two spectroscopic methods are discussed: Infrared and Nuclear Magnetic Resonance spectroscopy and its importance in the structure determination and the presence of organic functional groups.

CHEM 355**Practical Internship in Chemistry I****Three Credits**

Practical internship in another university institution, private industry or government agency. A minimum of sixty (60) hours is required.

CHEM 356**Practical Internship in Chemistry II****Three Credits**

The course is a practical internship in another university institution, private industry or government agency. A minimum of sixty (60) hours is required.

CHEM 365**Undergraduate Research in Chemistry I****Three Credits**

This is a scientific laboratory and/or field research. The weekly schedule will be agreed upon by each student and the professor chosen to supervise research. The work schedule should not exceed nine (9) hours per week and should last one semester.

CHEM 366**Undergraduate Research in Chemistry II****Three Credits**

This is a scientific laboratory and/or field research. The weekly schedule will be agreed upon by each student and the professor chosen to supervise research. The work schedule should not exceed nine (9) hours per week and should last one semester.

CHEM 383-384**General Biochemistry I and II****Eight Credits**

The course deals with basic concepts of thermodynamics and their biochemical applications. It includes systematic discussion of biological macromolecules, such as proteins, enzymes, nucleic acids, carbohydrates and lipids structure, characterization, physical properties and methods of isolation. The pathways for the degradation and

biosynthesis of the major classes of biological molecules will be discussed. The bioenergetic aspect of metabolism will be discussed first within the context of the whole catabolism and anabolism, the individual pathway, and enzymatic reactions. Three hours of lecture and three hours of laboratory per week.

CHEM 385**General Biochemistry****Three credits**

This course provides to the student a general overview of the basic concepts of Thermodynamics and their biochemical applications. In addition, systematic discussion of biological molecules, such as amino acids, proteins, nucleic acids, carbohydrates, and lipid structures, are discussed. Characterization, physical properties, and method of isolation of these molecules are studied. The pathways for the degradation and biosynthesis of the major classes of biological molecules will be discussed. The bioenergetic aspects of metabolism will be discussed first within the context of the whole catabolism and anabolism, individual pathways and enzymatic reactions.

CHEM 390**Spectroscopic Methods for Organic Chemistry****Three Credits**

This course serves to the students as training for the interpretation of spectroscopic data in the identification of molecular structures. This is an introductory course, where the fundamentals of Nuclear Magnetic Resonance (^{13}C -NMR and ^1H -NMR), Infrared Spectroscopy (IR), Ultraviolet Spectroscopy (UV), and Mass Spectrometry (MS) are discussed. When possible, practical experiments will be combined with theoretical discussion, in order to provide the students with more effective training.

CHEM 411**Advanced Inorganic Chemistry****Three Credits**

The course is an advanced study of transition metal compounds. The electronic structure, bonding, as well as the spectroscopic and magnetic properties of the transition elements are discussed, along with their applications to other systems. Several aspects of bioinorganic chemistry are studied, particularly the function of inorganic elements and inorganic compounds in living systems. Supramolecular chemistry is also discussed.

CHEM 430**Instrumental Chemistry****Three Credits**

Introduction to principles that a scientist must know to understand and use more efficiently modern instrumentation. Study of the theoretical aspects and practical applications of modern instruments used for

chemical analysis. Includes study of Infrared, Ultraviolet-Visible and fluorescence spectroscopies. Also the different types of chromatography, atomic absorption and polarimetry. The methods based on the use of X-rays, mass spectrometry (MS), nuclear magnetic resonance (NMR), and scanning electron microscopy (SEM).

CHEM 430L

Instrumental Chemistry Laboratory

One Credit

Introduction to experimental principles that a scientist must know to understand and use more efficiently modern instrumentation. Study of the experimental aspects and practical applications of modern instruments used for chemical analysis, including infrared, ultraviolet-visible and fluorescence spectroscopies, different types of chromatography (HPLC, GC, GC-MS and TLC), atomic absorption, X-ray diffraction, nuclear magnetic resonance (NMR), and scanning electron microscopy (SEM).

CHEM 451

Organic Synthesis

Three credits

The course describes the synthesis of organic functional groups and carbon-carbon bond formation. It also focuses on different oxidation and reduction reagents and conditions, as well as on stereochemical principles. Emphasis is placed on manipulation of functional groups, application of reaction sequences for specific synthesis of compounds, such as reaction mechanisms stereochemistry, conformational considerations and strategies, in order to provide the student with the necessary tools for solving synthetic problems using the elements of organic chemistry. Retrosynthesis analysis is thoroughly discussed and is applied to the synthesis of known compounds.

CHEM 463

Physical Chemistry I

Three Credits

The course covers the basic principles and applications of thermodynamics of chemical systems. Calculations of thermodynamic magnitudes and functions in different processes are studied using the Principles and Laws of Thermodynamics. The concepts of temperature, work, heat, enthalpy, entropy, chemical equilibrium and ideal and real systems in gas and condensed phase are studied. It also analyzes chemical reactions under thermodynamics view, establishing considerations about the energetic balance, its spontaneity and extension, in which they take place. The studies of homogeneous and heterogeneous systems in which the phase changes of the substances take place are also in the core of this course.

CHEM 463L

Physical Chemistry I Laboratory

One Credit

Laboratory of thermodynamics, founded in the chemical equilibrium concept and surface chemistry. The course complements the theoretical discussions of the lecture with practical experiences, consolidating statistical analysis with good documenting practices. In this laboratory the nature of the gaseous state of matter, chemical equilibrium and the direction of chemical change are studied: calorimetry, enthalpy, equilibrium constants, solutions, phase changes, phase diagrams, partial molar properties and states and properties of matter.

CHEM 464

Physical Chemistry II

Three Credits

The Physical Chemistry II course is divided in two main topics: Quantum Mechanics and Kinetic. In the first topic introduces some of the basic principles of quantum mechanics. The concept of all properties of a system are expressed in terms of a wave function which is obtained by solving the Schrödinger equation will be studied. The calculations of molecules will make possible to understand the nature of the chemical bond. The application of quantum mechanics to spectroscopy, the study of the absorption and emission of electromagnetic radiation, will be treated at the end of this topic. The second topic is concerned with the rates and mechanisms of chemical reactions. The calculation of the rates of certain processes by use of a simple model of atoms and molecules in the gas phase for ideal and real gases will be elaborated.

CHEM 464L

Physical Chemistry II Laboratory

One Credit

Chemical kinetics evaluates the rate of chemical reactions and the plausible mechanism followed by these reactions. The laboratory experiences present different analytical techniques in the kinetics field, such as: colorimetric methods, initial rates method, method of isolation and chemical methods. A quantum mechanics activity is included to apply the particle in a box theoretical model when analyzing the light absorbance of polymethylene dyes.

CHEM 475

Preparation for Chemistry Licensing

Three Credits

This course is designed for chemistry students to succeed in the exams required by the State Department of Puerto Rico to grant the Chemist License. The course is a review of the main topics of General, Organic, Analytical and Physical Chemistry with emphases in the kind of questions that usually are presented in these exams. It also provides a

valuable global vision of the concepts already covered in the core courses of the program reinforcing the main capabilities a Chemist should have to work and succeed in its future professional life, including ethical behavior and stress management.

CHEM 481

Introduction to Computational Chemistry

Three Credits

The course covers the principles of quantum mechanics and statistical mechanics, with a specific focus on applications in chemistry. The course will provide a rigorous background for understanding modern quantum mechanical calculations. A major goal is to illustrate how theory and experiment work together in the development of a viable model for the nano-world of atoms and molecules. However, while the primary concern of this course is an operational mastery of fundamental principles, the rich historical and philosophical background of quantum theory will not be neglected. As in all Physical Chemistry courses at Universidad Ana G. Méndez-Recinto de Gurabo, development of problem solving and critical thinking skills are stressed.

CHEM 485

Electrochemistry

Three Credits

The Electrochemistry course discusses the theory and applications of electrochemical processes in solution and in the solid state. The first part of the course introduces some basic concepts and definitions, as well as the thermodynamics involved in electrochemical systems. Thermodynamic arguments will be used to derive expressions for the electric potential of cells and for solution-electrode interfaces. The course also covers the dynamic aspects of the electrochemical processes. Transport properties of electrolytes and the kinetics of electrochemical reactions will be discussed to explain the microscopic and macroscopic flux of electrons at the interface of an electrode and an ionic solution. The second part of the course will deal with the instrumental techniques used to perform electrochemical measurements. The fundamentals of these techniques will be explained in terms of the basic concepts discussed in the first part of the curriculum. Some applications, such as fuel cells, batteries, electrochemical sensors, catalysis, and corrosion will be presented in the last part of the course.

ENCH 358

Environmental Chemistry I

Three Credits

The course deals with basic principles of environmental chemistry. Topics include properties of chemical substances related to the environment, their transformation, degradation, and toxicity. Environmental toxicology principles and concepts are also introduced.

ENCH 359

Environmental Chemistry II

Three Credits

The course deals with characterization of specific contaminants. Natural environmental processes, including photosynthesis, atmospheric chemistry and soil contamination are also discussed.

ENCH 360

Environmental Analysis Techniques

Three Credits

The course covers the following topics: methods and techniques for the design and execution of sample plans in diverse environmental systems covering air, soil, and water; preservation methods and sample analysis considering physical, chemical and microbiological parameters, and interpretation of results.

ENCH 362

Environmental Geochemistry

Three Credits

The course deals with the application of quantitative methods and physical-chemical analysis to the study of the distribution and movement of chemical elements in geological processes. Emphasis is placed on the transport and fate of organic and inorganic pollutants in earth.

ENCH 363

Atmospheric Chemistry

Four Credits

The course is an introduction to the chemical and physical processes determining the composition of the atmosphere and their implications for climate, ecosystems, and human welfare. Emphasis is placed on how anthropogenic activity has affected those processes.

ENCH 367

Environmental Hydrogeology

Three Credits

The course is a survey of the geologic and hydrologic factors controlling the occurrence, movement, and chemical quality of ground water. Topics include physical, chemical, and biological characteristics of surface and subsurface water, aquifer characterization, runoff processes, fluvial processes,

water supply and consumption, contaminant transport, and remediation techniques.

ENCH 368
Environmental Research
Three Credits

The course centers on the study of basic concepts of research in environmental chemistry. Emphasis is placed on basic research techniques and the search for scientific information.

ENCH 370
Environmental Toxicology
Three Credits

The course centers on a study of the distribution of toxic agents in the environment. Emphasis is placed on the transport, bioaccumulation, degradation, and ecological effects of toxic agents.

ENCH 371
Environmental Microbiology
Four Credits

The course deals with interactions between microorganisms and naturally occurring polymers and how this relates to the degradation and persistence of environmental pollutants. Emphasis will be placed on microbial ecology, together with basic degradation processes and the ways in which they can be used in bioremediation strategies of contaminated aquatic and terrestrial systems.

ENSC 499
Fundamental of Environmental Sciences
Three Credits

An introductory course to the study of the environmental sciences. The course has been designed to provide students with basic information about the structure and function of natural ecosystems; the effect of human activities upon air, water, soil, flora and fauna; environmental pollutants and their effect upon human and environmental health; the paradigm of sustainable development and environmental ethics.

FOOD 101
Introduction to Food Technology
Three Credits

This is an introductory course for all first year science major students, which brings the general scope of food science and technology. The main focus of the course is the application of the basic sciences and technology to the study of the fundamental nature of foods and the principles of its processing. The course covers areas regarding the raw material, added value and processing. Part of the scope also covers the processing of different kinds of foods, such as fruits and vegetables, meats, drinks and candies. The course

also studies food safety laws, the federal agencies in charge of these laws, packaging and labeling of foods.

FOOD 201
Microbial Food Safety Hazards and Quality Control
Three Credits

The course is aimed at students interested in the study of diseases from a population-based perspective. The course begins with an overview of globalization and the epidemiology of foodborne diseases. The course describes the biotic and abiotic factors that affect disease rates, distribution and disease prevention. Current and statistical data on emerging diseases transmitted through food are also included.

FOOD 250
Food Safety and Protection related to Public Health
Three Credits

The course studies the relationship between food safety and protection related to public health. The course starts with a historical and political background that includes regulatory agencies and historical events or cases that impulse the creation of the HAACP. Provide the student with an introduction to the Hazard Analysis Critical Control Points (HACCP) principles and their importance in the prevention of biological, chemical or physical alteration of food. This is followed by the practical application of the HACCP; design, Implementation, Verification, and Maintenance for Ongoing Risk Management. In addition, the course provides up-to-date information on current topics in food safety regulations, issues and control of potential risks. It covers topics related to emerging foodborne pathogens (i.e., bacteria, viruses, protozoans and helminthes). Other topics covered are: virulence, pathogenesis, toxins production, epidemiology, sources of microorganism contamination, current technology and food safety prevention and control.

FOOD 300
Food Laws, Standards & Regulations
Three Credits

Federal, state and territories laws regulations and case law history affecting food production, processing, packaging, marketing and distribution of food and food products. History of food law, enactment of laws and regulations, legal research, and regulatory agencies.

FOOD 400**Food Biotechnology****Three Credits**

This course study origins of biotechnology, genetic manipulation of organisms involved in food manufacture. Include the different techniques of genetic and culture manipulation and transformations different pathways of food chain, and study the social and ethical issues related to biotechnology in food.

FSST 105**Introduction to Scientific Study****Three Credits**

This is a required course for all students entering the School of Science and Technology. It includes the development of techniques and skills required in scientific studies.

GESC 107**Introduction to the Computer and its Applications****Three Credits**

The course is an introduction to the use of the computer, the Windows operating system and Internet navigation. Students will use applications such as Word, Excel, and Power Point. Data handling and graphic presentations are stressed.

GESC 227**Environmental Health****Three Credits**

The course deals with health, the environment, and pollution. It includes an introduction to ecology, human activity in natural ecosystems, overpopulation, water and atmospheric pollution, solid waste, noise, and radiation.

GESC 264**Introduction to Scientific Research****Three Credits**

The course covers basic concepts of scientific research. Emphasis is placed on the application of the components of the scientific method. The course offers training in scientific literature searches, editing techniques, oral presentations, and poster presentations.

GESC 361-362-363-364**Seminars on Topics in Modern Science****One to Four Credits**

The course introduces the student to topics in modern science. Outstanding local and international scientists and professors will be invited. The course addresses specific needs of professional groups, such as public and private school teachers and other professionals. Credits vary from one to four depending on the hours. One semester each.

INSC 101**Integrated Sciences I****Three Credits**

This is a science course in which the student discovers basic principles of physical and earth sciences. It prepares students to take decisions and solve problems regarding the universe, their planet, their environment and surroundings. It provides students the skills they need to analyze published articles related to science discoveries. The development of scientific concepts is emphasized by means of the inquiry method, through interdisciplinary teaching and an integrated curriculum.

INSC 102 @**Integrated Sciences II****Three Credits**

This is a science course in which students discover basic principles of chemistry and biology sciences. It prepares students to make decisions and solve problems regarding the universe, their planet, their environment and surroundings. It provides then the necessary skills to analyze published articles related to science discoveries. The development of scientific concepts is emphasized by means of the inquiry method through, interdisciplinary teaching and an integrated curriculum. The course is offered to education students and to future elementary and secondary school teachers.

MATH 100 @**Basic Mathematics****Three Credits**

The course is an introduction to mathematics for students who need to improve basic skills. It covers fundamental operations with natural and cardinal numbers, fractions, and decimals; ratios and proportions; percents and measures. The course will be offered to students with CEEB Mathematics Achievement Test scores below 490, or scores on the Department's Placement Test below 70%. One semester.

MATH 107**Basic Fundamentals of Mathematics****Three Credits**

This course will develop basic mathematical competences in the following areas: arithmetic, algebra, geometry, probability, and statistics. The main topics covered are: arithmetic operations, equations and linear inequalities, area and perimeter of polygons and circles, Cartesian coordinates, similarity and congruence of triangles. Special emphasis is placed on problem solving.

MATH 121
Intermediate Algebra
Three Credits

This course covers factorization of polynomials, linear inequalities, problem solving; absolute-value equations and inequalities; operations and simplifications with algebraic fractions; linear equation graphics, linear equations systems and solution methods; graphics, substitution and elimination. Topics include inequalities for two variables and rational exponentials, as well as solution of radical expressions, equations involving radicals, and quadratic inequalities. Emphasis is on problem-solving.

MATH 125
Fundamental Topics in Mathematics I
Three Credits

This is a course for students of the School of Education. It includes number systems, theory of numbers, real number systems, basic concepts of algebra, linear equations and graphs, and financial mathematics.

MATH 126
Fundamental Topics in Mathematics II
Three Credits

This course includes problem-solving, set theory, logic, geometry, measurement, probability, statistics, theory of numbers, and fundamental topics for students of the Schools of Education, Humanities and Office Administration.

MATH 151
College Algebra
Four Credits

The course of College Algebra includes the following topics: functions and graphs, polynomial and rational functions, exponential and logarithmic functions.

MATH 151L
College Algebra Laboratory
Cero Credits

Practices and experiences of laboratory for the College Algebra course, which includes a review of intermediate algebra and the following topics: equations and inequalities, functions and their graphs, linear functions, polynomial and rational functions, exponential and logarithmic functions. equations and inequalities, graphs, functions, polynomial and rational functions, exponential and logarithmic functions, and systems of linear equations.

MATH 152
Trigonometry and Analytical Geometry
Four Credits

This course is a preparation for the differential and integral calculus in one variable. It is designed for students who plan to obtain a degree in science, mathematics, computer sciences, engineering, and mathematics education. The topics covered include trigonometric functions of real numbers and angles and their graphs, analytical trigonometry, applications of trigonometry, complex numbers and vectors, systems of linear equations, and analytic geometry.

MATH 152L
Trigonometry and Analytical Geometry Laboratory
Cero Credits

Practices and experiences of laboratory for the Trigonometry and Analytical Geometry course, which includes trigonometric functions of real numbers and angles and their graphs, analytical trigonometry, applications of trigonometry, complex numbers and vectors, systems of linear equations, and analytic geometry.

MATH 155
Pre-Calculus (Compendium)
Three Credits

This course covers the system of real numbers and its properties; properties of exponents; solution of inequalities (including absolute value quadratic and linear inequalities) and interval notation; solution of equations, relations, functions, graph properties of functions, rational functions, logarithmic and exponential functions; solution of linear systems of equations using determinants and matrices. Also covered are circular functions, properties and graphs; trigonometric functions, trigonometric identities and equation applications, problems using sine and cosine law; vectors and applications, complex numbers (geometrical representation and operations); polar coordinates and De Moivre's Theorem. Analytic geometry topics include circle, parabola, ellipse, and hyperbola, as well as axis notation and translations.

MATH 170
Basic Geometry
Three Credits

The course covers basic concepts of geometry for students of the International School of Design. This course covers basic concepts of plane and spatial geometry. Emphasis is placed on the use of the ruler, protractor and compass for diverse geometric constructions.

MATH 173
Plane and Space Geometry I
Three Credits

The course centers on basic concepts of geometry including the straight line, angles, triangles, elementary constructions. It includes demonstrations using postulates, definitions and theorems. Also included are the Theorem of Congruency, regular polygons, Pythagoras' Theorem and its applications.

MATH 174
Plane and Space Geometry II
Three Credits

The course covers circumference, areas, polygonal regions, plane Cartesian geometry, spatial geometry, solid bodies and surfaces, surface areas, volume, and basic non-Euclidean geometry.

MATH 199
Quantitative Methods I
Three Credits

Students will study the following topics: functions and their properties; linear and quadratic equations and their graphs; linear inequalities; quadratic inequalities; exponential and logarithmic functions; solution of systems of equations, and mathematical progressions.

MATH 200
Quantitative Methods II
Three Credits Hours

The course covers linear programming, the simplex method, limits, differential calculus, optimization and introduction to integral calculus.

MATH 215
Scientific Computer Programming
Three Credits

The course introduces science and mathematics students to computer programming. Topics include basic problem-solving skills, including translating problems into BASIC computer language for computer processing. The course includes explanations of the language of arithmetical operations. Three hours of lecture and two hours of laboratory per week.

MATH 221
Calculus I
Four Credits

This calculus course is an introduction to differential and integral calculus in one variable. It is designed for students who plan to obtain a degree in science, mathematics, computer science or engineering. The topics covered includes: the traditional treatment of the limit, the derivative as a rate of change, derivative of functions and techniques to calculate them, applications of the derivative, integration as the area under a curve or between curves in an interval,

integration of functions and the Fundamental Theorem of calculus.

MATH 221L
Calculus I Laboratory
Cero Credits

Practices and experiences of laboratory for the Calculus I course, which includes: the traditional treatment of the limit, the derivative as a reason for change, derivative of functions and techniques to calculate them, applications of the derivative, integration as the area under a curve or between curves in an interval, integration of functions and the Fundamental Theorem of calculus.

MATH 222
Calculus II
Four Credits

Integration of transcendental functions. Integration techniques. Applications of the definite integral. Indeterminate forms. Improper integrals. Sequences and series.

MATH 222L
Calculus II Laboratory
Cero Credits

Practices and experiences of laboratory for the Calculus II course, which includes: derivatives and integrals of transcendental functions. Integration techniques. Applications of the definite integral. Indeterminate forms. Improper integrals. Sequences and series.

MATH 223
Calculus III
Four Credits

This course includes vectors and geometry of space, vector functions, partial derivatives and multiple integrals.

MATH 223L
Calculus III Laboratory
Cero Credits

Practices and experiences of laboratory for the Calculus III course which includes: vectors and geometry of space, vector functions, partial derivatives and multiple integrals.

MATH 290
Theory of Numbers
Three Credits

This course covers divisibility, congruency, Gauss integers, and Diophantine equations. Course activities will center on proving theorems.

MATH 305
Probability and Statistics I
Three Credits

The course deals with basic principles of statistics: data collection and classification, measurement of central tendency, variance, probability and distribution (the normal, the Poisson, the binomial and others), sampling theory in finite populations, and principles of experimental design.

MATH 306
Probability and Statistics II
Three Credits

The course covers proof of hypothesis, students t-test, Z transformation, chi-square, differences of means, frequency distribution, analysis of variance (ANOVA), linear correlation, regression analysis and non-parametric statistics, as well as Mann Whitney, T-Test, and Sign Test.

MATH 313
Analytical Geometry and Calculus III
Three Credits

This course will cover the following topics: vectors, parametric curves, partial derivatives, and multiple integrals.

MATH 315
Computer Programming with Pascal
Four Credits

The course is an introduction to computer science for education students. Students will learn programming with Pascal. Lectures and laboratory.

MATH 325
Digital Computation
Three Credits

The course deals with basic and intermediate concepts of digital electronic circuits and their relation to computers. Digital and algebraic logic and their applications and concepts of memory are covered.

MATH 330
Data Structure
Three Credits

The course covers basic processes of the computer, including linear and orthogonal listings, chains and arrangements, tree storage and search techniques.

MATH 340
Discrete Methods
Three Credits

The course is designed primarily for science and education students majoring in mathematics. Topics include set theory, graph theory and combinational analysis as applied to computers. Group theory and Boolean algebra and their application to computers will also be discussed.

MATH 345**Abstract Algebra****Three Credits**

This is an introductory abstract algebra course for students specializing in mathematics. It covers sets, functions, binary operations, integers, groups, rings, domains, fields, and polynomials. Emphasis is placed on theorems and application problems.

MATH 350**Linear Algebra****Three Credits**

This course is for students specializing in mathematics. It covers two-variable linear equations systems, "n x m" linear systems, and homogeneous and heterogeneous systems. It includes matrix operations and vector spaces, as well as quadratic forms, linear transformation and linear programming.

MATH 355**Practical Internship in Mathematics I****Three Credits**

This is a practical internship in another university institution, private industry, or government agency. A minimum of sixty (60) hours is required.

MATH 356**Practical Internship in Mathematics II****Three Credits**

This is a practical internship in another university institution, private industry, or government agency. A minimum of sixty (60) hours is required.

MATH 365**Research in Mathematics I****Three Credits**

This course is a scientific laboratory and/or field research. The weekly schedule will be agreed upon by the student and the professor chosen to supervise research. The work schedule should not exceed nine (9) hours per week and should last one semester.

MATH 366**Research in Mathematics II****Three Credits**

This course is a scientific laboratory and/or field research. The weekly schedule will be agreed upon by the student and the professor chosen to supervise research. The work schedule should not exceed nine (9) hours per week and should last one semester.

MATH 367**Combinatorial Analysis****Three Credits**

The course covers fundamental concepts of all branches of combinatorial analysis. The course includes enumeration problems, counting equivalence classes, the principle of exclusion and inclusion, and generator functions. The course also deals with combinatorial structures, and applications of graph theory to computer science.

MATH 370**Numerical Analysis****Three Credits**

The course emphasizes algorithms in numerical analysis and their application to computer science. The course includes interpolation, non-linear equations, systems and approximation by polynomials, and integration.

MATH 395**Differential Equations****Three Credits**

The course covers ordinary differential equations and first and second order lineal equations, as well as special cases of superior order equations. It emphasizes applications in physics, chemistry and engineering.

MTEC 400**Introduction to Clinical Laboratory Administration and Bioethics****Two Credits**

This course will learn important concepts developed for the administration and supervision of clinical laboratories. It will emphasize the financial aspects, state and federal regulations, security, and tools to work together, with the public and special situations, ethics, statistical calculations and reporting of results. Also developed techniques for working aspects of education in their area of work.

MTEC 401**Clinical Laboratory Instrumentation, Methodologies and Molecular Techniques****Two Credits**

The course is an introduction to the use, practice and management of clinical laboratory equipment. It makes emphasis on developing the skills to handling specialized and computerized equipment and computerized as well as the methods and molecular tests used to detect various diseases.

MTEC 402**Clinical Parasitology and Clinical Virology****Two Credits**

The course presents the techniques used for identifying parasites through clinical laboratory methods. It makes emphasis in the samples analysis, handling, and processing. Studies parasite's life cycle and how it spreads. Methods and procedures for virus isolation, diagnosis and control for disease prevention, and clinical significance are presented. The importance of molecular techniques in the diagnosis of diseases caused by viruses or parasites will be discussed.

MTEC 403**Clinical Laboratory Practice – Parasitology****One Credit**

The student will practice in the area of parasitology management, analysis, identification results and will report importance for medical diagnosis. It will emphasize control and quality assurance in the clinical laboratory. Possible molecular techniques for identifying parasites discussed.

MTEC 404**Clinical Mycology****One Credit**

Specific study of the procedures used to isolate and identify fungal pathogens to humans. Diagnosis of diseases caused by fungi. Emphasis on clinical symptoms, treatment and epidemiology.

MTEC 405**Clinical Laboratory Practice - Microbiology****Four Credits**

The clinical rotation in microbiology provide the student the experience of using a variety of techniques to identify pathogens, including cultivation and isolation, direct examination, serology and the use of automated equipment. The student will also learn various staining procedures and will be trained in the correct procedure for interpreting studies of bacterial susceptibility. Emphasis on control and quality assurance in the clinical laboratory is made.

MTEC 406**Clinical Hematology and Hemostasis****Four Credits**

This course studies of blood cells in normal and abnormal conditions. Students will be instructed in the theory and practical application of hematology procedures including quality control, quality assurance, safety, manual methods and / or automated. Sequences maturation of blood cells is discussed. Normal morphology and abnormal morphology related illness will be appreciated. Theme coagulation procedures and practical applications will be presented. Includes laboratory exercises based on commonly performed manual and semiautomatic methods.

MTEC 406L**Clinical Hematology and Hemostasis Laboratory****Cero Credits**

The course provides the practical application of procedures for routine and special hematology, both manual and automated red blood and white blood cells. The sequence of cell maturation, their morphology and these will be discussed anomalies. Include practicing techniques in the area of coagulation and how are you will relate to various health conditions.

MTEC 407**Clinical Laboratory Practice - Hematology****Four Credits**

Rotation Hematology is the study of the blood and particularly its cellular components. Students begin their rotation familiar with the operation and theory of automated instrumentation. Emphasis is placed on the identification of white blood cells and the evaluation of the morphology of red blood cells by conducting differential manuals. Proper identification is essential for the accurate diagnosis of leukemia, anemia and infections. Instruments coagulation and coagulation tests are also studied. Students will practice in the areas of hematology and coagulation and acquire the skills needed to work in this area laboratory.

MTEC 408**Clinical Immunology and Clinical Serology****Three Credits**

This course covers the science of immunology and serology through the study of theories and processes related to natural body defenses. Included are the immune response, principles of antigen-antibody reactions, and the principles of serological procedures as well as quality control, quality assurance, and safety. This includes performance of serological procedures used to aid in the detection or diagnosis of certain diseases. Throughout this course, special emphasis is placed on correlating of laboratory results with the patient's probable condition.

MTEC 408L**Clinical Immunology and Clinical Serology****Laboratory****Cero Credits**

This laboratory course provides the practical application to serological methods used to assist in the detection or diagnosis of certain diseases. Emphasis will be placed on the correlation of laboratory results with patient likely conditions.

MTEC 410
Clinical Chemistry
Four Credits

The theory and application of chemical analytical procedures in the study of diseases both past and present. Students will analyze through biochemical methods, blood and other body fluids. They will learn to perform clinical tests to identify the carbohydrate and protein metabolism, acid - base balance, electrolytes, vitamins, and toxicology. Also they will learn about the analytical procedures and principles of lipids, lipoproteins, hormones, and porphyrins. Students will be instructed to interpret and correlate laboratory data using manual and automated procedures.

MTEC 411
Clinical Laboratory Practice - Clinical Chemistry
Four Credits

Rotation in the area of Clinical Chemistry is a learning experience based on work related to health that allows students to apply theory in specialized work, skills and concepts. Students will work with a variety of automated and semi-automated procedures, testing, safety, quality assurance in the clinical laboratory and everything related to clinical laboratory work. Direct supervision is provided by a clinical professional.

MTEC 412
Study and Analysis of Body Fluids and Urine
Analysis
One Credit

This course explains the basic concepts related to the physiology of the kidney and other body fluids. Students will learn the principles and procedures for the physical-chemical and microscopic analysis of urine, fecal heces and other body fluids are known urinary tract diseases, hereditary diseases and metabolic diseases. It emphasizes the comparison of normal samples and pathogens. Methods and equipment will be used to detect toxic chemicals in the urine.

MTEC 413
Clinical Laboratory Practice - Body Fluids and Urine
Analysis
One Credit

Students will learn about the physical, chemical, and microscopic examination of the urine samples. It will emphasize the procedures of macroscopic urinalysis and microscopic analysis. Students will work on automated instruments in the clinical area of urinalysis and additional prosecute other body fluids that are working in this area.

MTEC 414
Clinical Bacteriology
Four Credits

This course presents the bacterial nomenclature and pathogens in man. Developing skills for taking samples, handling and preservation is emphasized. Students will identify identity the morphological Characteristics of pathogens and know the culture media used in the tests of identification. Biochemical and immunological microorganism's ideas importance of clinical and molecular tests for Identifying bacteria tests are performed. Discussion of molecular tests for the diagnosis of infectious diseases.

MTEC 414 L
Clinical Bacteriology Laboratory
Cero credits

In this laboratory the students will apply the theory learned about the pathogenesis of microorganisms. Emphasis will be placed on the collection, handling, quality control, identification, susceptibility testing, automated testing and how to report the results. The utility of molecular samples and the importance of these in the early diagnosis of infectious diseases will be demonstrated.

MTEC 415
Clinical Laboratory Practice - Blood Bank
Three Credits

This rotation in the area of blood bank will provide the student with experiences in previous transfusion testing, including ABO and Rh testing, antibody detection, compatibility tests and procedures used in the identification of irregular antibodies. The student will be evaluated by strangers for identification purposes. Reactions to transfusion, ABO discrepancies and release of blood in emergency situations will be covered in this practice.

MTEC 416
Clinical Laboratory Practice - Case Studies of Clinical
Laboratory
One Credit

In this practice the practical and theoretical concepts of the profession of medical technologist explains. It will emphasize on case studies related to the profession. The student will submit a draft of current interest related to the profession. Topics related to this project include the methods of literature research, teamwork, evaluation of the impact on clinical outcomes and the analysis and implementation of clinical applications.

MTEC 417
Immunoematology
Three Credits

Study of blood groups, components used in transfusion, its collection and storage of these. Includes use of each and the

components according to the condition presented by the patient. Includes discussion of adverse reactions to transfusion and investigation of them. It covers the HLA system and its clinical significance, hemolytic anemia and autoimmune conditions newborn among others. The ethical and medical legal aspects will be emphasized in the area of transfusion services.

MTEC 417 L
Immunohematology Laboratory

Cero Credits

In this laboratory practices the routine procedures in blood banking, including blood group and Rh typing, antibody screenings, antibody identification, cross matching, elution and absorption techniques. Discusses safety and quality assurance procedures in blood bank laboratory.

PHOP 255
**Water Purification and Treatment Systems in
Pharmaceutical & Chemical Processes**
Three Credits

The course covers the major aspects related to high purity water systems use in the chemical, and pharmaceutical industries. Emphasis will be in equipment set-up and maintenance, multimedia filtration, chlorination, softening, carbon adsorption, filtration, distillation, storage and distribution, steam in place.

Res

PHSC 101
Introduction to Physical Science I
Three Credits

This course will consist of 3 hours weekly and contains the study at elementary level of mechanical, thermal and sound phenomena and will serve as it bases for the interpretation of the surrounding world and its practical applications. The approach of the course is characterized essentially for being inductive-deductive. In the analysis of the physical phenomena the qualitative one must prevail sometimes and, when be prudent, the quantitative one. The professor will use diverse strategies in classes like conferences, group discussion of information presented/displayed by individual students and discussions. It would be possible to be brought subjects that are not in the course and each student will discuss thorough this subject. When showing the concepts must lean in experimental demonstrations and the computerized technology must be used. The use of the computers in the classroom will allow: accomplishment of experiments with mathematical models; automatization of physical experiments. Problems would be solved using systems of equations no more than two equations, referred to the fundamental physical laws and some elements of trigonometry.

PHSC 102
Introduction to Physical Science II
Three Credits

This course will consist of 3 hours weekly and contains the study at elementary level of electrical, magnetic and luminous phenomena and will serve as it bases for the interpretation of the surrounding world and its practical applications. The approach of the course is characterized essentially for being inductive-deductive. In the analysis of the physical phenomena the qualitative one must prevail sometimes and, when be prudent, the quantitative one. The professor will use diverse strategies in classes like conferences, group discussion of information presented/displayed by individual students and discussions. It would be possible to be brought subjects that are not in the course and each student will discuss thorough this subject. When showing the concepts must lean in experimental demonstrations and the computerized technology must be used. The use of the computers in the classroom will allow: accomplishment of experiments with mathematical models; automatization of physical experiments. Problems would be solved using systems of equations no more than two equations, referred to the fundamental physical laws and some elements of trigonometry.

PHSC 120
Technical Science
Three Credits

The course provides students with an introduction to the basic principle and applications of mechanics, electricity and magnetism in matter.

PHSC 203
General Physics I
Three Credits

The course contains concepts, physical amounts and laws to interpret and to describe the mechanical movement of the bodies (including Oscillations) from the analysis of its interactions, as well as their thermal interchanges, everything presented with a mathematical level of depth of differentials variations: derived and integral. Algebra and trigonometry will be used with amplitude, as well as the work with vectorial amounts. Integration and derivation from potential, exponential, sine and cosine functions will used so much in the theoretical analysis in classes, like in problems that should be solve by the students. At the beginning of the semester, in the kinematics chapters, will become more emphasis in the derivation that in integration, because the student is beginning to study Calculus I; but already in the middle of the semester (in the subjects of work, potential energy, center of mass, moment of inertia, simple harmonic motion, work in thermodynamic processes) integrations in the evaluations will be able to be included. Strategies or

forms of education of the course will be: conferences, practices of laboratory and discussion of problems in groups.

PHSC 203L

General Physics I with Calculus Laboratory One Credit

The knowledge of this course contribute to that the student interprets and verifies the main definitions, laws and theories of the mechanics and thermodynamics and in its practical application. It dominates to the main experimental techniques and the work with the measuring instruments and develops experimental skills that allow him to acquire new knowledge.

PHSC 204

General Physics II Three Credits

The course contains concepts, physical amounts and laws to interpret and to describe to the electromagnetic processes in the nature and the technique, as well as the fundamental characteristics of the waves (mechanical and luminous), presenting with a mathematical level of depth of differentials variations: derive and integration. Algebra and trigonometry will be used with amplitude, as well as the calculations with vectorial amounts. The differential calculus will be used with potential, sine, cosine and exponential functions. The laws of electromagnetism will appear in their integral form, but the situations to solve will be with fields of high symmetry (variant of the cases seen in classes). Strategies or forms of lessons of the course will be: conferences, practices of laboratories and discussion of problems in group.

PHSC 204L

General Physics II with Calculus Laboratory One Credit

The knowledge of this course contribute to that the student interprets and verifies the main definitions, laws and theories of the electricity and magnetism and in its practical application. It dominates to the main experimental techniques and the work with the measuring instruments and develops experimental skills that allow him to acquire new knowledge.

PHSC 205

General Physics I with Calculus Four Credits

The course contains concepts, physical amounts and laws to interpret and to describe the mechanical movement of the bodies (Oscillations including) from the analysis of its interactions, as well as their thermal interchanges, presented everything with a mathematical level of depth of differentials variations: derived and integral. Algebra and trigonometry will be used with amplitude, as well as the work with vectorial amounts. The integral derived ones and from potential, exponential, sine and cosine functions will be used

so much in the theoretical analysis in classes, like problems that should be solve by students. In the kinematics chapters, at the beginning of the semester, will become more emphasis in the derivation that in integration, because the student is beginning to study Calculus II; but already in the middle of the semester (in the subjects of work, potential energy, center of mass, moment of inertia, simple harmonic motion, work in thermodynamic processes) integrations in the evaluations will be able to be included.

PHSC 205L

Laboratory of General Physics I with Calculus One Credit

The knowledge of this course contribute to that the student interprets and verifies the main definitions, laws and theories of the mechanics and thermodynamics and in its practical application. It dominates to the main experimental techniques and the work with the measuring instruments and develops experimental skills that allow him to acquire new knowledge.

PHSC 206

General Physics II with Calculus Four Credits

The course contains concepts, physical amounts and laws to interpret and to describe to the electromagnetic processes in the nature and the technique, as well as the fundamental characteristics of the waves (mechanical and luminous), presenting with a mathematical level of depth of differentials variations: derived and integral. Algebra and trigonometry will be used with amplitude, as well as the vectorial amounts calculations. The differential calculus will be used with potential, sine, cosine and exponential functions. The laws of electromagnetism will appear in their integral form, but the situations to solve will be with fields of high symmetry (variant of the cases seen in classes).

PHSC 206L

Laboratory of General Physics II with Calculus One Credit

The knowledge of this course contribute to that the student interprets and verifies the main definitions, laws and theories of the electricity and magnetism and in its practical application. It dominates to the main experimental techniques and the work with the measuring instruments and develops experimental skills that allow him to acquire new knowledge.

PHSC 355**Practical Internship in Physics I****Three Credits**

The course is a practical internship in another university institution, private industry, or government agency. A minimum of sixty (60) hours is required.

PHSC 356**Practical Internship in Physics II****Three Credits**

The course is a practical internship in another university institution, private industry, or government agency. A minimum of sixty (60) hours is required.

PHSC 359**Modern Physics****Three Credits**

Governing Principles of the theory of Relativity, Blackbody Radiation, Photoelectric Effect, and Compton Effect. The Atom, Bohr Atom, De Broglie Postulates, Particle Diffraction, Heisenberg Principle, Atomic Physics, Quantum Mechanics, Statistical Physics, Ionic, Covalent and Metallic Bonding. Vander Waals interactions. Molecules, Crystals, Metallic, Ionic Covalent, Molecular Crystals, Mechanism of Conduction in Metals, Nuclear Physics, Fundamental Particles and Interactions of Nature, Nuclear Energy.

PHSC 359L**Modern Physics Laboratory****One Credit**

The knowledge of this course contribute to the student interprets and verifies the most transcendental experiments in physics in the 20th century and their contributions to every branch of physics. Besides dominating the main experimental techniques and work with measuring instruments and develop experimental skills that enable them to acquire new knowledge.

PHSC 365**Undergraduate Research in Physics I****Three Credits**

The course is a scientific laboratory and/or field research. The weekly schedule will be agreed upon by the student and the professor chosen to supervise research. The work schedule should not exceed nine (9) hours per week and should last one semester.

PHSC 366**Undergraduate Research in Physics II****Three Credits**

The course is a scientific laboratory and/or field research. The weekly schedule will be agreed upon by the student and the professor chosen to supervise research. The work

schedule should not exceed nine (9) hour per week and should last one semester.

PHOP 255**Water Purification Treatment****Three Credits**

The course covers the major aspects related to high purity water systems use in the chemical, and pharmaceutical industries. Emphasis will be in equipment set-up and maintenance, multimedia filtration, chlorination, softening, carbon adsorption, filtration, distillation, storage and distribution, steam in place.

PTTE 200**Internship in Technology****Three Credits**

This course extends classroom activities to a supervised, on-the-job learning experience directly connected to the student's educational or occupational goal. The student will be under the direct supervision of a college faculty member as well as industrial personnel. Participants must attend orientation and seminar activities to familiarize themselves with internship program requirements and workplace habits. In addition, they must comply with pre-internship consultation with the faculty supervisor and complete 10 hours per week of training for a period of 9 weeks during the semester or summer. The student will receive written evaluations from the industrial and faculty supervisors. This course will be taken by the end of the student's second year of studies.

SCIE 250**Communication and Teams in the workplace****Three Credits**

This course will provide the student with the basic skills necessary to work as a member of a team in business or organizational environments.

SCHOOL OF SOCIAL SCIENCES AND COMMUNICATIONS

The School of Social Sciences and Communications at Universidad Ana G. Méndez-Recinto de Gurabo offers degree programs which enable students to compete optimally in the workplace. At the undergraduate level, the School offers a bachelor's degrees with majors in criminology, psychology, social work, public administration, general social sciences, and communications. The School emphasizes the study of human nature, culture, ideas, institutions, human relations, communications, social change and human beings' relation with the environment.

VISION

To develop productive and effective members of the global community with a professional, social, ethical and humanistic foundation.

MISSION

The school provides high quality academic programs at both the undergraduate and graduate level in the social sciences and communications. The School undertakes this in a setting where excellence in teaching and learning are encouraged in the classroom, in practical internships, in the use of technology, in research, in communication media and in community projects. The basic goal is to provide our graduates not only competency in their chosen field, but also the diversity of experience needed to understand and appreciate the relationship between social sciences, communication and other disciplines.

The general objectives in all School curricula and programs are to:

1. Maintain academic excellence through study, teaching and social research.
2. Promote the knowledge and preservation of Puerto Rican and universal cultural values.
3. Develop the understanding that collaboration is necessary to achieve the sharing of ideas within disciplines, institutions, communities and nations.
4. Develop the capacity to analyze problems and seek solutions.
5. Promote understanding of the human condition, helping students to view the world with compassion and promoting responsible and ethical behavior.
6. Provide the student with interdisciplinary knowledge that makes it possible to understand modern society and its primary social problems.
7. Help the student to obtain a scientific and philosophic education, analytical and observant of human and organizational behavior.
8. Foster critical analysis and research of the economic, social and political situation in Puerto Rico today, and

encourage interest in searching for alternative models and solutions.

9. Prepare the student to pursue graduate studies in the social sciences and communication fields.

SPECIALIZED ACCREDITATIONS

ACCREDITED BY THE
COUNCIL ON SOCIAL WORK EDUCATION

The bachelor's degree in Arts in Social Work is accredited by the Council on Social Work Education (CSWE) since 2012.

Accredited by the
American Psychological Association

The Doctoral Program in Counseling Psychology is accredited by the American Psychological Association (APA) since September 27, 2016.

Accrediting Council on Education
in Journalism and Mass Communications

The bachelor's degree in Communications and Film Production, Video and Multimedia are accredited by the Accrediting Council on Education in Journalism and Mass Communications (ACEJMC) since 2018.

AREA OF SOCIAL SCIENCES

The Area of Social Sciences studies human nature, culture, ideas, institutions, human relations, social change and human beings' relation with the environment.

The School offers Bachelor of Arts degrees with majors in psychology, criminology, public administration, social work, general social sciences and communication.

Objectives:

1. Provide the student with interdisciplinary knowledge that makes it possible to understand modern society and its primary social problems.
2. Help the student to obtain a scientific and philosophic education, analytical and observant of human and organizational behavior.
3. Foster critical analysis and research of the economic, social and political situation in Puerto Rico today, and encourage interest in searching for alternative models and solutions.
4. Prepare the student to pursue graduate studies in the social sciences and related fields.

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN CINEMATOGRAPHY AND PHOTOGRAPHIC DIRECTION

This major prepares the student with basic knowledge of photography cinematography techniques, as well as the concepts of audiovisual communication and aesthetics. Alumni will be able to conceptualize and shape audiovisual products for traditional media and electronic media.

BACHELOR'S DEGREE IN ARTS WITH CONCENTRATION IN SOCIAL WORK

This program provides a knowledge base on the relationship and influence of biopsychosocial and spiritual factors in social systems and social policies that frame professional practice. It allows the critical analysis of the structural and functional aspects of the systems and the manifestations of oppression and human diversity in these scenarios. It facilitates the identification and application of the phases of the aid process from a generalist perspective, as well as the identification of the ethical principles guiding social research and the possible dilemmas that may arise.

AREA OF COMMUNICATIONS

Mission

News, information, and ideas are vital to democratic society and to the civic and economic well being of Puerto Rico. The Department of Communication seeks to prepare students with the knowledge, skills and integrity to contribute to the communication needs and wants of the communities they serve. The Department seeks particularly to represent in the industry and profession the experience, perspectives and aspirations of graduates from lower income groups in Puerto Rico, many of whom are first-generation college students.

Vision

The Department of Communications of the Universidad Ana G. Méndez-Recinto de Gurabo will be an accredited and leading institution in Puerto Rico and Latin America, composed of a community of ethical, creative, diverse and innovative faculty and students.

Values and Professional Competences

1. Understand and apply the principles and laws of freedom of speech and press.
2. Demonstrate an understanding of the history and role of professionals and institutions in shaping communications.
3. Demonstrate an understanding of gender, race, ethnicity, sexual orientation.
4. Demonstrate an understanding of the diversity of peoples and cultures and of the significance and impact of mass communications in a global society.
5. Demonstrate an understanding of professional ethical principles and work ethically in pursuit of truth, accuracy, fairness and diversity.
6. Understand concepts and apply theories in the use and presentation of images and information.
7. Think critically, creatively and independently.
8. Conduct research and evaluate information by methods appropriate to the communications professions in which they work .
9. Write correctly and clearly in forms and styles appropriate for the communications professions, audiences and purposes they serve.
10. Critically evaluate their own work and that of others for accuracy and fairness, clarity, appropriate style and grammatical correctness.
11. Apply basic numerical and statistical concepts.
12. Apply tools and technologies appropriate for the communications professions in which they work, and to understand the digital world.

BACHELOR'S DEGREE IN ARTS WITH CONCENTRATION IN COMMUNICATIONS

This program prepares to work in the media: radio, television, newspapers, internet, etc. You can be a professional of: journalism (print, radio, television, digital), public relations or advertising, professions of high creativity.

COURSE DESCRIPTIONS

(Courses marked with @ could be offered in both modalities, traditional or on-line.)

ANTH 205 General Anthropology Three Credits

The course is a general introduction to the biological and cultural evolution of the human species. Topics covered include principles, theories, process; methods and techniques used by the anthropologist in order to explain changes, as well as stability, adaptation and extinction of the human species.

COMM 205 @ Social Communication Theories Three Credits

The course covers diverse theoretical concepts and their relationship with the social impact of the media. Emphasis is placed on understanding the mechanisms and procedures used to manipulate information.

COMM 210 Communication: Legal and Ethical Aspects Three Credits

The course will analyze the legislation and regulations related to the media and their ethical and professional responsibilities.

COMM 211 Communication Ethics Three Credits

The course deals with ethical and sociological principles in mass communications. Emphasis is placed on basic problems inherent in freedom of expression and freedom of the press, and provides the student with the necessary conceptual tools to understand them. Primary sources of information will be studied, among others, the Bill of Rights of the Constitution of Puerto Rico, the First Amendment to the Constitution of the United States, and current codes of ethics.

COMM 212 Development and management of media enterprises Three Credits

This course provides students basic skills in the development and management of a company in the field of communications. Historical and theoretical aspects are studied, and the development of strategies for the audiovisual industries

COMM 230 @
Fundamental Principles for the Journalist
Three Credits

The aim of this course is to develop in the students' knowledge and skills necessary in the preparation of written documents relevant to all areas of mass media communications. The first part of the course is fundamentally about writing principles. Through workshops and seminars, the second part provides students ample opportunities to put into practice all concepts learned.

COMM 250
Digital Journalism
Three Credits

In this course students will develop their skills and knowledge on how to write correctly and journalistically for the digital media. The first part of the course teaching conceived changes that digital advances have resulted in journalism. The second part foresees an ample exercise of writing for digital media, which intends to take the lessons learned from the elaboration, discussion and analysis of journalism texts produced by students and the press, and put them into practice.

COMM 305
Writing Style in Journalism
Three Credits

The course offers the student the basic techniques of simple news editing. It also defines the concept of news, its value and importance.

COMM 307
Writing for the Media
Three Credits

The course centers on a theoretical and practical view of the principles of scriptwriting. Television, radio and movies are included.

COMM 310
**Communication Technology: Cultural, Educational,
and Economic Impact**
Three Credits

The course deals with communication technology and its impact on today's world: the media for the message. Topics include the digital telephone, television, computers, and the impact of current developments in the field of communication.

COMM 311
Photojournalism
Three Credits

This course will enable students to obtain real experience in the field of photojournalism. Students will examine technological changes relating to photography and the impact these changes have had on mass media. In-class discussion combined with practical experiences will enable

students to learn about photographic theories and photojournalism techniques such as: shutter speed, image composition, among others. At the end of the course, students will prepare a portfolio containing different journalistic images, in addition to a field experience covering hard and soft news.

COMM 320
Introduction to Public Relations
Three Credits

The course deals with basic elements of public relations theory and practice. It includes analyses of the different definitions proposed by the experts and the function of public relations in the free world.

COMM 325
Introduction to Advertising
Three Credits

The course centers on the study of advertising as a social function. It includes analysis and selection of the advertising method and its creative aspect.

COMM 330
Design and Publishing of Electronic Pages
Three Credits

In this course students will develop their skills and knowledge appropriate to design and publish web pages. The first part of the course teaching of the nature of the cyber network and its interaction with the world of communications, especially the journalism. The second part foresees an ample exercise of design and publishing web pages on the internet, and the discussion and analysis of the publications made by students and digital media.

COMM 350
Advertising Methods
Three Credits

The course deals with the phases involved in the creation and presentation of the advertising campaign. It emphasizes the study of its objectives, plans and strategies.

COMM 360
Advanced Public Relations
Three Credits

The course includes research methods, conceptualization of the public relations program, and the specializations of the profession in accordance with the types of public.

COMM 380**Broadcasting Principles****Three Credits**

The course deals with radio broadcasting as a means of social communication. Topics include its social and historical context and theoretical and practical applications.

COMM 385**Broadcasting Production and Direction****Three Credits**

The course is a workshop in audio equipment. It includes recording and mixing, and the elaboration of the script for newscasts and educational programs.

COMM 390**Strategic Media Planning****Three Credits**

Theoretical and methodological foundations of strategic media planning in advertising are studied as well as the market and its components. Students will elaborate, with the guidance of the professor, a strategic media plan for advertising presenting at least one of the methodologies used for design, implementation and evaluation.

COMM 400**Principles of Television****Three Credits**

The course deals with fundamentals concepts of television; both theoretical and practical aspects will be considered. Emphasis is placed on the history, social impact, and application of TV production.

COMM 410**Television Production****Three Credits**

The course covers practical techniques for television production. It includes equipment, direction, and coordination with the technical staff.

COMM 420**Writing for Public Relations****Three Credits**

The course studies the definition and structure of the most used texts in the field of public relations, including press releases, blogs, speeches, social networking, press kits and handbook for crisis management. The basic techniques for writing and editing are also addressed.

COMM 430**Journalism Workshop****Three Credits**

The course is an advanced journalism workshop. It includes news publication, diagramming, editing of headlines, and the printing process of a real publication.

COMM 435**Crisis Communication in Public Relations****Three Credits**

Study of fundamental theories of crisis communication as well as the essential elements and the relationship between organizational crisis and media and leadership in crisis management. They will also study historically relevant cases, the communication management of organizational crisis and crisis management of these different types of responses. A plan of prevention and crisis communication in organizations is developed.

COMM 440**Public Relations Campaigns****Three Credits**

Analysis of cases of Public Relations in organizations. Diagnosis of Public Relations in organizations, and using this as a basis, students will undertake the design, implementation and evaluation of PR campaigns, with the advice of the professor.

COMM 455**Advertising Campaigns****Three Credits**

Analysis of cases of Advertising in organizations. Diagnosis of Advertising in organizations, and using this as a basis, students will undertake the design, implementation and evaluation of advertising campaigns, with the advice of the Professor.

COMM 450**Supervised Practicum in Communication****Three Credits**

The course is a work experience in an area of communication, in collaboration with other professionals in the media.

COMU 201**Audiovisual Communications Media I****Three Credits**

Introductory course and discussion of the nature of contemporary audiovisual media and the diverse ways of seeing which are fundamental in the differences between communication and signification. Study and analysis of the filmic text, semiotics and aesthetics in modern, mass and postmodern societies. Study of the relation between ways of seeing, style and ethics.

COMU 203**Audiovisual Communications Media I****Three Credits**

Introductory course and discussion of the nature of contemporary audiovisual media and the diverse ways of seeing which are fundamental in the differences between communication and signification. Study and analysis of the filmic text, semiotics and aesthetics in modern, mass and

postmodernist societies. Study of the relation between ways of seeing, style and ethics.

COMU 303
Image Manipulation I
Three Credits

Introduction of the concepts of the virtual and multimedia to understand and implement the computer manipulated reality which is usual in video, film and contemporary multimedia. Presents the animation of texts, photographs and figure by way of keyframes, plug-ins, pre-sets and programing. Discusses and applies the skills to use FINAL CUT 7 and AFTER EFFECTS to implement the concepts of the virtual and multimedia.

COMU 308
Writing and Style for Audiovisual Communications
Three Credits

Teaching of writing and style of audiovisual communications scripts as mechanisms in the creation of audiovisual executions for film, video and multimedia. Studies the practice and mechanism of storyboarding, and, on the other, the mechanism and practice of audiovisual scripts. Presents the writing formats which are used in musical videos, short films and films as they express themselves as storyboards and audiovisual scripts. Presents the photographic, editing, filmic planes and narrative devices which are used in storyboards and scripts in the audiovisual industries. STORYBOARD QUICK and FINAL DRAFT are the relevant softwares of the course.

COMU 313
Introduction to the Digital Camera
Three Credits

Introduces the practice and theory of digital photography with the still and moving image photography. The concepts of composition, illumination, depth of field and perspective are studied and applied to still and the moving image photography. Instructs on the ethics, creativity and the social nature of the photographer and the cinematographer. Study of the concept of "plane" as it is used in the thinking of the still and the moving image in film, video and multimedia.

COMU 315
Lighting for Audiovisual Media
Three Credits

Study of lighting techniques and the instruments used for implementing them in film making. Study of colorization for film, video and multimedia in relation to the idea of communication and to its technical aspects. Study of COLORS by Apple for the colorization and correction of the moving image.

COMU 333
Editing Process
Three Credits

Presents the theory of the moving image editing process through the concepts of montage, lineal editing, flash black and the different kinds of cuts, transitions, plug-ins and sequences which are traditional in cinema, video production and multimedia. Discusses and applies the skills for the use of FINAL CUT 7 of the APPLE platform to implement the concepts of the editing process for cinema, video and multimedia.

COMU 403
Audiovisual Communications Media II
Three Credits

Study of style as a cultural problem and its relation to audiovisual communications. Study of the forms of stilization of the digital image through the means of the computer and by way of COLOR from the APPLE platform and COMBUSTION of the SGI platform. Study of the theory of color and the texture of the digital image. Presentation of the possibilities of style as a cultural problem as far as it is finally a technical problem. Introductions of the basics of editing and those of the writing for film, video and multimedia as they are related to the cultural problem of style in film, video and multimedia.

CRIM 205
Introduction to Criminology
Three Credits

The course presents an outline of the field, its development, present trends, and specializations. Topics include criminology as an empirical science, crime, the delinquent, and the victim, as well as investigation and criminal statistics.

CRIM 300
Criminal Law
Three Credits

The course deals with general principles of the Criminal Code. Topics include types of crimes, penalties, and security measures, as well as comparative study of cases to analyze the elements of a crime.

CRIM 305
Criminal Justice System in Puerto Rico
Three Credits

The course is an overview of the criminal justice system in Puerto Rico. Topics include a comparative approach to the legal framework, the system's structures, functions, procedures, relationships to other institutions and its role in democracy.

CRIM 320**Criminal Investigation Techniques****Three Credits**

The course centers on scientific methods of investigation within a legal framework. Case studies are thoroughly analyzed. Observation techniques and evaluation of relevant information will be discussed. Modern methods of locating, obtaining and interpreting information will be presented.

CRIM 325**Juvenile Delinquency in Puerto Rico****Three Credits**

The course centers on the definition of the problems of juvenile delinquency in Puerto Rico. Topics include social, cultural, psychological and legal aspects; causes and prevention; prosecution and treatment of the juvenile delinquent.

CRIM 327**Correctional Programs: Administration Principles****Three Credits**

The course deals with the principles of the correctional system in Puerto Rico: philosophy, legal framework and regulations. Topics include structures, functions and procedures in the administration of penal institutions, the parole program, the adult probation system, the classification program, the diagnosis and treatment of inmates. The area of custody programs and treatment of minors is also discussed.

CRIM 330**Administration and Organization Policy****Three Credits**

The course centers on the study of principles of organization and administration of the police force in Puerto Rico. Emphasis is placed on organizational theory, administrative procedures, administration and supervision programs.

CRIM 400**Criminal Procedures****Three Credits**

The course is an introduction to the understanding and application of criminal procedures and case law, the beginning of judicial action and its development by stages. Emphasis is placed on the rights of the accused.

CRIM 415**Evidence****Three Credits**

The course deals with rules of evidence and their application in criminal cases. Topics include techniques for the presentation of evidence, preparation of cases, and court testimony.

CRIM 420**Seminar: Case Study in Police Administration****Three Credits**

The course covers legal and institutional approaches to administrative case through case studies. Topics include procedures and adjudication.

CRIM 425 - 426**Criminalistic I and II****Six Credits**

The course deals with methods, techniques, and procedures used in gathering, securing and analyzing evidence in criminal cases. Identification and subsequent presentation in court will be discussed.

CRIM 430**Correctional System of Puerto Rico****Three Credits**

The course consists of the presentation and discussion of current conditions in the Puerto Rican correctional system. It includes legal, organizational and operational aspects.

CRIM 435**Case Preparation and Testimony****Three Credits**

The course deals with the development of skills needed for preparing reports and for procedural handling of evidence. Presentation of evidence and testimony is emphasized.

CRIM 440**Seminar: Prevention, Prosecution and Treatment****Three Credits**

The course centers on the discussion of fundamental problems in the prevention of crime, prosecution, custody and treatment of the offender. Topics include legal, social, cultural, physical, human and economic resources, as well as participation and commitment of the community.

CRIM 450**Legal Medicine****Three Credits**

The course deals with the legal aspects of medicine. Medical and legal cases will be discussed, including cases of malpractice. Emphasis is placed on case discussion, laboratory practice, techniques and theories related to legal medicine.

CRIM 465**Seminar: Civil Rights of the Accused****Three Credits**

The course is an analytical interpretation of Section II, Article 2 of the Commonwealth Constitution, which establishes the rights of the accused in criminal proceedings.

CRIM 475**Practicum****Three Credits**

The course is an integration of theory and experience through observation in a judicial or correctional institution.

ECON 121-122**Economic Principles and Problems I and II****Six Credits**

The course deals with economic theories and practice. Topics include value and price, exchange, distribution, production, employment, national income, international commerce, public expenses, economic cycles, social welfare and influence of government on the economy.

ECON 123**Economics Principles and Problems (Compendium)****Three Credits**

The course covers economic theories, value and price, distribution, protection and the role of government in the economy.

ECON 207**New World Order Economy****Three Credits**

The course includes a diagnostic view of contemporary economic phases and their social, environmental and political effects. It also includes discussion of fundamental economic perspectives for future societies.

ECON 351**History of Economic Thought****Three Credits**

The course centers on theoretical analysis through works of leading economists.

ECON 253**Economy Development of Puerto Rico****Three Credits**

The course covers characteristics and trends of the Puerto Rican economy. It includes an analysis of the local economic structure and its relationship to international economics.

ECON 363**Economics Trends in Latin America****Three Credits**

The course centers on political and institutional forces and problems that affect the development of Latin American countries.

ECON 373**Economic Development of the United States****Three Credits**

The course covers trends and development of the economy of the United States. National and international growth will be emphasized.

ECON 385**Development and Underdevelopment****Three Credits**

The course deals with problems, characteristics and policies of the underdeveloped countries. Theories of economic growth and their application in Puerto Rico are emphasized.

ECON 400**Microeconomic Theory****Three Credits**

The course deals with determining national income and employment, price and growth rate level in the economic system. Topics include spending and saving, private investment, prosperity and depression, money, and implications of national income public policy.

ECON 420**International Economics****Three Credits**

The course deals with international trade, including problems and policies, balance of payments, debts, international monetary problems, and international financial organizations.

GEOG 201**Physical Geography****Three Credits**

The course deals with principles of geography and their application to the environment, climate, soil, vegetation and natural resources.

GEOG 202**Human Geography****Three Credits**

The course is an introduction to human and cultural geography. Topics include variation of human traits, diversity of economic systems, and population changes.

GEOG 205 @**Global Communities and Resources:****A Critical View****Three Credits**

The course is an introduction to human problems in the contemporary world. Physical geography and different theories related to this phenomenon are considered. Implications of problems related to the economical and political development of Puerto Rican society will also be discussed.

GEOG 207
Historical Geography
Three Credits

The course deals with the relationship between historical events and their geographic setting.

GEOG 225
Geography of Puerto Rico
Three Credits

The course centers on physical, biotic, and human aspects of Puerto Rico, its regions and its environment.

GEOG 263
Central, South America and the Caribbean
Geography
Three Credits

The course deals with geographical regions, natural resources, government, climate, vegetation, soil, population, economic structure, and infrastructure, as well as their relationship to other regions of the world.

GEOG 273
North American Geography
Three Credits

The course centers on the United States and Canada. Topics include physical characteristics, economic resources, climate, culture, and economic development.

GRAD 201
Graphic Communication Media
Three Credits

The course deals with foundations and concepts of the graphic communications. Students study the different graphic communications media such as digital video for multimedia works, graphic design, typography, effective print communication, design and composition of pages, illustrations, as well as the foundations of design. Students stay current and study aspects and new developments in the publishing industry. Topics include technological development and how to stay in contact with traditional operations, in view of emerging demands in methods and design creations, management, programming and distribution.

GRAD 205
Introduction to the Computer in Graphic Arts
Three Credits

This course introduces the components (hardware and software) of computer systems (IBM compatible and Macintosh). It also develops basic command of the keyboard. In addition, students acquire problem-solving techniques and learn how to be productive when using information systems.

GRAD 207
Graphic Design
Three Credits

The course covers theory, analysis, and practice in the development of design. Students will develop the skills needed for the preparation of thumbnails and rough layouts. Each type of layout and its function in the creative process is analyzed. The course includes computerized layout design, using PageMaker, Freehand, and Basic Photoshop.

GRAD 300
Typography and Design
Three Credits

The course centers on theory, analysis, and practice in the use of various forms of typography. Rules of typographic composition are analyzed and applied to both manual and computerized graphic design. Basic Photoshop and Illustrator programs are used.

GRAD 305
Image Preparation
Three Credits

The course deals with basic principles of copy preparation based on knowledge acquired in Graphic Arts (AGRA 3022). Emphasis is placed on the study, analysis, and application of methods and elements for developing final copies for reproduction purposes. Basic Photoshop, Freehand and PageMaker programs are used.

GRAD 306
Introduction to Digital Image
Three Credits

The course is an introduction to the theory and practice of digital photography focusing on visual communications media, using digital and conventional cameras along with the Photoshop program for editing images. Students will acquire a reasonable command of the process of digital image creation, which will allow them to produce works in the print media, the arts and advertising.

GRAD 320
Digital Photography
Three Credits

This is an introductory course in the use and handling of digital cameras to take fixed or moving pictures. The computer is used with Adobe Photoshop, which is the primary program to edit photo images and webpage design. Students will use the digital camera to take pictures and the computer to correct color, contrast, image manipulation and size determination. They will have considerable practice in the use of filters, image formats, and applications. In addition, they will use printers to print halftones, duotones, positives, transparencies, and color images.

GRAD 330
Printing Processes
Three Credits

This is an introductory course in the principal printing processes in graphic arts. Among the main processes that will be studied are: letterpress, gravure, lithography, flexography, and screen printing. Similarities and differences among different printing processes in the publication industry will be established. In addition, orientation is given to the study and analysis in the selection of the appropriate process to apply in a given situation, considering the number of impressions, colors, cost, finishing operations, inks, and other materials.

GRAD 400
Introduction to Image Animation
Three Credits

The course deals with foundations of planning and creation of interactive animation which involves tridimensional scenes and objects. Students will use the computer for the manipulation of objects and tridimensional animation. Basic problems of animation in three dimensions (3D) will be studied. These will include key framing, parenting, visual texture, focus clarity and the movement of the camera. Students will also be trained to plan their projects ahead of time and create storyboards so they can communicate with their clients and direct the production of image animations.

GRAD 450
Supervised Practice in Graphic Design
Three Credits

This course of supervised practice will enable the students to relate to a real work experience in the field of graphic design. The students will have the opportunity to apply all of their creative potential, knowledge, skills, abilities and experience acquired throughout their academic preparation. They will work directly with professionals in six areas: Advertising agencies, graphic design studios, printing shops, newspapers, publishers (books and magazines), and companies with print shops. They will have the opportunity to practice computerized graphic design, digital photography, management and animation of digital images, webpage design, and other tasks related to design.

HUMA 115-116
Introduction to Western Civilization I and II
Six Credits

The course is an introduction to Greek and Roman culture. Topics include drama, literature, art and philosophy, as well as the history of Christianity, medieval culture, feudalism, guilds, scholasticism, Romanesque, and gothic-style literature.

POSC 201 - 202
Introduction to Political Science I and II
Three Credits

The course deals with the history of political thought. Topics include the formation of the modern state, contemporary political ideology, theory of political institutions, international relations and the means created in the modern state for the participation of citizens.

POSC 203
Principles of Political Science (Compendium)
Three Credits

The course centers on the analysis of the modern state, its structure and citizen participation. Political decision-making in contemporary societies will be discussed.

POSC 253
Political System of Puerto Rico
Three Credits

The course deals with political institutions in Puerto Rico from 1870 to the present. Legal and political evolution from the "Carta Autonómica" to the legislation establishing the elected governorship and the Commonwealth will be discussed.

POSC 355
Legislative Process
Three Credits

The course covers the functions and organization of the legislative branch, its relationship to other branches; its powers and limitations, as well as legislative procedures, investigations, reports and case law applicable to the legislative process.

POSC 358
Administrative Law
Three Credits

The course traces the development of administrative law, as well as administrative action, procedures and agencies, court reviews, interpretation of legislation, regulations and retroactivity. Areas discussed include administrative discretion in policy-making, jurisdiction and investigative powers, as well as notification and hearings, the decision-making process and other related topics.

POSC 373
Political System of the United States
Three Credits

The course covers the evolution of the federal government, its structure, procedures and functions. Emphasis will be placed on organization, as well as on separation of powers in the legislative, executive and judicial branches.

POSC 380**Constitutional Law****Three Credits**

The course is an introduction to the constitutional development of Puerto Rico, with emphasis on civil rights provisions in the Constitution.

POSC 385**Civil Rights of Puerto Rico****Three Credits**

The course deals with statutory, constitutional and Supreme Court case law sources of civil rights guarantees in Puerto Rico. Emphasis is on case studies of contradictory government actions, including legislation limiting the rights.

POSC 387**Law and Society: A Contemporary Vision****Three Credits**

The course is a study of the relationship between law and society. Topics include a theoretical vision of the legal system in the substantive content of the influence of social factors in its development. The relationship between law and social change will be analyzed.

POSC 390**International Political Systems****Three Credits**

The course centers on study and discussion of the political systems from an international perspective, and contemporary political ideologies. Emphasis is placed on the study of political behavior, political participation, governance and international relations.

POSC 401 - 402**Comparative Government I and II****Six Credits**

The course is a comparative study of the political and constitutional development of the European nations, centering on their governments' political institutions, their role in international organizations, and international relations.

POSC 407**Political and Constitutional History of Puerto Rico****Three Credits**

The course deals with the political history of Puerto Rico under Spanish and American rule.

POSC 411 - 412**Political Theory I and II****Six Credits**

The course centers on the development of political theory. Topics include social and political reality in different areas and their contribution to the development of political thought. Political theories, beliefs and systems of different countries will be discussed.

PROD 205**Film Direction and Production I****Three Credits**

Theoretical and practical study of the creation of sound identities for cinema and multimedia. Discussion of the techniques for the use of pre-recorded sound, to record location sound for the cinema and to generate musical and sound effects in the studio. PRO TOOLS is central for the course, as are booms and on location recorders. Presentation of the basic concepts film writing as they are related to sound identities in film, video and multimedia. Presentation of the relation between sound identities and all the other aspects of a visual execution in film, video and multimedia. Realization of audiovisual works, (short films, commercials, documentaries or others).

PROD 300**Film Production and Direction II****Three Credits**

Instruction of the administrative and production aspects of film, video and multimedia such as: processes of budgeting, shooting and production schedules, funding, the mechanics of the production floor and sets. Study of the skills for the direction of actors, visualization and the film script. Study of the mechanisms which ease the relation of the director and actors and allow the creation of visual and actorial identities by way of gestures, internal, cultural and historic resources of the actor. Study the direction of creative teams and the creation of filmic sets as they are related to the actor function and her characters. Realization of audiovisual works, (short films, commercials, documentaries or others).

PROD 303**Production and Advanced Management for Media Communication III****Three Credits**

Advanced and practical study of the administrative and production aspects of audiovisual media communications. Advanced elaboration of the responsibilities and tasks of a film producer from the conception of a production design up to the final projection and distribution of an audiovisual object. Study of the concept, idea and production designs related to independent and low budget film production.

PROD 350**Sound Production for Audiovisual Media****Three Credits**

Study of audiovisual media communication sound design, editing and production. Practice of the use of sound technologies as the different booms, microphones and set or studio recorders. Study of the techniques of sound editing.

PSYC 121-122
Psychology I and II
Six Credits

The course is an introduction to basic theories of human behavior and their relation to social progress and individual growth.

PSYC 123 @
Survey Course in Psychology
Three Credits

This course is a condensed version of PSYC 121-122.

PSYC 205
Personal Growth and Development
Three Credits

The course emphasizes the dynamics of human behavior, and techniques for effective interpersonal relations. Human activity and mechanisms for personal and social adjustment are analyzed in order to achieve understanding of oneself and others.

PSYC 207
Ethnopsychology and Human Environment
Three Credits

The course uses an interdisciplinary approach for studying *lumpen* behavior and the role of the human mind and human values in contemporary Puerto Rican society. Emphasis is placed on critical thinking as a means of examining this phenomenon.

PSYC 221
Child Psychology
Three Credits

Main theories of child development, emphasizing cognition, learning, personality and behavior. Recommended for elementary education students.

PSYC 222
Adolescent Psychology
Three Credits

The course deals with adolescent development and behavior, including personality, learning, vocational selection, moral development and social adjustment in Puerto Rican society. Alienation and social commitment will also be discussed.

PSYC 225
Social Psychology
Three Credits

The course centers on the relationship between the individual and society. Attitudes, perception of group behavior, prejudices, and conformity will be discussed.

PSYC 281-282
Development of the Personality I and II
Six Credits

This is an advanced course on the development of personality. It includes discussion of theories and research on human development from conception through death. The biological, social, psychological and circumstantial forces that shape the individual will be covered. Focus is on early adulthood, maturity and old age.

PSYC 305
Human Relations and Public Service
Three Credits

The course deals with the complexity and the dynamics of human relationships. The variables that influence individual behavior in group situations will be studied. Topics include motivation, leadership, communication, resistance to change, and the importance of good human relations in public service.

PSYC 307
Group Dynamics
Three Credits

The course covers group dynamics, cohesion, structure, emotional factors, leadership, and communication. The classroom situation is used as a laboratory for the concepts studied.

PSYC 321
Theories of Personality
Three Credits

The course deals with theories, problems and research regarding the role of motivational, perceptive, socio-economic, biological, genetic, somatic, and learning factors in the development of the personality.

PSYC 325
Introduction to Gerontology
Three Credits

The course deals with physiological and psychological aspects of aging. Resources for servicing the older citizen in Puerto Rico will be discussed.

PSYC 330
Measurement Techniques of Personality
Three Credits

The course centers on techniques for assessing psychological variables, including mental and motor ability, interests, attitudes, and goals. Statistical bases in the construction of scales and normalization of tests will be presented.

PSYC 343
Psychology of Learning
Three Credits

The course covers theories of learning as a determinant of behavior. Topics include variables in the learning process, experimentation and application to education. Clinical experience will be provided.

PSYC 350
Principles of Psychopathology
Three Credits

The course covers dynamics, diagnosis, and prediction of abnormal behavior. Neuroses, psychotic disorders and personality disturbances such as alcoholism, sexual deviation and others will be discussed. Psychotherapies used in the treatment of abnormal behavior will be analyzed.

PSYC 355
Industrial Psychology
Three Credits

The course deals with the application of psychological techniques to industry and business. Emphasis is on promotion and recruitment of personnel. Psychological factors that determine efficiency of industrial organizations will be discussed.

PSYC 360
Human Sexuality
Three Credits

This course addresses sexuality as an integral part of human functioning and relationships. Physiological, sociological and psychological aspects of sexual behavior will be covered, including the cultural factors in sexuality, ethical dimensions and sexually transmitted diseases, such as AIDS.

PSYC 400
Experimental Psychology
Four Credits

The course is an introduction to experimental methods from a methodological point of view. Topics emphasized include epistemological bases of sciences, ethical issues in conducting experimental research, APA Ethical Standards, scientific and non-scientific approaches to knowledge, and goals of scientific methods. Other topics discussed include independent and dependent age, external validity, experimental and statistical hypothesis, identification of statistically significant effects, elements of descriptive and inferential statistics, treatment effects, experimental treatment, control and experimental groups, and features of the experimental methods. Basic experimental designs discussed include completely randomized, within subject, and factorial designs. Emphasis will be placed on independent group designs, random groups, matched groups and others. Experimental thesis designs will be carefully discussed and applied.

PSYC 405
Physiological Psychology
Three Credits

The course covers physiology and human behavior, including the central nervous system, the autonomous nervous system, cortical processes, processes of emotion, motivation, and behavioral disorders with physical etiology. Relationship between learning and psychological processes will be discussed.

PSYC 415
Techniques and Counseling
Three Credits

The course centers on counseling techniques and skills. Emphasis is on the discovery and diagnosis of symptoms, therapy and patients' behavior.

PSYC 420
Counseling and Therapy
Three Credits

The course aims to prepare the student for giving short-term therapy, including crisis intervention, reality therapy, and other types of therapy for patients seeking prompt relief from their symptoms. Training will be through group dynamics. The student will be taught to distinguish between patients or clients who may benefit from this type of assistance, to make a psycho-diagnosis, and to develop an evaluation plan.

PSYC 450
Psychology Integration Seminar
Two Credits

The course centers on analyzing psychologists' work and functions in diverse service settings. It includes discussion of the psychologist's Code of Ethics and the most relevant laws involved in the rendering of psychological services. The design and implementation of a community service activity are also included.

PUAD 203
Public Personnel Administration
Three Credits

Study of the theoretical, legal and practical aspects of personnel administration. The Commonwealth Personnel Law and its regulations are studied to gauge their impact on Puerto Rico's public administration practices.

PUAD 231
Administration and Supervision for Safety and Security Officers
Three Credits

In this course students will learn the basic principles of management and supervision of staff in security area. Students will learn supervisory styles, different types of public and private agencies and their strategies. In addition, students will develop skills in planning and logistic, aimed at

managing security, surveillance, protection and services staff.

PUAD 310

Personnel Training

Three Credits

Provide the student with an understanding of the importance of training in a large organization and practical view into the management of the training function.

PUAD 358

Administrative Law

Three Credits

Study of the doctrines and principles of the administrative law in public administration. Discussion of the relationship between administrative law and the regulation of the executive branch in regard to the role of state. Discussion of the Law 170, Administrative Uniform Procedure Act, and the Law 12, Governmental Ethics Act. Discussion of applicable case law.

PUAD 400

Planning and Government

Three Credits

Analysis of the meaning, the nature, and the utility of planning and its methods. Examination of the tendencies for the understanding of social movements, governmental procedures and the new planning styles.

PUAD 405

Tax Policies and Government Budgeting

Three Credits

Study of the constitutional, legal and administrative nature of the public budget. Discussion of the budgetary cycle and the formulation, execution and control processes. At the end of the course, students will formulate a budgetary petition.

SOCI 201-202

Sociology Principles I and II

Six Credits

The course deals with the individual in the social environment, social organization, social change and control. Mental health, juvenile delinquency, crime, unemployment and racial conflict will be discussed. Topics include the influence of institutions, such as the family, the school, the church and the state.

SOCI 203

Sociology Principles (Compendium)

Three Credits

The course is a compendium of Soci 201-202 for criminology students. Topics include social organization, cultural phenomena, and socialization. Basic institutions, social deviation, stratification, social mobility, social and cultural change will also be discussed.

SOCI 216

Contemporary Social Problems

Three Credits

Critical review, theoretical and empirical sociological perspective (functionalism, conflict and interactionism) of contemporary social problems, their classification as phenomena or social construction of deviant behavior and the resulting formal and informal social control. Includes the influence of social media and structures in building social problems. Comparative analysis of local and global social problems, possible solutions through citizen action and governmental structures that generate public policy designed to take the same cases, statistical analysis, responsible use of technology and the study of public policy related to the topic will be strategies in the course.

SOCI 321

Sociology of Culture

Three Credits

The course deals with the relationship between society and culture. Concepts of cultural interaction within society will be discussed.

SOCI 325

Sociology of Deviance

Three Credits

Theories of social deviance. The role of social and cultural values in the definition of deviant behavior. Emphasizes the influence of traditional and modern society in deviant behavior.

SOCI 327

Community Development

Three Credits

The course centers on the origin and structure of communities, with emphasis on social, economic and technological forces that promote change. Decision-making mechanisms and the role of local leadership will be discussed.

SOCI 330

Marriage and Family

Three Credits

The course deals with function, patterns and role of marriage and the family. The social and personal problems of the family in a changing society will be discussed. The family's influence on the development of the personality will be included.

SOCI 345
Industrial Sociology
Three Credits

The course deals with the effects of industrialization on modern society. Topics include relationships between corporations and community, social organization of labor, and labor-management relations.

SOCI 350
Sociological Theory
Three Credits

The course covers the principal schools of thought and their major exponents. Research techniques are included.

SOCI 355
Population Problems
Three Credits

The course deals with theories of population, fertility, mortality and migration. The population problem in Puerto Rico and the world will be discussed.

SOCI 358
Social Problems of Puerto Rico
Three Credits

The course deals with social problems in contemporary Puerto Rico. Historical perspective on the problems, their causes, public and private problem-solving policies will be discussed. Topics include demographic problems, poverty, educational deprivation, crime, drugs and alcohol and the problems of victims in Puerto Rico.

FSSS 105
Freshman Seminar
Three Credits

The course centers on counseling and enabling students regarding their university life. Emphasis is on academic and personal development and forming ethical and socially responsible citizens.

SOSC 101-102
Introduction Study of Social Sciences I and II
Six Credits

The course centers on human society. Topics include the individual and his or her relationship to society, collective behavior, Puerto Rico and its relationship to the social and historical development of western civilization. Economic, psychological, sociological, anthropological and political problems of the contemporary world will also be discussed.

SOSC 320 @
Social Research Techniques
Three Credits

The course deals with research methods and techniques for the social sciences.

SOWO 200
Introduction to Social Work
Three Credits

The course will promote philosophical and practical understanding of social work services. It includes an analysis of the historical development of social work as practiced in Puerto Rico, and the characteristics that distinguish it from other professions related to social welfare.

SOWO 210
Human Behavior and Social Environment
Three Credits

The course aims to explore, the relationship between human behavior and social environment, using the social systems approach. Biological, psychological, and social factors influencing such behavior, from the individual to society's social systems, will be discussed.

SOWO 211
Human Behavior Social Environment 1
Three Credits

The course deals with the complexity of human behavior within an eco-social systems approach, taking into account the interaction of biological, psychological, social, economic, political, cultural and spiritual aspects. The course gives a multiple, mutual, and multi-directional vision of the causality of human behavior, presenting the general systems theory as it can be applied to all levels (micro, mezzo, and macro) of social systems that are subject to social work intervention. In this course special emphasis is given to the micro individual level as a social system.

SOWO 212
Human Behavior Environment 2
Three Credits

Building on the eco-social approach presented in SOWO 211, this course follows the continuum of the micro-mezzo-macro levels of intervention. The family is studied as a micro-social system; groups are studied as a mezzo-social system and communities, and organizations and societies as macro-social systems. The structural, functional, and evolutionary aspects of behavior of families and groups, within a context of human diversity, will be studied. Organizations, communities and societies will be examined from an eco-social perspective, integrating the concepts of power, oppression, discrimination, strengths, perspective, and empowerment.

SOWO 300
Social Policy
Three Credits

The course covers philosophical and historical foundations of the social welfare system. Dynamics, development and process of social policies in Puerto Rico and their connection with the local cultural, political, and economic system will be discussed.

SOWO 310**Individual Help or Casework****Three Credits**

The course deals with the skills needed to support practice with individual clients. Emphasis is placed on identification and planning for early intervention to solve individual social problems. The course also promotes the development of helpful practices for record keeping.

SOWO 311**Social Work Methodology I****Three Credits**

This course fosters the development of the skills, concepts and values needed for a general practice at all levels of intervention. The professional relationship, the social work interview and associated skills and methods are emphasized.

SOWO 312**Social Work Methodology II: Individuals and Families****Three Credits Hour**

The course covers the development of the specific skills and concepts needed for individual and family intervention. Using the problem-solving model, this course emphasizes the phases of assessment, plan of action and intervention of the general method. Intervention with families is studied, using the eco-structural model stressing the particular social problems confronted within the Puerto Rican context. The importance and skills of social work documentation are also covered.

SOWO 313**Interview and Documentation in Social Work****Three Credits Hour**

Study of purpose, components and factors of the human communication process, interview and documentation in Social Work. Development of the necessary skills to interview and document the process within the ethical standards of Social Work.

SOWO 314**Group Intervention Metodology****Three Credits Hour**

Acquire knowledge and develop skills in the generalist intervention with groups. Discussion of the theoretical and practical aspects of the group intervention method. Analysis of the fundamental principles that guide the professional Social Work intervention with groups.

SOWO 315**Community Intervention Metodology****Three Credits Hour**

The course allows the student to acquire fundamental knowledge and develop skills in a generalist intervention with communities. Discussion of the theoretical approaches and applicable models of community interventions. Discussion of the historical evolution of Community Social Work and its development in Puerto Rico.

SOWO 317**Group Dynamics****Three Credits**

The course deals with group dynamics, cohesion, structure, and emotional factors. Topics include leadership and communications. The classroom situation is used as a laboratory for the concepts studied.

SOWO 320**Social Research Techniques****Three Credits**

This course focuses on the study and application of the scientific method. It also promotes the use of social research methods for solving empirical and theoretical problems in the social sciences.

SOWO 325**Introduction to Social Gerontology****Three Credits**

The course covers physiological and psychological aspects of aging. Resources for serving the older citizen in Puerto Rico will be discussed.

SOWO 330**Seminary: Current Topics in Social Work****Three Credits**

Analysis of a diversity of current subjects applicable to the generalist practice of the Social Work profession. Discussion of themes such as cultural diversity, diasporas, alternate lifestyles, political and economic processes, postmodern human relations and their impact on the philosophy, knowledge, skills and practice of social work at the undergraduate level. Provides opportunities for students to examine and strengthen their professional and personal values prior to their admittance to Supervised Practicum (SOWO 451-452).

SOWO 327**Community Development****Three Credits**

The course deals with the origin and structure of communities, emphasizing social, economic and technological forces that promote change, decision-making mechanisms, and the role of local leadership.

SOWO 440**Seminar****Three Credits**

This is an integrative seminar which covers diverse issues, dilemmas, value conflicts, ethics, and techniques associated with the practice of social work. Analysis and oral presentation of controversial issues are presented to stimulate the development of students' analytical and creative capacity.

SOWO 441**Practicum Seminar I****Two Credits**

This seminar, which accompanies the Social Work Practicum 1, provides complementary information to the practicum course. Through class discussion, students are provided with the opportunity to apply critical thinking skills to the specific cases and the diverse populations which are confronted in the practicum experience. Using the strengths perspective, the student is encouraged to work towards the elimination of oppression and discrimination. The Generalist Method will be enriched with diverse models of intervention. The legal and ethical aspects of the profession will also be discussed, as well as specific issues relating to the practicum agencies, as they arise.

SOWO 442**Practicum Seminar II****Two Credits**

This seminar, which accompanies the Social Work Practicum 2, provides complementary information to the practicum course. The seminar emphasizes the following methodological processes: the diagnostic phase, the plan of action, and the termination of the professional relationship. The Generalist Method will be enriched with diverse models of intervention, as needed, in relationship to specific situations encountered in the practicum experience.

SOWO 450**Social Work Practice****Four Credits**

This supervised practice is an integral part of the social work curriculum. Students are asked to participate in direct service activities, providing them the opportunity to apply theoretical knowledge and skills in a reflective and self-analytical way. During the practice, students initiate their professional experience under the supervision, support, and coordination of an experienced social worker.

SOWO 451**Supervised Practice I****Four Credits**

Social Work Practicum 1 provides students with practical, hands-on experience so that they may have the opportunity to apply theories, methodologies, and skills learned in the classroom, in an ethical and responsible manner, under the supervision of an experienced professional. The student will

be expected to successfully initiate the objectives of the course as presented in the Practicum Manual.

SOWO 452**Supervised Practice II****Four Credits**

The student will continue the practical, hands-on experience in the Social Work Practicum 2 and will be expected to master and complete the objectives of the course as presented in the Practicum Manual.

STAT 300**Elements of Statistics I****Three Credits**

The course deals with statistics for the social sciences student. It includes sampling, averages, mode, median, and probability.

STAT 301**Elements of Statistics II****Three Credits**

The course deals with statistics as applied to psychology, economics, and other social sciences. Topics include probability and probability curves, games and variance, random variables, statistical inference, nonparametric tests, and correlation coefficient. Experimental design, Baye's Formula, and decision-making theory will be discussed. Multivariable and bivariable lineal analysis will also be presented.

The mission of the AHORA Program of the School of Professional Studies is to provide an accelerated educational process to adult students. The program differs from traditional methods of instruction in that professional experience of participants is incorporated into the classroom to create an interactive, challenging and dynamic environment. Faculty members have professional experience and have been specially prepared to work with adults as innovative educational facilitators. AHORA is designed exclusively for the adult student; it offers a professional environment, as well as integrated, personalized and individualized services. To fulfill this mission, the School of Professional Studies intends to:

1. Promote adults to value continuous learning and increase their contribution to the world of employment
2. Facilitate adult students reaching attaining their educational goals
3. Create a learning community that facilitates building new knowledge which is based on and is applicable to the professional and personal reality of adults
4. Provide integrated student services of quality and easy accessibility to adult students
5. Recruit and develop staff who knows and are able to meet the needs of adult students effectively
6. Integrate technology into the academic, service and administrative processes
7. Develop academic offerings that respond to the present needs of the professional and business world
8. Establish a continuous process of feedback and assessment of all the processes and services.

Description of the Accelerated Program of Studies

The AHORA Program is accelerated because all of its courses are offered in five or eight week sessions. During each session, classes meet once a week for four hours. The accelerated methodology is based on a learning process shared between the professor and the student. Each student receives a module which serves as a study guide and indicates the assignments and activities that must be completed to prepare for class. Our faculty is specially selected and trained to work with adult students through the accelerated mode, facilitating a class environment where learning is built on experiences and the assignments performed by the students. This model of accelerated studies can be applied to the different academic programs of the institution, to new academic programs or any other academic program where adult students participate. The courses are offered evenings and Saturdays (morning and afternoon). The student may take a maximum of two classes per session, completing six credits every five or eight weeks.

Registration is continuous, with courses beginning fourteen times a year, and the possibility of completing up to fifty-four credits in an academic year. This way, the program provides greater flexibility for students, since they can accelerate their academic progress or design a class program that conforms to the different commitments they may have during the year.

PROGRAMS OF STUDY

BACHELOR'S DEGREE IN PUBLIC HEALTH WITH CONCENTRATION IN HEALTH SERVICES MANAGEMENT

The graduate of this program will be a professional academically prepared to perform successfully in primary and intermediate management in health service organizations. What distinguishes these professionals are their knowledge in the field of public health, in the field of management and integration of both fields. In this way, it will ensure the fine balance between the provision of public health services and organizational and administrative health.

COURSE DESCRIPTIONS

(Courses marked with @ could be offered in both modalities, traditional or on-line.)

BUSS 230

Legal and Ethical Issues in Business

Three Credits

This course is aimed to study legal aspects of international commercial transactions; including those relating to the export, import; and transportation of finished / semi-finished products and other related manufacturing components. It will emphasize the importance of the laws applicable to the business in reference to where they are developed. The relationship between the United States of America Federal Laws, International Laws and State Laws will be discussed. The importance of Ethics, Morals and Values when doing business and any commercial trade will be discussed.

EXPL 101

Experiential Learning Workshops Assessment

Three Credits

Designed to help students assess their personal and professional experiences of learning. Integrates theorists of adult education and learning styles, accelerated learning, personal and professional planning and essential principles. Introduces tools to develop critical thinking, research and development of effective oral and written communication. Students will develop a portfolio that integrates their knowledge for personal and professional experiences.

ECON 140

Sustainable Economy

Three Credits

Introduction to the basic fundamentals of economics for the decision-making process related to sustainability, including: environment, management of natural resources and social welfare. The student will use the basic tools of economics to identify resources and face solutions to environmental problems. Qualitative and quantitative approach including the "invisible hand", success and failure of markets with particular focus on public goods, cost-benefit analysis, market valuation, incentive policies to control the environment, and renewable resources.

HESM 110

Health Services Management

Three Credits

Introduction to the fundamental concepts of management of health services facilities. Application of the administrative processes: organization, direction, control and evaluation. Emphasis is placed in public policies, health services management status, trends, organization, practices and issues relative to the delivery of health services in Puerto Rico and in the United States.

HESM 210

Health Systems & Models

Three Credits

A study of the systems, models, health policies and the infrastructure of health services in Puerto Rico and in the United States. Emphasis is placed in health reforms and its implication in the delivery of health services to the general population. Includes a review of the historical development and the future of health services.

HESM 220

Services Planning and Evaluation of Health Services

Three Credits

A study of the historical development of planning and evaluation of health services in Puerto Rico and in the United States with emphasis in its impact in organizations and in communities. Includes the theoretical foundations of planning strategies. Discusses and applies the techniques of evaluation to the health sector.

HESM 230

Basic Accounting for the Health Industry

Three Credits

A study of the social, economic, and political developments that have influenced and determined the accounting practices in the health services industry. Reviews accounting procedures and discusses their applications in the health services industry. Actual and hypothetical health services accounting problems will be discussed.

HESM 310

Economics of the Health Industry

Three Credits

A study of the modern micro and macro economy applied to health services in the public and private sectors. Emphasis is placed in the situations and issues of health economics. Discusses the relationship between the market forces of need and demand of health services.

HESM 320

Basic Finance for the Health Industry

Three Credits

A study of the financial practices of health services organizations. Also, includes the fundamental methods and techniques for financial administration in the health services industry, including fund distribution, capital management, determination and assignment of costs service rates. Case studies and applications are provided.

HESM 330

Legal Aspects in the Health Industry

Three Credits

A study of the existing legislation in health services in Puerto Rico and in the United States. Emphasis is placed in the norms that have a bearing in the health services industry. Application experiences through case studies in aspects such as: malpractice, patient rights, informed consent, doctor-

patient relationship, accidents, collective bargaining and ethical and legal issues.

HESM 340

Budgeting for the Health Industry

Three Credits

A study of budget models, including the corresponding programmatic plans, and budget distribution. Emphasis is placed in goals, objectives and measurable results. The course provides for the application of budget models and techniques to health services settings.

HESM 410

Health Information Systems

Three Credits

General introduction to the theory of information systems. The course provides for the application and use of software packages specifically designed for the health services industry for use in microcomputers and in mainframes, and for data collection, services utilization, billing, census, and others

HESM 420

Special Topics in Health Services

Three Credits

Analysis and discussion of current issues and trends in the health services industry. Emphasis is placed in critical reading and analysis of case studies.

HESM 430

Practicum in the Health Services Management

Three Credits

Application and integration to the workplace of the competencies and the concepts of health services management. The student will have the opportunity to apply the knowledge and skills acquired to a real health services setting under the supervision and guidance of a faculty member and a preceptor. The seminar session will place special attention to topics, issues and aspects relative to health services administration at the elementary and intermediate levels. A research project on a related topic is required.

HESM 431

Seminar in the Health Services Management

Three Credits

In this course the students apply the principles of personnel supervision and learn how to manage the problems associated with it in a department of a Health Care institution. It also emphasis in many issues of legal protection to the patient and to the institution that provide the health care services. In this course the student will practice in many departments of the health care institution. The practicum will be supervised by an institutional faculty member together with a certified health care administrator. The seminar sessions will place special attention to topics, issues

and aspects related to health services administration. A research project on a related topic is required.

HURM 201

Recruitment, Selection and Talent Management

Three Credits

The course covers the theories, research and legal aspects that shape the practices and trends of recruitment, selection and retention of personnel in modern organizations from a strategic perspective. Emphasis on applied learning, students will develop and apply processes and methods of recruitment and selection to meet the needs of the organization and the challenges of a diverse workforce.

HURM 210

Policy Making, Evaluation, and Reward System

Three Credits

Study of different compensation systems to attract, motivate and retain employees. Include the analysis of theories of motivation and reward, legal aspects of remuneration, classification and compensation systems, benefits and incentives, non-monetary rewards, wage structures, competency-based pay and performance evaluation. After completing the course, students will apply knowledge through case studies, research and practical exercises.

HURM 215

Human Resources Information System

Three Credits

Discussion of management and functional foundations of information systems programs for managing human resources in the organization. Analysis of the main characteristics related to applications and programs, research and evaluation needs of information systems in the human resources function. Applications and comparison of major programs, such as PeopleSoft, SAP or BAAN. The course includes the fundamental characteristics related to databases, information systems and strategic management process for the success of the organization.

HURM 240

Employment and Labor Law

Three Credits

Study of labor law from the perspective of federal and local laws in the employer-employee relationship, emphasizing the historical development and future trends in the labor market. Includes the discussion and analysis of economic, political and social impact in the workforce and work organization, the evolution of labor laws, contracts and human resources policies, human rights and anti-discriminatory laws. At the end of the course, the student will apply the knowledge acquired in the case evaluation and analysis, research and practical exercises which entails compliance with laws, rules and procedures in the management of human resources in private companies, both local and national.

HURM 250
Training, Development and Career Management
Three Credits

Study and analysis of the theoretical, conceptual and practical framework of the training and career development of human resources, and its main role in organizational strategic management. Emphasis on the needs analysis, design, development, implementation and evaluation of training programs that facilitate continuous learning in human resources and that lead to the achievement of organizational goals. Throughout the course, students will apply the processes, techniques and methods for accountability and financial return on investment (ROI) in training and development programs.

HURM 304
Human Resources Evaluation and Performance Measurement
Three Credits

The course emphasizes the role of human resources management strategic planning, performance evaluation and development of human resources. Discussion on the theories, strategies and techniques in the evaluation and performance measurement, interpretation of results and the identification of trends in the development of the organization. Through practical exercises, students will develop plans and effective tools to evaluate, analyze and report results, in quantitative terms, on the activities of human resources that contribute to the operation and success of the company.

HURM 320
Negotiation and Conflict Management
Three Credits

Principles, theories and basic practices for the effective management of negotiation, management and conflicts resolution in the business organization. Development of skills, techniques, methods and basic processes of negotiation, communication, persuasion and emotional intelligence, and the intervention of a third party to manage and resolve conflicts. At the end of the course, the student will recognize and value the role of the negotiator as a key element in resolving conflicts. Emphasis on the development of skills and conflict analysis skills, ways of tackling problems, types of negotiation, emotional intelligence, and communication strategies.

HURM 330
Safety and Health Management in Workplace
Three Credits

Introduction to the concepts and fundamentals laws of employees' safety and health at the workplace. It includes the study and analysis of the factors, risks and dangers of accidents and work-related diseases. Developing policies and practices for implementing effective security programs and occupational health. Evaluation and analysis of training programs for the development of preventive maintenance behaviors associated with occupational safety and health.

Through case studies, students will apply the knowledge, skills, legal and managerial aspects to recognize evaluate and control the risks of safety and health of workers in the company.

MGMT 101
Managerial Principles and Leadership
Three Credits

This course focuses on modern management principles and major theories and models of leadership. The student will distinguish between the concepts of management and leadership, and will expose business terminology, concepts and current business topics. The course emphasizes the development and orientation towards leadership as well as understand critical related issues. Includes the role and responsibilities of managers and leaders, decision-making at different leadership scenarios, leadership in quality and planning in strategic management.

MGMT 220
Organization and Business Behavior
Three Credits

Study of concepts, theories and practices related to individual and group behavior and their impact on the effectiveness and efficiency of the organization as a system. Analysis and evaluation of mission and vision, organizational structure and design, information and communication technology, policies and practices, power and decision-making, innovation, strategic change and learning, leadership, teamwork and diversity in the company with global focus. Upon completion of the course, the student will apply the integrated model of organizational behavior, through analysis and case assessment, scientific research and current events from a professional and ethical perspective.

MGMT 230
Human Resources Management and Handling Diversity
Three Credits

Study of models and strategies of management and human resource development from the perspective of diversity in the workplace. Analysis and evaluation of basic fundamentals in strategic planning of human resources to promote and ensure the inclusion of a diverse workforce in all aspects of organizational life. Implementation of theories and strategies of human resources linked to recruitment, selection, training and development, compensation, benefits and incentives, retention and succession of a diverse workforce, aligned to the objectives and business results, changes in the labor market, globalization and competitive advantage.

MGMT 240
Global Entrepreneurship
Three Credits

This course uses prior and new knowledge to understand how entrepreneurs generate new and innovative ideas,

products and processes at global level. The student will create and value, through innovation, national and international markets. It will explore different approaches of entrepreneurial organizations considering the skills and attributes needed to succeed in today's global competitive environment.

MGMT 250

International Business and E-Commerce

Three Credits

This course is a comprehensive introduction to international business and management of electronic commerce. Arrangement of international management and technical aspects of electronic commerce will be discussed. The student will analyze the fundamental aspects of international legal regulations, infrastructure for business transactions, the concept of e-readiness and models of e-commerce as a strategy of corporate expansion.

MGMT 431

Integral Seminar

Three Credits

Comprehensive, theoretical, conceptual and decision analysis approach from the perspective of strategic change. This course allows application of knowledge, skills and abilities acquired in previous courses in order to improve the effectiveness and efficiency of the company. Emphasis is placed on research as an essential element in a strategic context, linked to changes occurring in the economy, technology, labor, business and trends in the discipline of study. The course is based on the analysis of case studies and research from international companies.

MKTG 203

Marketing and Strategic Communications

Three Credits

This course presents strategies for integrating marketing and communications of the new century for innovative products and services to impact and attract new customers through social network, the Internet and local press. Fundamentals of brand marketing and strategic process come together in new advertising designs, responsible for maintaining the image and reputation of organizations in local and international markets. The processes of interaction with digital communications, media relations, company Web sites and video marketing will be analyzed.

ODHR 409

Consulting Management Principles of In Human Resources

Three Credits

In this course the student will integrate managerial concepts learned through his/her career education in the area of human resources. Throughout the course the student will develop a consulting strategy to improve the effectiveness of an organization. By integrating managerial concepts, the student will evaluate practices and processes that increase

productivity, effectiveness and approach from leaders towards more productive companies in the fundamental areas of human resource management.

PUHE 101

Introductions to Public Health and Health Education

Three Credits

Introduction to the different conceptions about health, as well as the basic principal education. Analysis of the relationships that exist among the 4 mayor factors that determine health. Deals with various epidemiologic concepts about health and illness, the natural history of diseases, attention and prevention levels, specific protection measures and health promotion. Emphasis is placed on existing health education models for individual and community intervention.

PUHE 201

Introduction to Biostatistics

Three Credits

Basic concepts and principles of statistics applied to life and health. Emphasis in the basic techniques used in scientific research, primarily in areas of health education and public health. Analysis of the major statistical concepts such as: the scientific method and the statistics method and others.

PUHE 203

Introductions to Epidemiology

Three Credits

Studies the occurrence, distribution and causes of diseases in communities using the epidemiologic method. The epidemiologic, as well as, the scientific method are applied to the health-illness process and its causes, particularly transmissible, chronic, mental diseases and high-risk behaviors.

PUHE 210

Biological Aspects of Human Diseases

Three Credits

Develops sound scientific attitudes, the concepts and the basic biological processes of diseases, such as: inflammation, immunological reactions, regeneration and growth control, fibrosis and necrosis using the scientific method as the tool. Pathogenesis is incorporated to the various perspectives of epidemiology and disease control as they relate to public health. Laboratory experiences promote the application of technology to the study of the principal human diseases and agents that cause them.

TECH 250

Information and Communication Technologies

Three Credits

This course presents different information systems and open source technologies to facilitate, expedite and promote the communication process, production and organization effectiveness. The student will understand the relationship between business strategies, the use of information

technologies and the advantages of sustainable competitiveness that can contribute to the organization, both in local and international markets.

The School of Public Safety (formerly known as the Institute of Public Safety, ISEP) offers academic programs designed to professionalize the personnel of public and private agencies dedicated to the safety and protection of the population. The academic programs are designed and offered from a multidisciplinary perspective, integrating various components of public safety, such as: police, corrections, emergency management, forensic sciences, among others.

MISSION

The School of Public Safety is a System-Wide Academic School at the Ana G. Mendez University System. Its mission is to broaden education opportunities in public safety with a comprehensive and uniform model that is useful to the personnel of the municipal, state, federal and private agencies as well as for the citizens of the communities it serves. ISEP promotes the professionalization of public safety personnel with the highest standards of excellence. Therefore, contributes to the social and economic development of Puerto Rico.

VISION

The School of Public Safety will be recognized as the first choice in Puerto Rico and the Caribe for the ongoing academic and professional development of public safety personnel. The School of Public Safety will excel by the high quality and constant development of its academic areas, and for the expertise and experience of their specialized instructors. The School will count with modern, safe and versatile physical facilities where personnel will be able to hone their skills with specialized equipment.

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN EMERGENCY MANAGEMENT AND DISASTER RECOVERY

The Associate Degree in Emergency Management and Disaster Recovery allows the student to develop proficiency in the immediate response to emergency situations and disasters. The degree offers courses aimed at the management and coordination of these situations as well as courses with practical exercises aimed at the development of rescue skills. Graduates can explore work alternatives in municipal and state emergency management agencies, as well as emergency brigades of private companies.

Elective Courses (3 credits)

COURSE DESCRIPTIONS

(Courses marked with @ could be offered in both modalities, traditional or on-line.)

EMDR 101

Introduction to Emergency Management Mitigation & Preparedness

Three Credits

Accidents and emergency situations have plagued man since the beginning of history and will undoubtedly occur during our conceivable future. Armed with knowledge and skills for managing such occurrences can lessen their impacts on society. This course presents the theories, principles, and approaches to emergency management. The philosophy of Comprehensive Emergency Management will be discussed with the four attendant steps of current FEMA's strategic model. Legal issues involving emergency management will be presented.

EMDR 102

Introduction to Incident Command System

Three Credits

This course introduces the Incident Command System (ICS), and provides the foundation for higher level ICS training. The course content describes the history, features and principles, and organizational structure of the Incident Command System. It also explains the relationship between ICS and the National Incident Management System (NIMS). ICS orientation is intended for personnel assigned to an incident or event who have a minimum requirement for understanding ICS. This course will review the ICS organization, the basic terminology, and common responsibilities. It will provide enough information about the ICS to enable the student to work in a support role at an incident or event, or to support an incident from an off-site location.

EMDR 201

Emergency Management Planning

Three Credits

This course introduces the basic policies, concepts, and procedures of planning and addresses the various federal and state assistance programs. Emphasis is placed on the coordination of damage assessment, preparing documentation, and recovery procedures. Students will be introduced to the emergency management planning process, planning standards, planning techniques, and the steps in the development of a basic emergency management plan, special events contingency planning, debris management plan, and its functional annexes. This course is designed for emergency management personnel who are involved in developing an effective emergency planning system.

EMDR 203

Occupational Health and Safety Regulations

Three Credits

This course offers the student with the rationale of providing an occupationally safe and healthy work environment for employees. These skills are needed to be able to work effectively in the area of human resources and employee development as well as industrial relations since law has provided workers with specific safety and health rights.

EMDR 206

Introduction Emergency Management Response & Disasters Recovery

Three Credits

This course provides an overview of hazards theory, emergency management fundamentals and the science of natural and man made hazards. Both natural and technological hazards are studied with the perspective of response and recovery focus. Some of the topics include response and recovery to earthquakes, tsunamis, volcanoes, floods, wildfires, terrorism, and hurricanes. An analysis of past disasters will be presented along with their impacts on policy formation leading up to the current FEMA all-hazards approach. The role, duties, and importance of the Emergency Manager will be discussed throughout the semester.

EMDR 240

Emergency Preparedness, Response and Planning for Hazardous Materials

Three Credits

This course utilizes a modular format where a emergency management department may analyze its current level of competency and choose course modules that will provide the skills needed by its hazardous materials team. Training includes offensive procedures for mitigation of hazardous materials spills, leaks, and exposures. Topics include chemistry, detection devices, advanced recognition and identification, pre-incident planning, incident management, scene evaluation and termination, terrorism, toxicology, medical surveillance, emergency care, PPE usage and limitations, and decontamination.

EMDR 245

Introduction to Terrorism, National Security and Weapons of Destruction

Three Credits

This course provides an introduction to the issue of weapons development proliferation, a nonproliferation around the world. We will examine the basic technologies and motivations, and impact of the development of nuclear, chemical, and biological weapons and ballistic missiles on the international security. Will discuss the various international strategies to counter weapons proliferation - treaties, multilateral conventions and informal arrangements. Examine the challenges of weapons proliferation - such as domestic safety, regional stability and security, and transnational

terrorism. This will be done through national and regional case studies - where we will discuss actual and potential US and international strategies/response to each case.

EMDR 250

Development of the Strategic Plan for Disaster Management Three Credits

This course will provide a broad introduction to the critical challenges of disaster management and policy. The central purpose of this course is to examine strategies for reducing the hazards posed by disasters. It will focus on what can be learned from the history of disasters, and on how we can apply those lessons to manage future disasters. This course is designed to student from a research or policy perspective and for those who may be charged with responsibility for on-the-scene intervention. It will conclude by examining organizational and individual behavior in high-stress situations. Throughout the semester, particular attention will be paid to how disaster management efforts can increase the vulnerability of some populations or can promote widespread resilience.

EMDR 260

Intership of Emergency Management Three Credits

This course integrates the knowledge acquisition in the Associate Degree courses. It applies the management concepts, principles and practices conducting a project within the students's specialization area. Methodology on project management, schedule of activities and task control, formal presentations and group dynamics to deal with management problems is emphasized. It includes an emergency management situation in the context of problem diagnostic and analysis, development of alternative solutions, tools development, implementation of alternatives/tools, and the evaluation of implementation. Requires 60 hours on a practice internship.

PJPS 108

Basic Ethical Values Three Credits

Study of the basic ethical values, and the importance of its application in labor scenario by security, protection and correctional officers. Discussion of applicable legislation and jurisprudence.

PJPS 112

Civil Rights and Crisis Situations Three Credits

Study of the Constitutional laws of inmates because the commission of crime in Puerto Rico. Analysis of the practices and interventions with inmates in the correccional institutions. Analysis of the standards and their accomplishment in the institutions imposel by the case of Morales Feliciano and it effects in our jurisdiction. Interates daily discussion inclass and state and federal jurisprudence.

Students will use the Commonwealth of Puerto Rico and the United States of America Constitutions.

PJPS 116

Intervention with Special Pouplations Three Credits

Study of the theoretical and practical aspects of the intervention process by security, protection and correctional officers with special population as: juveniles, elderly, domestic violence victims, ethnical groups, drunkards and individuals with mental health disease.

PJPS 120

Mediation and Intervention Three Credits

Study and critical of the mediation process as an intervention method to manage conflicts. Study of theoretical foundations, stages strategies and effective techniques management general dispatas by protection, security and correctional officers.

PJPS 124

Human And Communitary Relations Three Credits

Study of Human relations and with community to public security officers. The course is focused on the descriptions of the characteristics in the community oriented police system, their importance and applications in the actual society. Also it pretends the police engagement to work with communities, the preventive strategies development, more proactives than reactivas to deal with the criminality.

PJPS 132

Information And Communication Technologies For Public Security Officers

Two Credits

Course for the study of the evolution of human communication and application of technology of exchange information. Lays the foundation in the methods of security and protection of communications between individuals. It describes the processes of verbal and written interaction in a labaroty for the application of technology to the processes that occur in class.

PJPS 204

First Aid for Criminal Justice Officers Two Credits

Instruct students in the primary care in medical emergencies that are included in the duty of the police as first responders/rescuers. The students will learn to provide their services in scenarios that require specialized knowledge and abilities in: anatomy, physiology, the basic human body, vital signs, shock, fainting, burns, diabetes, child birth, epilepsy, and heart attacks. Through practical exercises, the management of the following emergencies will be taught: chocking, bleeding, and basic cardiopulmonary resuscitation (CPR).

PJPS 208
Physical Training and Nutrition for Criminal Justice Officers

Two Credits

The students will practice different exercise routines that permits them to perform each task, skill or function as agents of law and order. The course will emphasize will be an holistic physical development including nutritional, rest and physical exercises aspects.

PJPS 210
Integrated Seminar In Penal Law, Criminal Procedure And Evidence

Three Credits

Study of the general principles of the Penal Code of Puerto Rico, Special Penal Laws, Criminal Procedures Rules Evidence Rules that controls the juridical order in Puerto Rico. The basic as to the legal rules applicable to the minor offenses, special procedures and exception to the rules previously established. Methodology is used as the main study the analysis of case law under judicial hermeutical techniques.

PJPS 214
Crime Scene Investigation

Two Credits

The study of the history and purpose of criminal investigations and the terminology of this specialty. Provide adequate instruction in the elements, concepts and fundamental techniques in criminal investigations, such as: profile of the delinquent or criminal, emphasizing criminology, crime scene management, development of confidants and informants, and characteristics of an investigator. Practical exercises that apply the acquired knowledge will be presented.

PJPS 216
Investigation of Traffic Accidents

Two Credits

This course will discuss the duties, responsibilities, and regulations of drivers mandated by the Vehicle and Transit Law of Puerto Rico. Additionally, the student will learn how to apply and enforcement this law. Also, the student will understand the different determining factors and legal aspects of accidents in order to conduct traffic accident investigations.

PJPS 220
Transit Interventions

Two Credits

This course will discuss the Vehicle and Transit Law of Puerto Rico and its implementation and application as it relates to the duties and responsibilities of Public Order Agents/Officers while driving. The student will also learn internal protocol and operating procedures that should be followed to perform safe and effective interventions.

PJPS 224
Execution of Vehicle Operations

Two Credits

Study and practice of vehicle operation techniques in different environments and routes that protection and security officers should apply in various activities as: patrolling, tracing and intervention. The course will emphasize in motor skills development by practical drills.

PJPS 226
Management and Supervision of Inmates

Two Credits

Introductory course of inmate's supervision techniques for custody agents and correctional employees. Emphasis will be in the specific development of the communication methods that are necessary to work in the correctional institutions. The primary goals of the course are: the development of the ability to work potential dangerous environment, the implementation and follow up of direct orders, recognition of the offender's manipulation, observation methods, knowledge and corporal language implementation and how to solve daily work problem a population culturally different.

PJPS 228
Police Patrol I

Two Credits

This course discusses the beginning of the organization and structure of the agencies of law and order. It will also discuss the various methods and techniques to be used by law and order personnel. It focuses on the application of ethical, moral and legal models in the daily work of a police officer. Students will learn about the policies and regulations related to use of force and will develop an appropriated mind set. Will also learn the use of mechanical restrictions.

PJPS 229
Police Patrol II

Two Credits

Continuation study of daily transit police patrol, the difficulty to save lives in our community, and watch and secure property. Analysis of difficulties when the officer on patrol tries to maintain law and order that regulate drivers and pedestrians different types of patrol will be further examined to establish a teaching and learning process in order to develop an effective, short term and long term, operational plan that minimizes crime in society. Includes practical exercises to reinforce the patrolling skills of the public security officers.

PJPS 232**Growth and Development of Inmates in Corrections****Two Credits**

In the course will be discussed and analyzed the treatment of the inmates in the correctional system the rehabilitation strategies, the prevention models and service programs and the development related to philosophies and correctional practices. Students will focus critically in theoretical affairs, and policies related to treatment and rehabilitation programs for adults and juveniles.

PJPS 236**Use and Management of Less Lethal Weapons****Two Credits**

Study and practice of techniques and tactics in the use and manage of less lethal weapons, including their structure, components, definition and effects. Students will learn the types of less lethal weapons and their differences with firearms. Also, students will learn the importance of the responsible use of these weapons and the safety equipment required.

PJPS 238**Principles of Tactical Operations****Two Credits**

Study and practice techniques of intervention with non-compliant individuals. Students will learn team work, decision making and planning in tactical interventions as well as in high risk interventions, like armed suspects, suicide attempts, fugitives, hostages' rescue, protests. The course includes practice in entering structures, clearing the areas as well as arrests techniques.

PJPS 240**Use and Management of Firearms****Two Credits**

This course will capacitate the student to carry and manage weapon in an adequate and legal manner. Emphasis will be given to the state and federal legal regulations in the use of weapons.

PJPS 300**Tactical Planning****Three Credits**

Study of the operational and strategic plan to determine the essential resources and efficiency of the security agency. The course deals with the discussion of the effective assignment of specific tasks in each of the operational units. Emphasize the study of the responsibility and ethical and legal duties of people in charge of traffic units.

PJPS 310**Incidents Management System****Three Credits**

Discussion and analysis of the incidents management system, types of incidents and emergency situations. Study of the Unified Command System, the communications and operations levels, the strategical and operational planning for the mitigation of risks and hazards. Study of the response and recovery procedures. Study of the private sector, local government, municipality government and the federal agencies in the Incident Management System.

PJPS 400**Administration and Supervision of Crime Scene****Three Credits**

Study and critical analysis of the crime scene. Study of the theoretical fundamentals, stages in the process of intervention of the scene. Effective administrative and supervisory strategies and techniques in handling of a crime scene by officers of law and order.

PJPS 410**Criminal Intelligence****Three Credits**

Analysis and evaluation of search strategies, analysis and dissemination related to criminal activity. Study of the criminal intelligence activity to gather information gear to the execution of coordinated activities and the establishment of policies and plans to attend delinquency in all its forms. Criminal Intelligence is discussed as advanced knowledge, through information processing and its dissemination for timely decision making in the formulation of strategic intelligences planning

PSAF 133**Public Safety Communication Technology****Three Credits**

The fundamental aspects of the operation of the police communication and public security systems will be discussed, obeying the regulations, laws and policies that have been promulgated for their implementation and applicability. In addition, the student will know and identify the different techniques when using communication systems properly.

PSAF 210**Rescue on Strings, Basic Knowledge and Operations****Three Credits**

Participants will learn basic bail-out techniques in industries and in the community. The ICS (Incident Command System) will be applied to this scenario and will be trained in anchorage, knots, mooring and patient hauling. This course is derived from NFPA 1006 (Standard for Rescue Technician Professional Qualifications).

PSAF 211**Rescue in Technical Strings****Three Credits**

Participants will learn advanced techniques in String Rescue at more pronounced angles in the industrial setting and community. When the participant completes this course, he / she meets the requirements to be certified as a Professional Rescue Technician in accordance with NFPA 1006, "Standard for Rescue Technician Professional Qualifications", Chapter 6.

PSAF 212**Rescue in Confined Spaces****Three Credits**

This course is based on the standards of NFPA 1006 "Standard for Technical Rescue Personnel" Chapter 9 and OSHA "Permit-Required Confined Space for General Industry". Participants will acquire knowledge for incident response in confined spaces and qualify for NFPA 1006 Confined Space Professional Rescue Technician.

PSAF 213**Rescue in Trenches****Three Credits**

This course is based on NFPA 1006 Standard for Technical Rescue Personnel and OSHA. Participants will acquire knowledge for the response to incidents in constructions and excavations, focused on Rescue in Trincheras. Also included in this course is Incident Command System for Trench Rescue.

PSAF 221**Aquatic Rescue****Three Credits**

This course is designed to provide participants with the knowledge and technical skills to operate as responders in floods, streams, rivers, rapids and other bodies of water. This course complies with NFPA 1006 (National Fire Protection Association) chapters 11 "Surface Water Rescue" and "12 Swift Water Rescue".

PSAF 222**Technical Rescue in Collapse Structures I****Three Credits**

During this course participants will learn techniques and skills to perform rescues in scenes of structural collapse either by natural disaster or incidents of terrorism. This course, besides being created for the Associate Degree in Emergency Management, can be directed to Firefighters, Paramedics, Industries, Police, WMD Technicians and National Guard.

VISION

The vision of the School of Technical Studies (STS) is to make the Universidad Ana G. Méndez-Recinto de Gurabo System (SUAGM) the first choice and the model for technology education. The STS will become an important component of support to strengthen the undergraduate enrollment at SUAGM and its institutions.

MISSION

Promote the academic, professional and technical excellence of a diverse population through specialized and innovative technical-vocational programs that allow graduates to move in the working world in a fast and successful way contributing to the economic development of the country.

OBJECTIVES

In order to accomplish our mission, the School must comply with the following objectives:

1. Provide technical education that will respond to the present and future demands of the employment markets.
2. Train and develop in the students the skills and knowledge related to their profession, in accordance with the demands of the human resources of the community we serve.
3. Provide support services that will facilitate student retention in the program and that will contribute to academic and professional success.
4. Develop in the students the necessary skills and attitudes needed in the use of learning resources, including recent developments in the area of educational technology.
5. Provide students with real life laboratory experiences, so that they will familiarize themselves with the nature of their future job.
6. Develop students' competence in small business management, so that they are prepared to create employment for themselves as well as for other persons.
7. Incorporate emergent technologies in technical studies programs, according to the available resources.
8. Offer technical programs at the off-campus centers that will respond to the necessities of the geographic zone and communities they serve.

Important note:

The institution provides practicum sites for students of this program. Availability in each academic period will be subject to the space provided by practicum centers. Practicum center may be located in different geographic areas through PR.

PROGRAMS OF STUDY

ASSOCIATE DEGREE IN RESPIRATORY THERAPY

The Associate Degree in Respiratory Therapy prepares students to be skilled in assisting in the diagnosis, treatment, management, control, rehabilitation and preventive care of patients with cardiopulmonary problems.

PREA 144	Administration of Educational Program for Infants, Toddlers and Preschool Children	3
PREA 166	Childcare in Preschool Education	3

COURSE DESCRIPTIONS

COAT 107

Keyboarding and Basic Skills in The Computer Three Credits

The course content includes an introduction to technology in personal computers, applications and ethics in the use of computers. Students get direct experience with operating systems of computers and solve problems through practice with immediate applications of Word, Excel and Power Point. This course requires additional 45 hours in an open laboratory.

CTMA 110

Therapeutic Massage Clinic Three Credits

This is an introductory course that gives students knowledge about the history and origin of massage. Aspects studied: professional, ethical and legal and hygiene, cleanliness and safety in the massage room. In addition, it studies the types of clients, technical consultation, preparation of environment with the team and best used with its general effects and contraindications products.

CTMA 120

Human Anatomy and Physiology of Massage Three Credits

This course trains students in the basics related to human anatomy and physiology, the organization of a chemical level body structure, cell, tissues, organs and regulatory systems and body rhythms. The structures and functions of the skeletal, nervous, muscular and endocrine systems are integrated.

CTMA 130

Reflexology Three Credits

This course enables the student to provide manual stimulation in so-called points and reflexes (feet and hands) areas to bring an action in organs, tissues and conditions to improve our conditions.

CTMA 125

Swedish Massage Three Credits

This course trains students in the techniques and skills by making seven (7) manipulations: stretching, kneading, friction, percussion, vibration, rubs, rubbing, causing the customer the feeling of relaxation and strengthening muscles and joints.

CTMA 135
SPA TECHNIQUES AND HYDROTHERAPY
Three Credits

In this course SPA concepts, techniques and more frequent body treatments are known. It presents the therapeutic values of hydrotherapy and different modalities used in physical conditions. It includes indications, precautions and contraindications as well as the physiological effects of various forms of application.

CTMA 140
Clinical Pathology and Pharmacology Massage
Three Credits

This course prepares students with the knowledge of diseases, conditions or injuries suffered by the human body. The student will acquire the skills to identify possible interactions or adverse reactions produced by drugs.

CTMA 145
LYMPHATIC DRAINAGE
Three Credits

This course prepares students in basic knowledge of the lymphatic system, its functions and technical mastery in the lymphatic massage. Moreover, they will know about benefits and contraindications and impact on the health of the individual.

CTMA 200
Craniosacral Therapy
Three Credits

This course prepares the student to feel and touch the cranial rhythmic movements, using basic techniques for treating conditions most common as well as their benefits and contraindications.

CTMA 201
Sports Massage
Three Credits

This course provides students with the skills to offer sports therapy at both training and competition, serving as a means to help athlete to achieve an optimal level.

CTMA 202
Eastern Massage Techniques
Three Credits

This course trains students in different stretching techniques on joints, acupressure skills energy points and benefits and contraindications. Develops student skills in handling applied from the toes to the head.

CTMA 203
Clinical Massage Techniques
Three Credits

This course trains students in various techniques to treat myofascial trigger points and small muscle contractions that

will identify through palpation analysis of posture and active and passive movement of the patient.

CTMA 205
Massage Special Populations
Three Credits

This course develops in students the methods and techniques to deliver the right massage for pregnant women, children, elderly and people with disability can be useful so helping to eliminate fatigue caused by waste products from your muscles.

CTMA 206
Structural Kinesiology and Technical Clinic Evaluation
Three Credits

This course enables the student to deepen and take the theoretical basis to apply Kinesiology in dynamic and practical way. In turn, integrates most effective in achieving a rebalancing of the body in manual therapy based on clinical evaluation measures.

CTMA 207
Integration Seminar Massage Therapist
Three Credits

In this course students will review all the theoretical and practical concepts needed to take the test and get Revalidation License Massage Therapist in Puerto Rico. It will focus on the different types of the massage, manipulative techniques, benefits, contraindications and protocols for performing the massage.

CTMA 208
Clinical Experience
Three Credits

This course provides students the opportunity to apply knowledge, skills and attitudes acquired through its development program Technician Massage Therapy Clinic. This seminar will take place in a real scenario and under the direct supervision of a licensed professor in Massage Therapist. The student will apply various therapies to the university community, faculty, students and administrators.

FSET 100
Freshman Seminar
Three Credits

This course aims to strengthen the knowledge and basic skills at the personal, intellectual and technological necessary for effective performance in activities that lead to academic performance and adjustment to college life. Students will participate in mentoring activities aimed at the acquisition of skills and knowledge that will allow its development in the academic area. The importance of comprehensive development of man and its relationship to academic success. The student is guided through a series of activities on campus to expose the services offered by our institution and the School of Professional Technicians. It is intended

that students develop greater security and confidence to manage and resolve academic and personal situations.

OSMB 100

Keyboard and Computer Basics

Three Credits

Medical Terminology course is designed for students to know and learn the terms and procedures used in a medical facility. In addition, students will learn medical vocabulary and their meanings.

OSMB 101

Accounting for Medical Billing

Three Credits

This course prepares the student to know the basics of accounting that allows its application by analyzing financial reports.

OSMB 102

Billing

Three Credits

This course will develop in students the skills and abilities to process bills of health services.

OSMB 103

Coding

Three Credits

The Coding course includes the study of the nomenclature of diseases and health conditions, as well as an introduction to ICD 10, development and presentation of the structures, organization and implementation of the same. It is also studying medical procedures CPT4 aligning each diagnosis and the procedure performed, while guidance in Puerto Rico medical plans will apply.

OSMB 104

Billing Audit

Three Credits

This course is designed for students to check invoices, identify the most common mistakes and determine the reason for its refusal. Measurement income received by receiving and losses incurred in the billing process.

OSMB 105

Legal and Administrative Procedures

Three Credits

This course studied the legal dispositions applicable to administrative processes to the health services and the claims.

OSMB 106

Electronic Billing

Three Credits

This course prepares students in the use and management of electronic billing program. The student will be able to work the full cycle of electronic invoicing.

OSMB 107

Electronic Medical Record

Three Credits

This course prepares students in the use and management of electronic records and the use of electronic billing program enabling it to work on full cycle of electronic health information.

OSMB 108

Integrated Applications

Three Credits

In this course Microsoft Office programs are integrated. These are: Word, Excel, PowerPoint, Access and Outlook. The student will apply the acquired knowledge previously in Microsoft Office courses. You use internet options and mail to integrate documents. It will create different documents in which apply critical thinking to solve problems.

OSMB 109

Introduction to Database Management

Three Credits

This course is designed to enable the students to develop the techniques and skills necessary for the analysis and design of the database.

OSMB 110

Introduction to Office System Technology

Three Credits

This course is designed to enable the student to develop skills for the use and management of technological tools holistically.

OSMB 111

Medical Transcription

Three Credits

This course is designed to enable students to develop the skill to transcribe medical information by using dictation machine transcription to produce medical reports.

OSMB 112

Supervised Practice

Three Credits

The course offers the student the opportunity to apply the knowledges already acquired in the academic program, in a real work environment. The student will assist 4 days in the week to the practice center and his or her performance will be evaluated by the assigned supervisor in the practice center. One day of the week, the student will meet with the practice coordinator to discuss the work done, performance

and experiences and to identify any areas that needed reinforcement.

PATH 103
Pharmaceutical Calculations I
Three Credits

This course prepares students to recognize the basic concepts of a prescription or medical order. Emphasizes pharmaceutical medical systems calculations, conversions, ratio and proportion.

PATH 104
Pharmaceutical Calculations II
Three Credits

This course prepares students to solve mathematical problems for filling a prescription. Emphasizes analysis, decision making and implementation of the ratio and proportion methods, dilution, concentration and flow rate calculated.

PATH 117
Pharmacy Introduction
Two Credits

Study of the origin and evolution of pharmacy. It includes discussion of basic concepts and terminology of the occupation of pharmacy technician. Emphasis on prescription and important abbreviations used in the prescription and its meaning, as well as procedures for handling and shipping thereof. Includes presentation forms of medicine, common synonyms and other preparations.

PATH 122
Pharmacognosy
Three Credits

Study of drugs derived from natural products of plant, animal and mineral extraction and purification methods, chemical composition, therapeutic use and effects on the body. Includes drugs obtained by biosynthesis in pharmaceutical and medicinal plants from Puerto Rico.

PATH 206
Drugs over the Counter
Three Credits

Discuss drugs available without a medical prescription, over the counter medicines, which are used in the prevention or treatment of the most common conditions affecting humans. The use of equipment, devices and common accessories available for sale in community pharmacies that are used for testing or monitoring of some common medical conditions or treatments. Includes a section on homeopathy because of the boom that it has acquired in recent years.

PATH 220
Dosage
Three Credits

Provides the necessary tools to introduce students to the fundamental concepts of the pharmacy related to the administration of medications and dosage forms for adult, pediatric. Includes equivalents and calculation of parenteral and insulin dose. Study of different routes of administration, special design features and management with its use.

PATH 224
Pharmacy Practice Laboratory
Three Credits

Practical Study of Pharmacy Technician functions related to the supply of medicinal products. Development of skills in the use and handling of equipment and books required by law. Analysis of the recipe for release from the interpretation, product selection, extemporaneous preparations, labeling and packaging. Includes responsibilities Pharmacy Technician in the hospital environment with emphasis on the most common drugs used in the hospital, techniques and sterile preparations and preventive measures to avoid errors in the process of preparation of a medicinal product.

PATH 225
Internship I
Six Credits

Integration of knowledge and skills acquired in a real scenario that facilitate the development and strengthening internal core competencies to serve as a Pharmacy Technician future. The internship takes place in a community pharmacy, chain or institutional or a combination of these and it will be supervised by a licensed pharmacist duly authorized by the Pharmacy Examining Board, as stipulated in the Law # 247 Pharmacy Act Puerto Rico. Total hours required during the period is 500 hours.

PATH 226
Internship II
Six Credits

Integration of knowledge and skills acquired in a real scenario that facilitate the development and strengthening internal core competencies to serve as a Pharmacy Technician future. The internship takes place in a community pharmacy, chain or institutional or a combination of these and it will be supervised by a licensed pharmacist duly authorized by the Pharmacy Examining Board, as stipulated in the Law # 247 Puerto Rico Pharmacy Act. Total hours required during the period is 500 hours to complete the 1,000 hours required by the Pharmacy Examining Board as established by law and thus complete the requirements to be eligible for revalidation of Pharmacy Technician.

PATH 227**Pharmaceutical Chemistry****Three Credits**

Study of the basic concepts of composition, structure, properties and behavior of matter. Emphasis on pharmaceutical chemicals serving in the daily life of human beings.

PATH 228**Administration, Communication and Customer Service****Three Credits**

It presents the basics of effective communication of verbal and written form, and the correct way to establish a cordial relationship between the Technician Pharmacy and the patient, as with coworkers. Familiarizes students with issues of self-esteem, personality, human relations, search employment and interview.

PATH 229**Pharmacotherapy I****Three Credits**

Study of the various systems and organs of the human body from structurally and functionally. It presents fundamental concepts of structure and functioning of the human body, the conditions and treatment of the integumentary, musculoskeletal and nervous and respiratory system. Emphasis in the treatment of conditions that affect the various body systems and increased use of drugs belonging to different categories based on clinical application. Including contraindications, precautions, warnings, interactions, dosage and side effects of drugs.

PATH 230**Pharmacotherapy II****Three Credits**

Study of the various systems and organs of the human body from structurally and functionally. It presents fundamental concepts of structure and functioning of the human body, the conditions and treatment of the endocrine, circulatory, respiratory, digestive, urinary and reproductive systems. Emphasis in the treatment of conditions that affect the various body systems and increased use of drugs belonging to different categories based on their clinical application. Including contraindications, precautions, warnings, interactions, dosage and side effects of drugs.

PATH 231**Pharmaceutical Legislation****Three Credits**

Study of state and federal laws governing research, development, manufacturing, packaging, marketing, sale and distribution of drugs and devices medical. Emphasis on the laws governing the exercise of the profession of pharmacy as well as of Pharmacy Technicians. It includes

procedures for the organization a pharmacy and physics; requirements, equipment, licenses and permits.

PREA 102**Health, Hygiene and Nutrition****Three Credits**

Study of health and safety procedures in a preschool educational environment, guided by standards of performance of preschool programs at the state and federal level. Will health procedures: diaper change, brushing teeth, washing of hands; safety procedures such as: fire, earthquake drills and shooting.

PREA 107**Teaching Reading and Writing****Three Credits**

Study and analysis of the theory and practice used in the teaching of reading and writing at the preschool level. Emphasis on the development of teaching techniques and strategies used to stimulate the development of the literacy in preschool children. Includes exposure of literacy strategies to promote a natural according to developmentally appropriate practices.

PREA 114**The Use of Computer in Education****Three Credits**

The course of the computer in education is directed to aspects related to the evolution and impact of the computer in education and the theories that support the integration into the educational field. Constructive methodology will be used to refine the humanist-skills related to the development of thinking skills and solution of problems in the educational environment where children and educators become familiar with computer programs from a practical perspective.

PREA 119**Theory, Practices and Assessment of the Game as a Strategy of Education****Three Credits**

Study, practice and evaluation of theories and uses of the game in the early childhood education. It will discuss issues such as the role of play in the development of the whole child, representation of reality, purpose, types of games, evaluation, standards, rules to follow, technical assessment and adaptation to a child with a disability.

PREA 122**Speech Development and Correction of Language****Three Credits**

The course allows the future Wizard of preschool teacher know the language development in early childhood (0 to 5 years). Consideration will be given to the stages of language development, the needs of the children and the theories related to the development of language.

PREA 123**Children's Literature****Three Credits**

This course offers the Future Teacher Assistant Preschool the theoretical and practical form of the most essential of children's literature in early childhood. The Wizard of Preschool Teacher must possess broad knowledge of literature and the methodology needed to awaken in the child the taste for literature. Will be considered works of art, fiction, folklore, poetry, short stories, and games with an emphasis on creativity.

PREA 135**Introduction to Education****Three Credits**

This course is based on the constructiveness paradigm. It provides the future preschool teacher assistant with the conceptualization of goals and the evaluation of their strengths and weaknesses, in light of the competencies pertinent to their training as an education professional. During this experience, special attention will be given to the observation and analysis of the educational environment, as well as to the teaching and learning processes. The course involves 15 hours of clinical experiences in preschools. The student becomes an active thinking subject capable of building his own knowledge.

PREA 136**Curriculum and Teaching Methods****Three Credits**

This course examines all aspects of the integral development of the preschool child. Includes philosophy, theories, methods, curriculum models, strategies and techniques in the teaching-learning process.

PREA 139**Education for Exceptional Children****Three Credits**

Study nature and needs of infants and toddlers with disabilities. We discuss the criteria to determine the concepts and high risk factors with emphasis on the assessment and diagnosis, teaching, techniques and adaptation strategies and intervention with young children with developmental disabilities.

PREA 143**Practical Experiences at Preschool Level for Teachers Assistants****Three Credits**

This course of clinical experience is aimed at Preschool Teacher Assistants. It is a clinical experience in which the student assistant preschool teacher puts into practice the knowledge, skills, competencies and attitudes acquired in the preparatory courses. The teacher-student taught the teaching-learning process to a group of children at the preschool level. Entails 20 hours and 25 hours for supervisory visits.

PREA 144**Administration of Educational Program for Infants, Toddlers and Preschool Children****Three Credits**

Study and analysis of the knowledge and skills required in the planning, management and coordination of programs for infants, maternal and children little ones. We discuss topics such as: different types of programs, planning and evaluation of goals, selection and supervisions of human resources, use and maintenance of facilities and physical resources, the role of parents in the education of maternal infant or toddler, government agencies regulation programs and preschool facilities and regulations.

PREA 166**Childcare in Preschool Education****Three Credits**

This course will provide the student strategies to actively participate in physical, emotional and cognitive development of children in preschool age. Include aspects such as relationships with others (socialization), health, nutrition and safe environment in preschool programs.

PREA 171**Human Growth and Development****Three Credits**

Study of the scientific and psychological that describe the growth and development of the early childhood and its implications for the teacher and the school. We study the processes that occur in the human being from the moment of conception and at all stages of development.

PREA 172**Educational Psychology****Three Credits**

This course provides an overview of the concepts learning and intelligence and its relationship to human development. The theoretical framework related to learning, intelligence and different learning styles under review.

PREA 176**Management of Classroom****Three Credits**

In this course students will study the theories and models of classroom management. It will discuss the strategies for the control of groups and behavior modification.

PREA 202**Preparation of Material Devices****Three Credits**

Laboratory course that combines graphic processes and instructional design for educational purposes. The techniques use to integrate media in education are discussed. Students will develop materials taking into account the principles of communication, proper design and effective and the use and evaluation of these materials.

RESP 100**Introduction to Respiratory Care****Three Credits**

This course introduces students to the medical discipline of respiratory care. Specifically addresses the historical, quality, ethics, security, communication and professional organization of the discipline. It enters in to the topic of oxygen administration and the techniques used for this purpose. Briefly describes the topics included within the field of respiratory care.

RESP 101**Cardiopulmonary Anatomy and Physiology****Three Credits**

Course leading to develop in students the knowledge of anatomy and physiology of the cardiopulmonary system and the different organs and functions of this system. After completing this course the student will be able to recognize and describe the organs that make up the cardiopulmonary system, and identify the physiological processes carried out by the organs of the cardiopulmonary system.

RESP 102**Principles of Respiratory Therapy****Three Credits**

Develop primary knowledge of respiratory therapy and its history. Development and application of basic skills for adequate assessment of patients. Know the proper handling of humidity therapy, aerosol and oxygen in routine situations and / or emergencies.

RESP 202**Cardiopulmonary Pathophysiology****Three Credits**

Recognition, diagnosis and management of cardio-respiratory conditions. Development of different techniques: diagnosis, recognition skills and therapeutic applications in the different conditions presented. Assess the patient according to diagnostic measures studied.

RESP 203**Respiratory Therapy Pharmacology****Three Credits**

Course designed to train students in basic principles of pharmacology based on the treatment and management of cardio-respiratory conditions. Knowledge of proper use and indicated bronchia dilatator drugs, anti-inflammatories, antibiotics, prophylactic drugs, analgesics and anti-arrhythmic drugs.

RESP 204**Respiratory Management****Three Credits**

This course is designed to train students in therapeutic treatments hyperinflation therapy, chest physiotherapy and airway management of natural and artificial. Procedures of extubating patients. Understand and apply the techniques of hyperinflation therapy. Know and apply the techniques of chest physical therapy. Understand and apply management techniques natural and artificial airways.

RESP 205**Diagnostic Evaluation in Respiratory Care****Three Credits**

This course provides relevant information related to the knowledge and skills that are necessary for the respiratory therapist is competent in the diagnostic evaluation of the patient. Included in some detail the basic principles of history and physical exam skills including obtaining vital signs, and the rationale and interpretation of diagnostic tests for blood gases, chest X-rays and other images, flexible bronchoscopy, monitoring cardiac output, the nutritional assessments, breathing patterns and documentation of the diagnostic evaluation.

RESP 206**Sample of Blood Gases and Function****Two Credits**

This course is designed in the evaluation, implementation, management and interpretation of arterial blood gas sample and simple pulmonary function tests. Evaluate and make pulmonary function tests. Perform various tests to measure lung function. Suggest additional pulmonary function tests and / or specialized for specific cases. Take, analyze and interpret blood tests for blood gases. Suggest oxygenation changes respiratory treatment based on blood gas results.

RESP 207**Mechanical Ventilation****Three Credits**

Course designed to train students in basic and advanced principles of mechanical ventilation. Identifying the issues concerning the initiation, monitoring and weaning of adult patients on mechanical ventilation and noninvasive.

RESP 208**Neonatal and Pediatric Patient Management****Three Credits**

This course is designed for students to study the evaluation and implementation of pediatric and neonatal respiratory care, emphasizing the management of cardio-respiratory conditions. In addition to situations that lead to patient mechanic ventilation. Evaluate basic and advanced pediatric and neonatal patients. Recognizing the diagnosis and treatment of cardiopulmonary conditions more common in pediatric and neonatal. Start, change parameters and/or

weaning pediatric and neonatal patients off mechanical ventilation.

RESP 209

Practicum

Four Credits

This course is designed for the student evaluates and intervenes with adult, pediatric and neonatal hospital in a real clinical setting. It can apply the knowledge gained in therapeutic and diagnostic procedures, including airway management, CPR, oxygen, aerosol therapy. Development of clinical and practical knowledge of the student, including general adult care, pediatric and neonatal. Integrate the principles of cognitive, affective and psychomotor skills in patient care situations. Adequate use and proper application of basic equipment and advanced respiratory patterns. The clinical portion of the course will consist of 15 hours per week for the duration of these 15 weeks making a total of 225 hours.

RESP 210

Knowledge Integration in Respiratory Therapy

Three Credits

This course is a review of all concepts and practices studied in the Respiratory Care Program with the intention of providing the necessary integration with a view to taking the examinations for licensing and accreditation.

SBAA 200

Administración de Pequeños Negocios

Three Credits

This course trains students in basic principles for establishing, managing and developing a small business in Puerto Rico as well as develop skills and business skills emphasizing the requirements of law, permits and government support.

**Appendix A
Satisfactory Academic Progress Tables**

Associate's Degree Programs		
Credits Attempted	% of Credits Earned	GPA
1 – 28	57%	1.70
29 – 56	62%	1.85
57 +	67%	2.00
